

small_CLD / homoscedastic / balanced

rho = (0, 0)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, -0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / homoscedastic / moderately unbalanced

$\rho = (0, 0)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, -0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, 0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / homoscedastic / highly unbalanced

rho = (0, 0)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, -0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / heteroscedastic / balanced

$\rho = (0, 0)$

Relative likelihood (log10 scale)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

Relative likelihood (log10 scale)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / heteroscedastic / moderately unbalanced

rho = (0, 0)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, -0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / heteroscedastic / highly unbalanced

rho = (0, 0)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, -0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / homoscedastic / balanced

$\rho = (0, 0)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, -0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, 0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / homoscedastic / moderately unbalanced

$\rho = (0, 0)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / homoscedastic / highly unbalanced

$\rho = (0, 0)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

ρ

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / heteroscedastic / balanced

rho = (0, 0)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, -0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / heteroscedastic / moderately unbalanced

rho = (0, 0)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, -0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

rho = (-0.8, 0.8)

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / heteroscedastic / highly unbalanced

$\rho = (0, 0)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, -0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (-0.8, 0.8)$

Y-axis is $E[L] / \max E[L]$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).
