Monte Carlo law of the estimates: 50 quantile dots

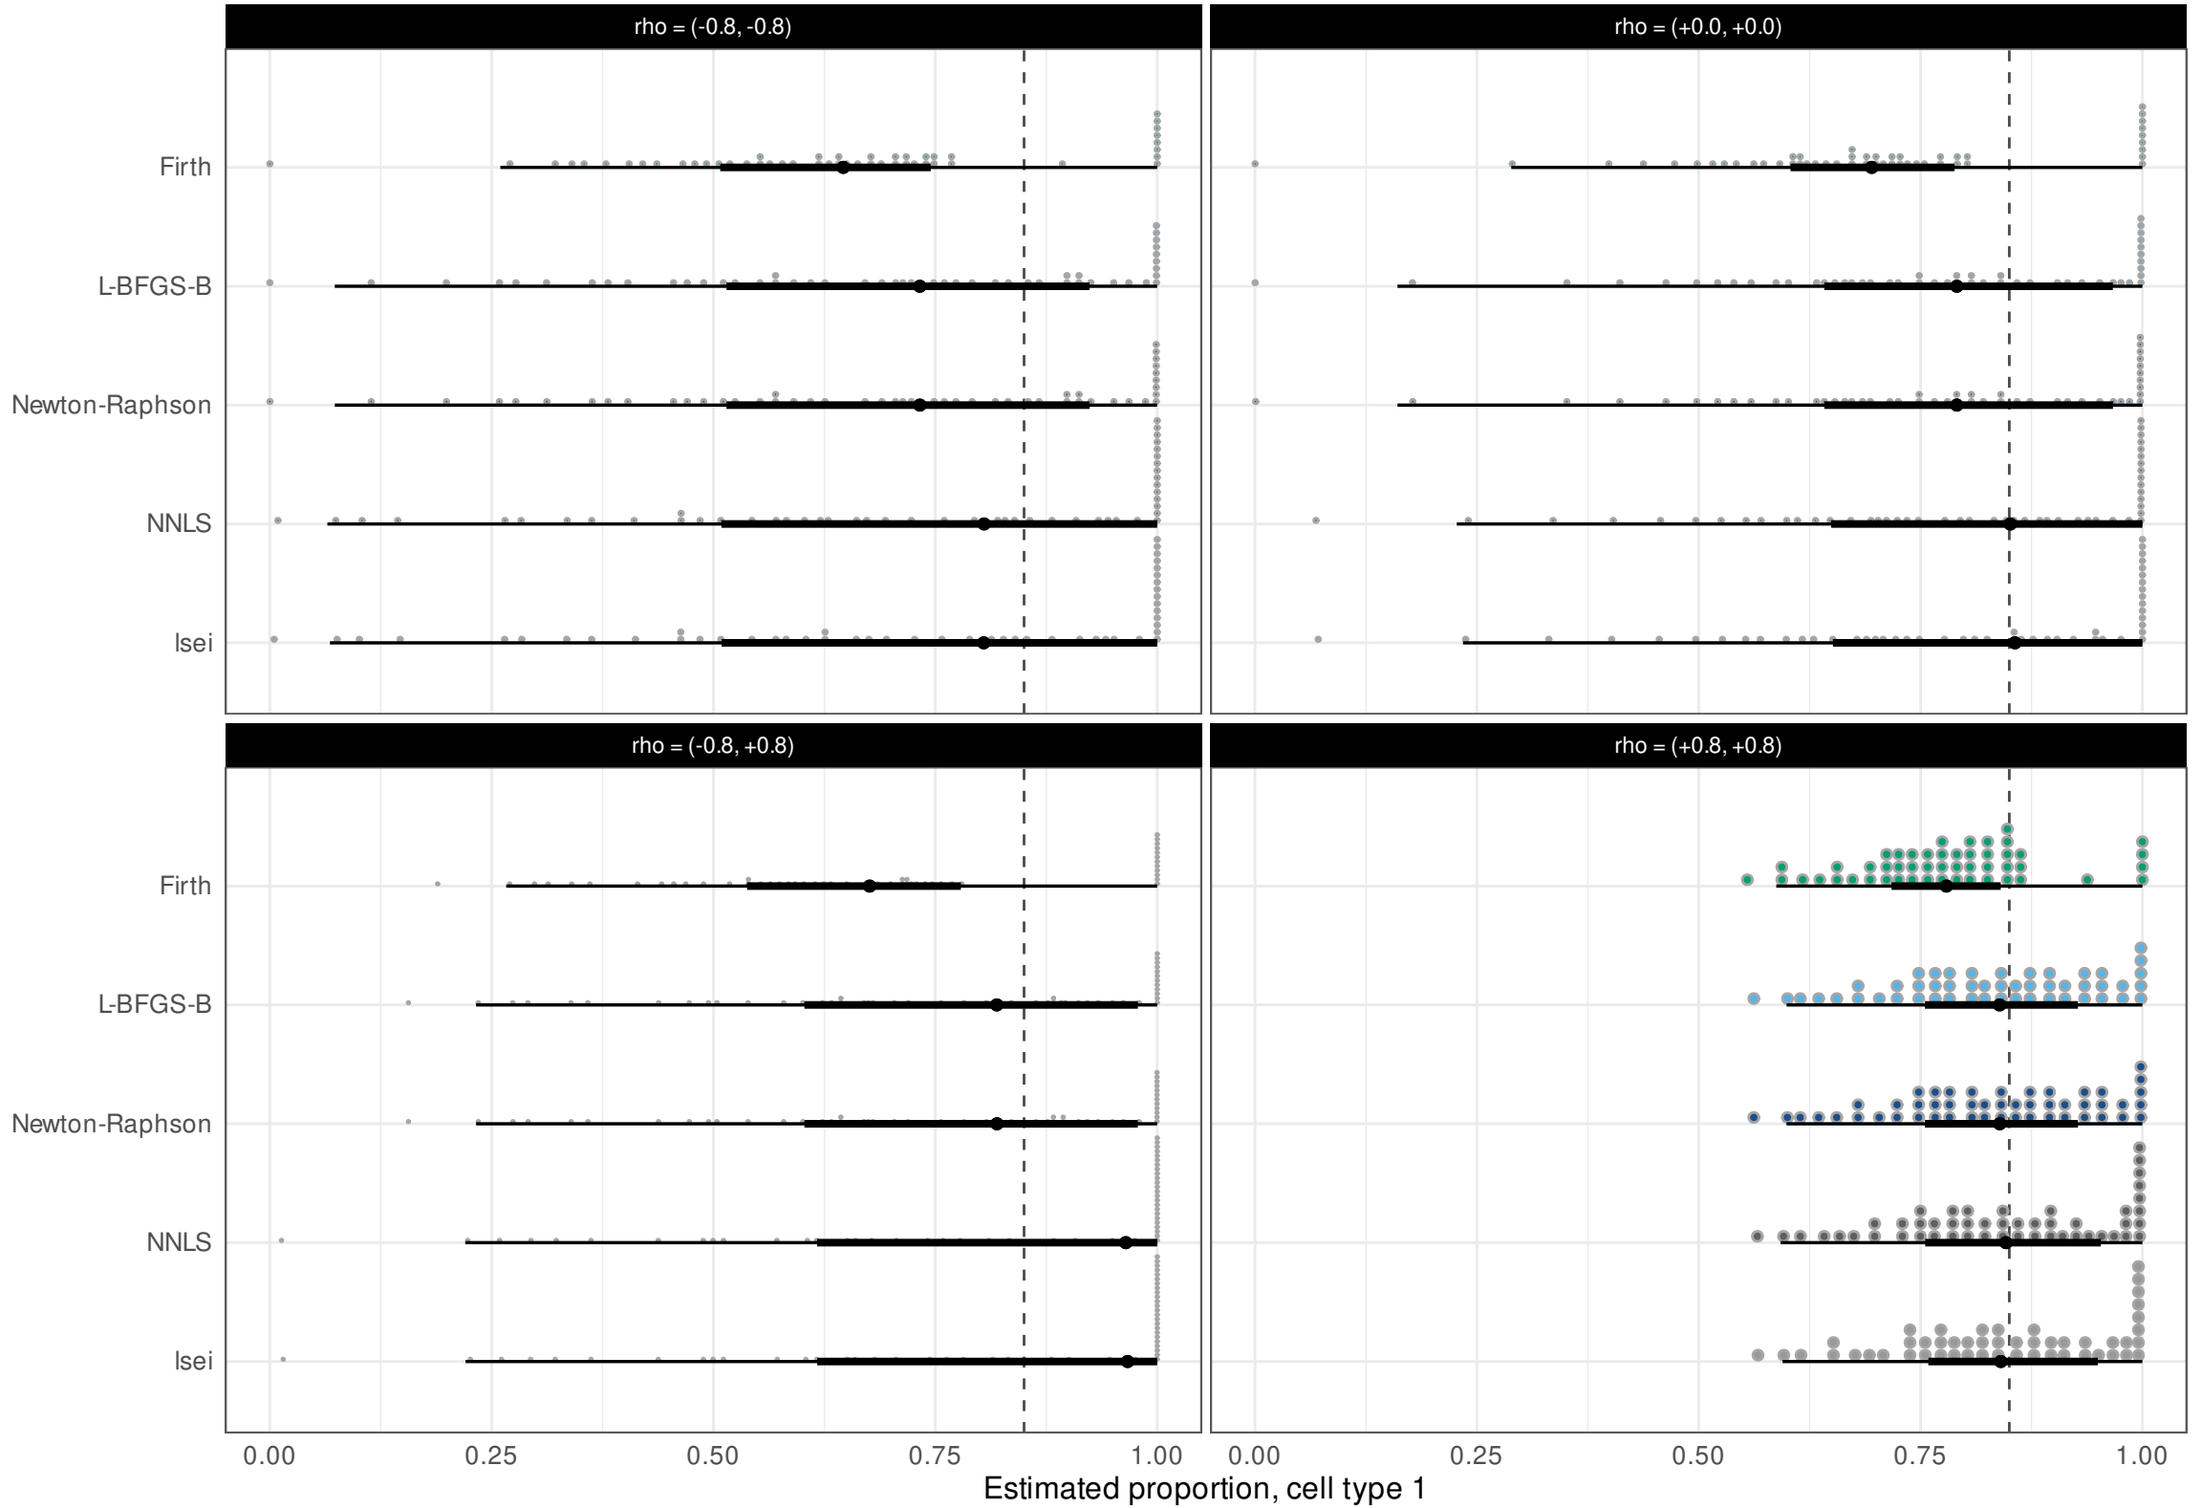

small centroid gap / homoscedastic / balanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

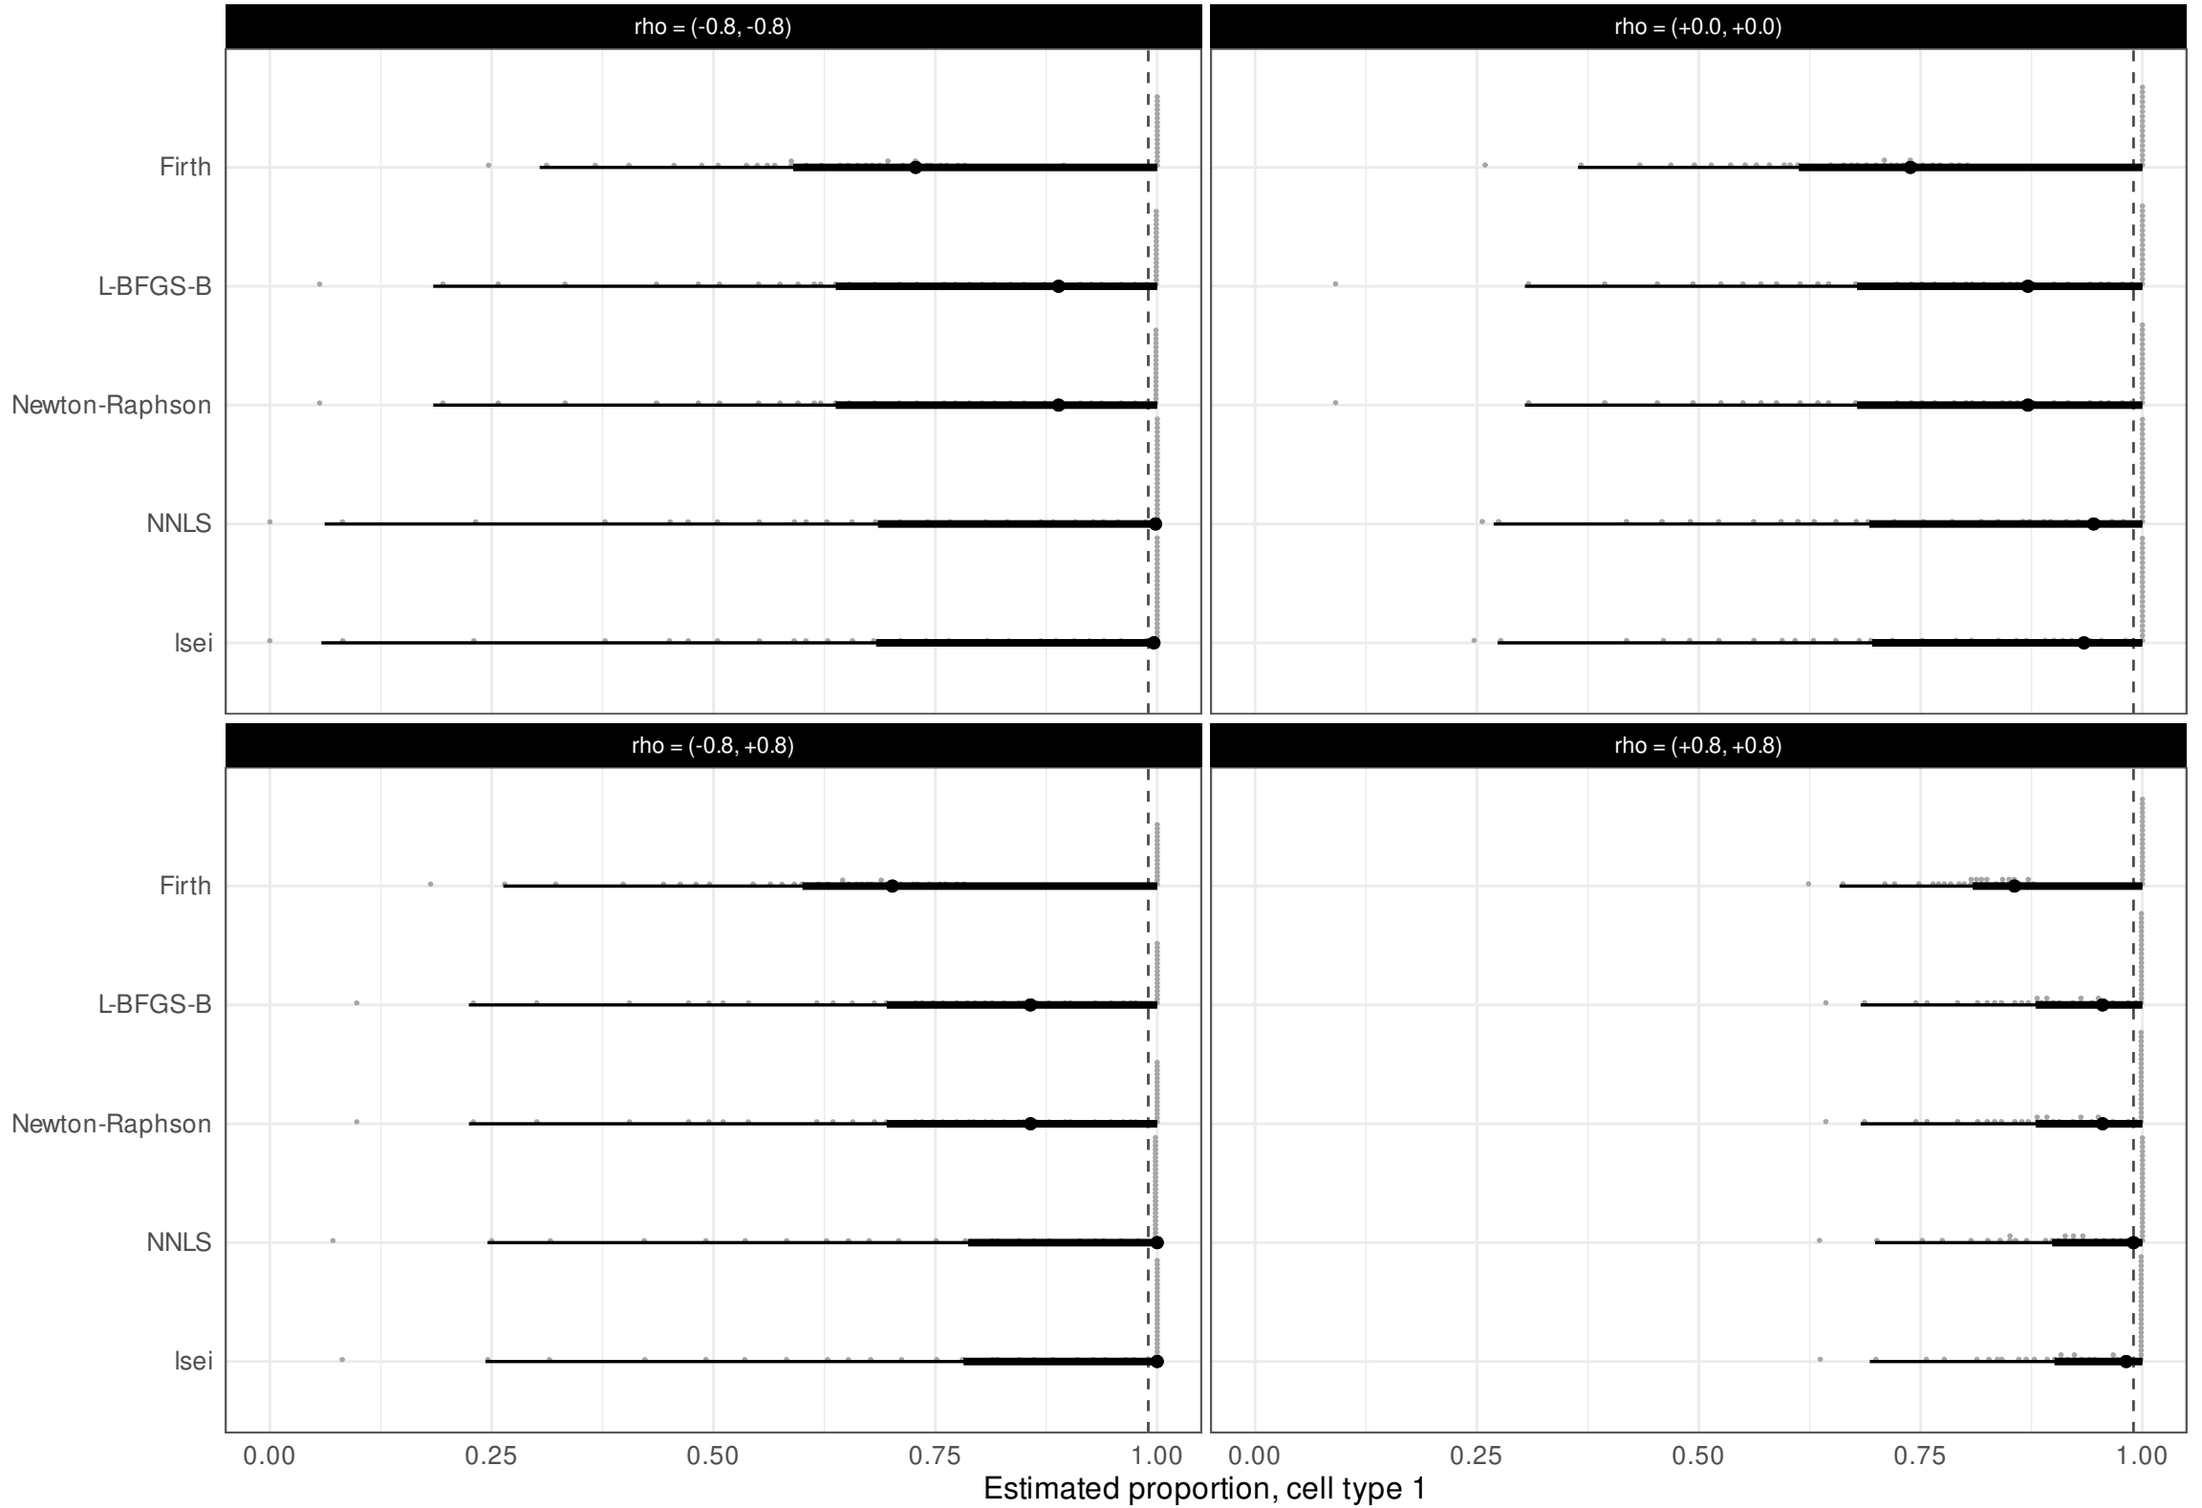

small centroid gap / homoscedastic / moderately unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

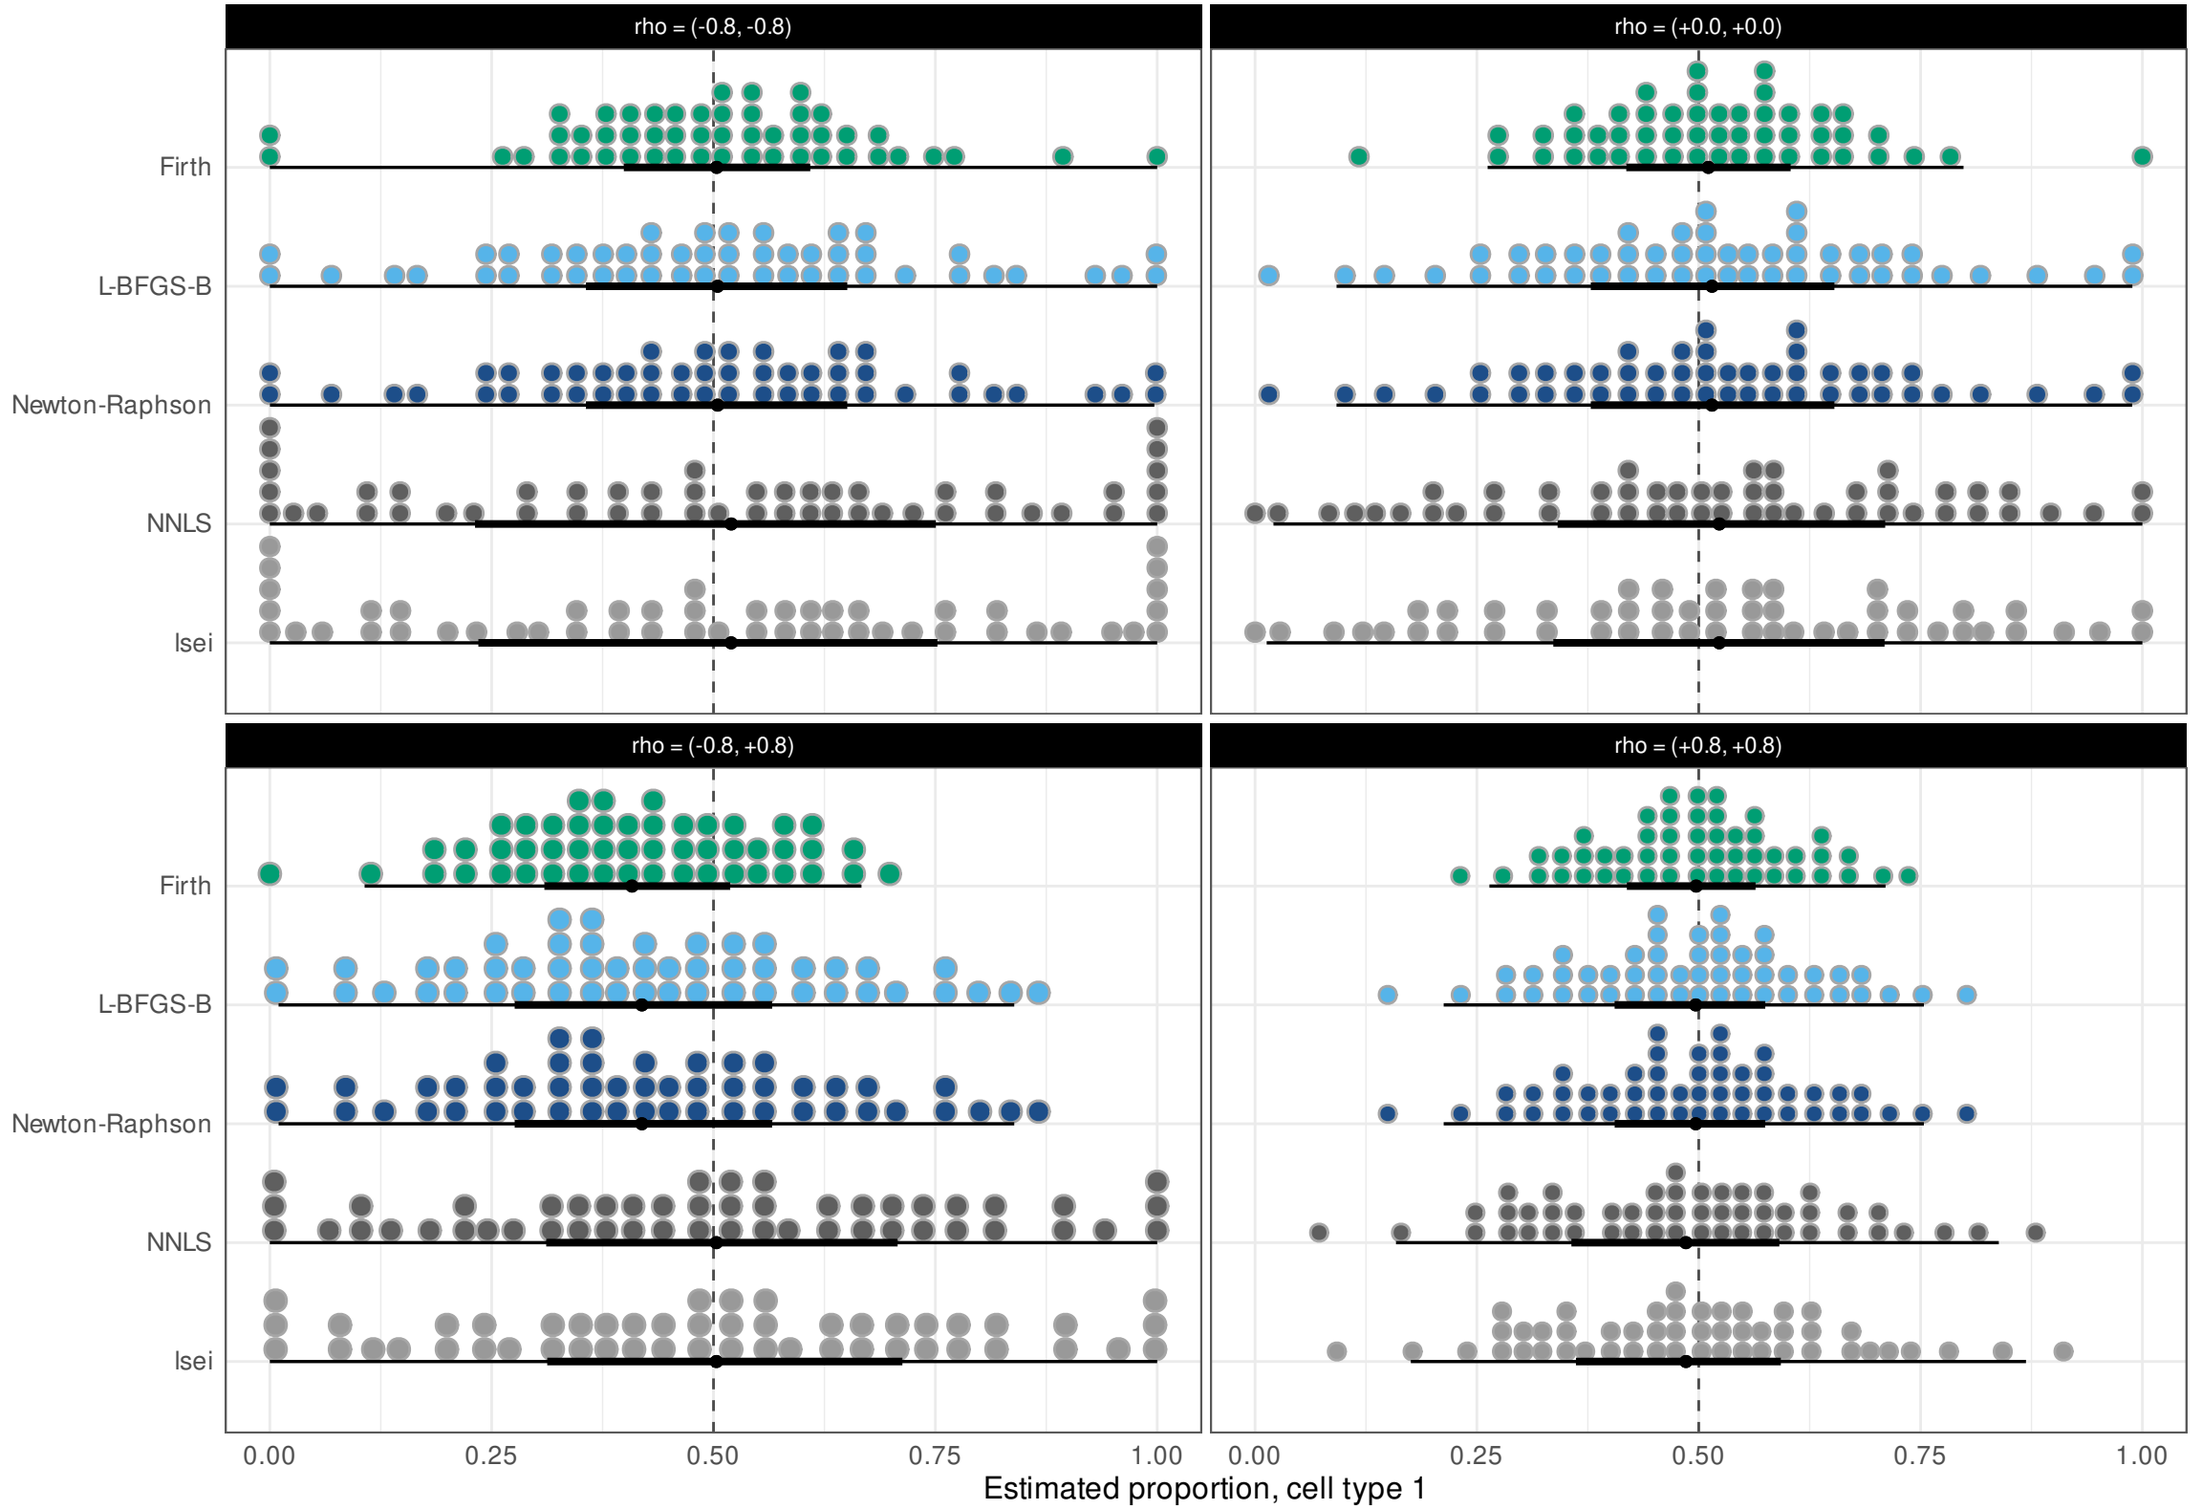

small centroid gap / homoscedastic / highly unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

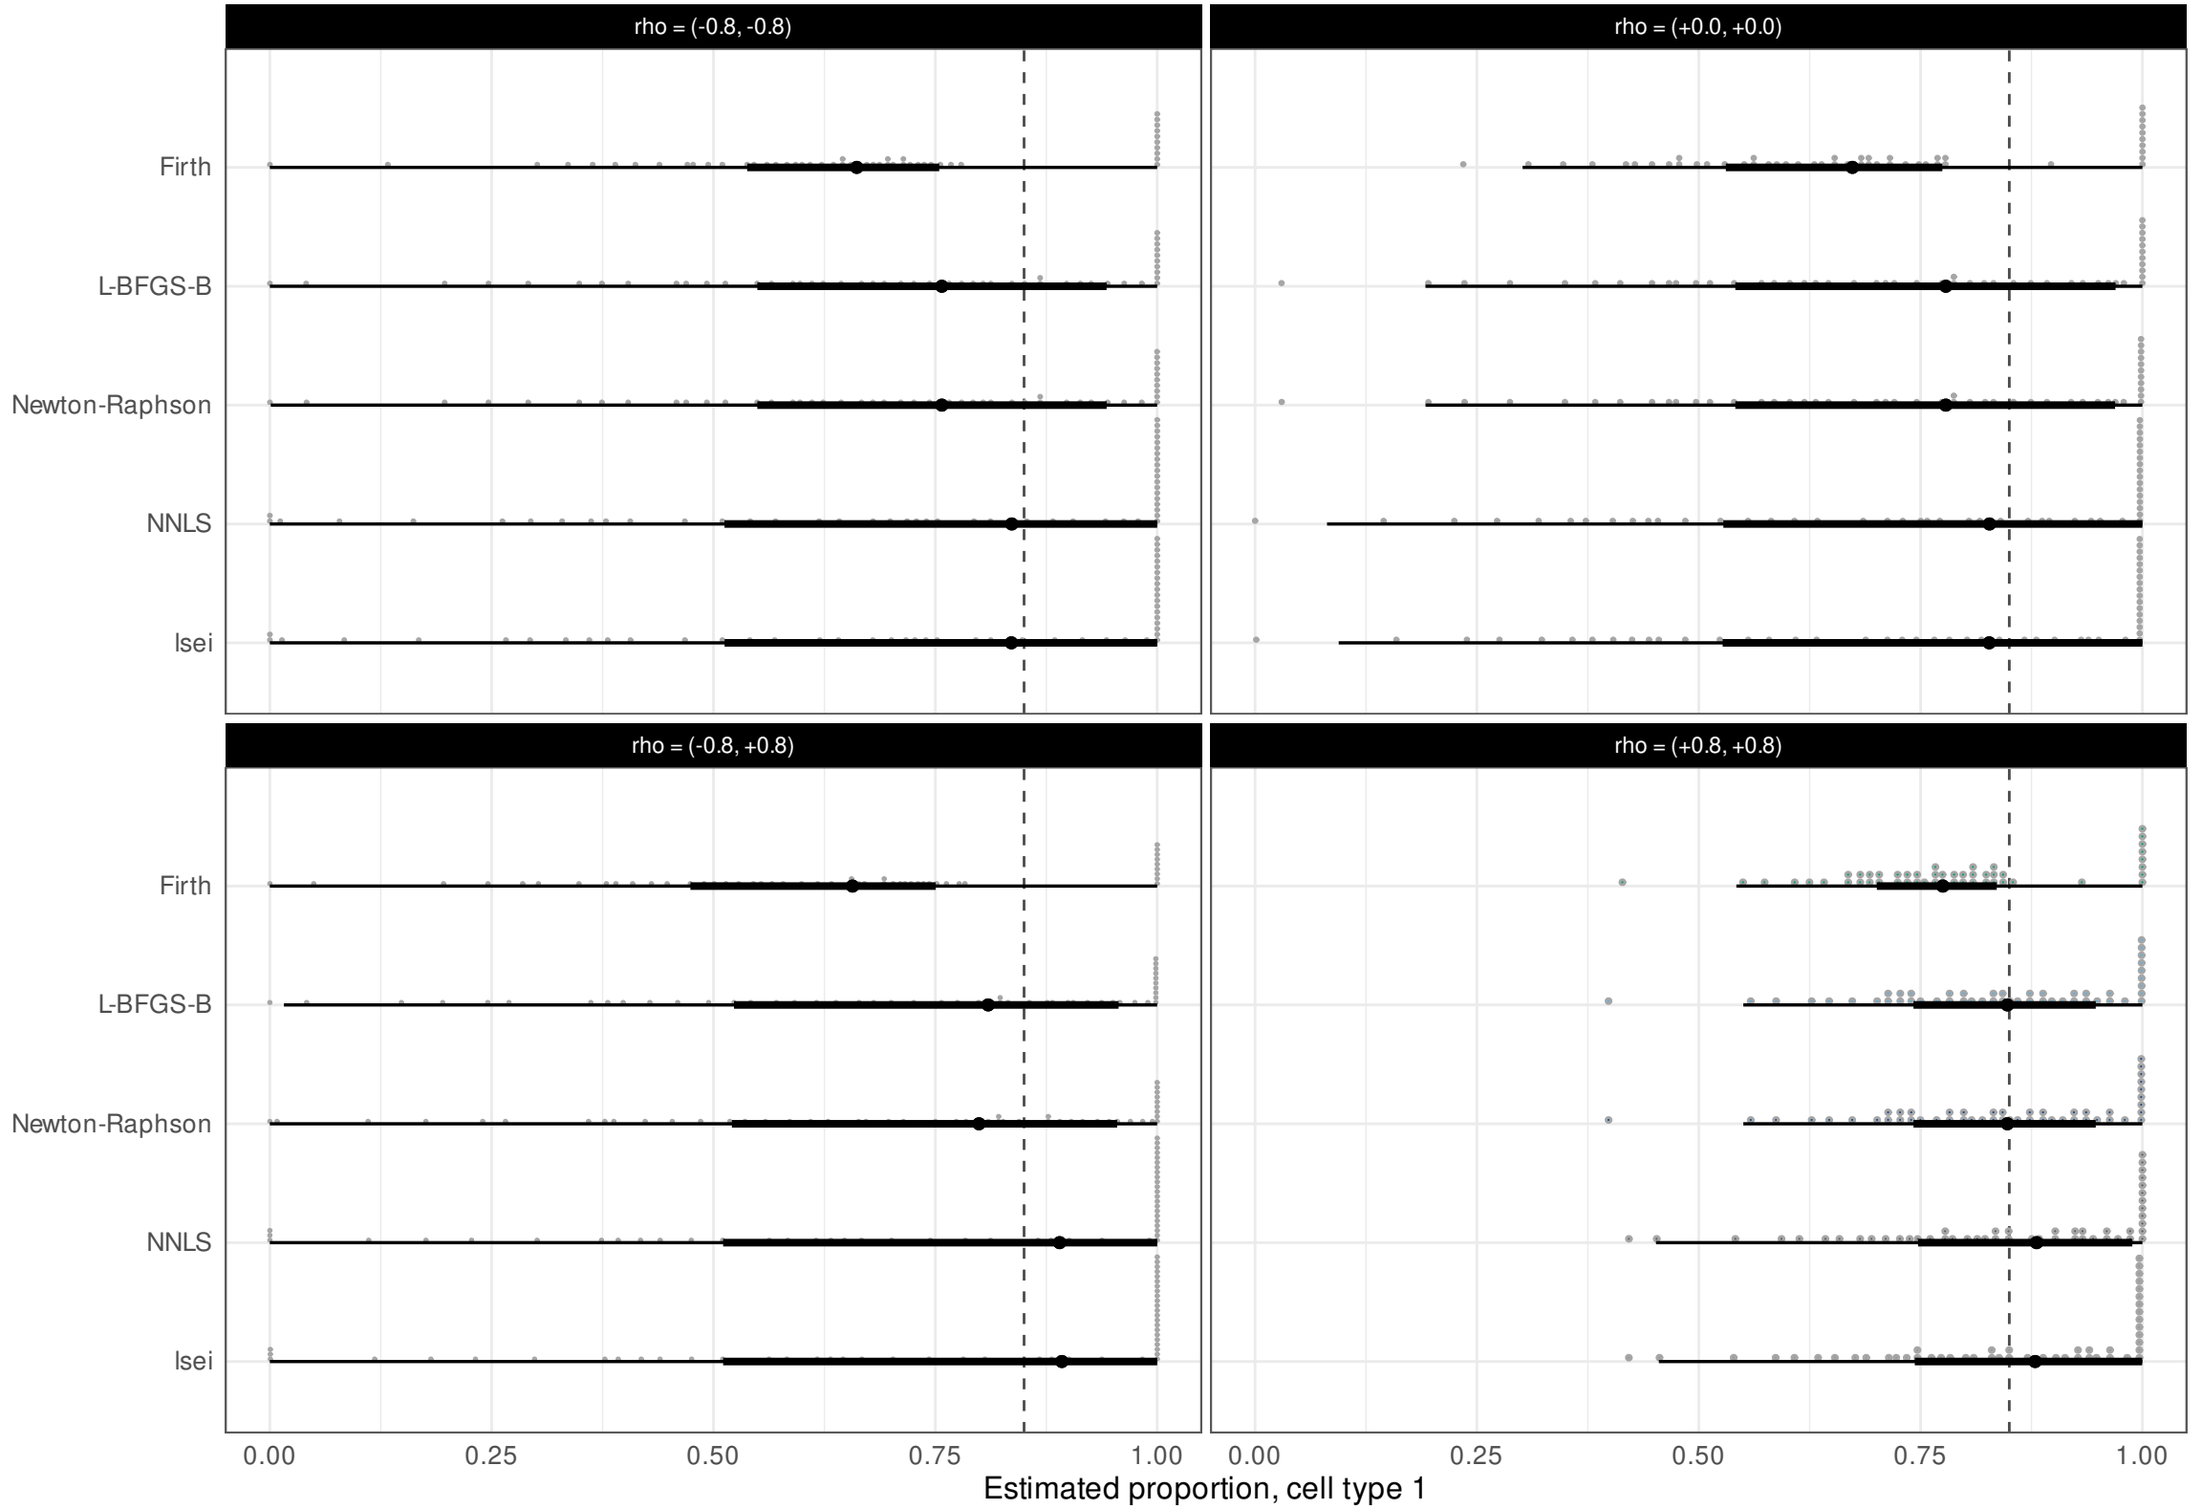

small centroid gap / heteroscedastic / balanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

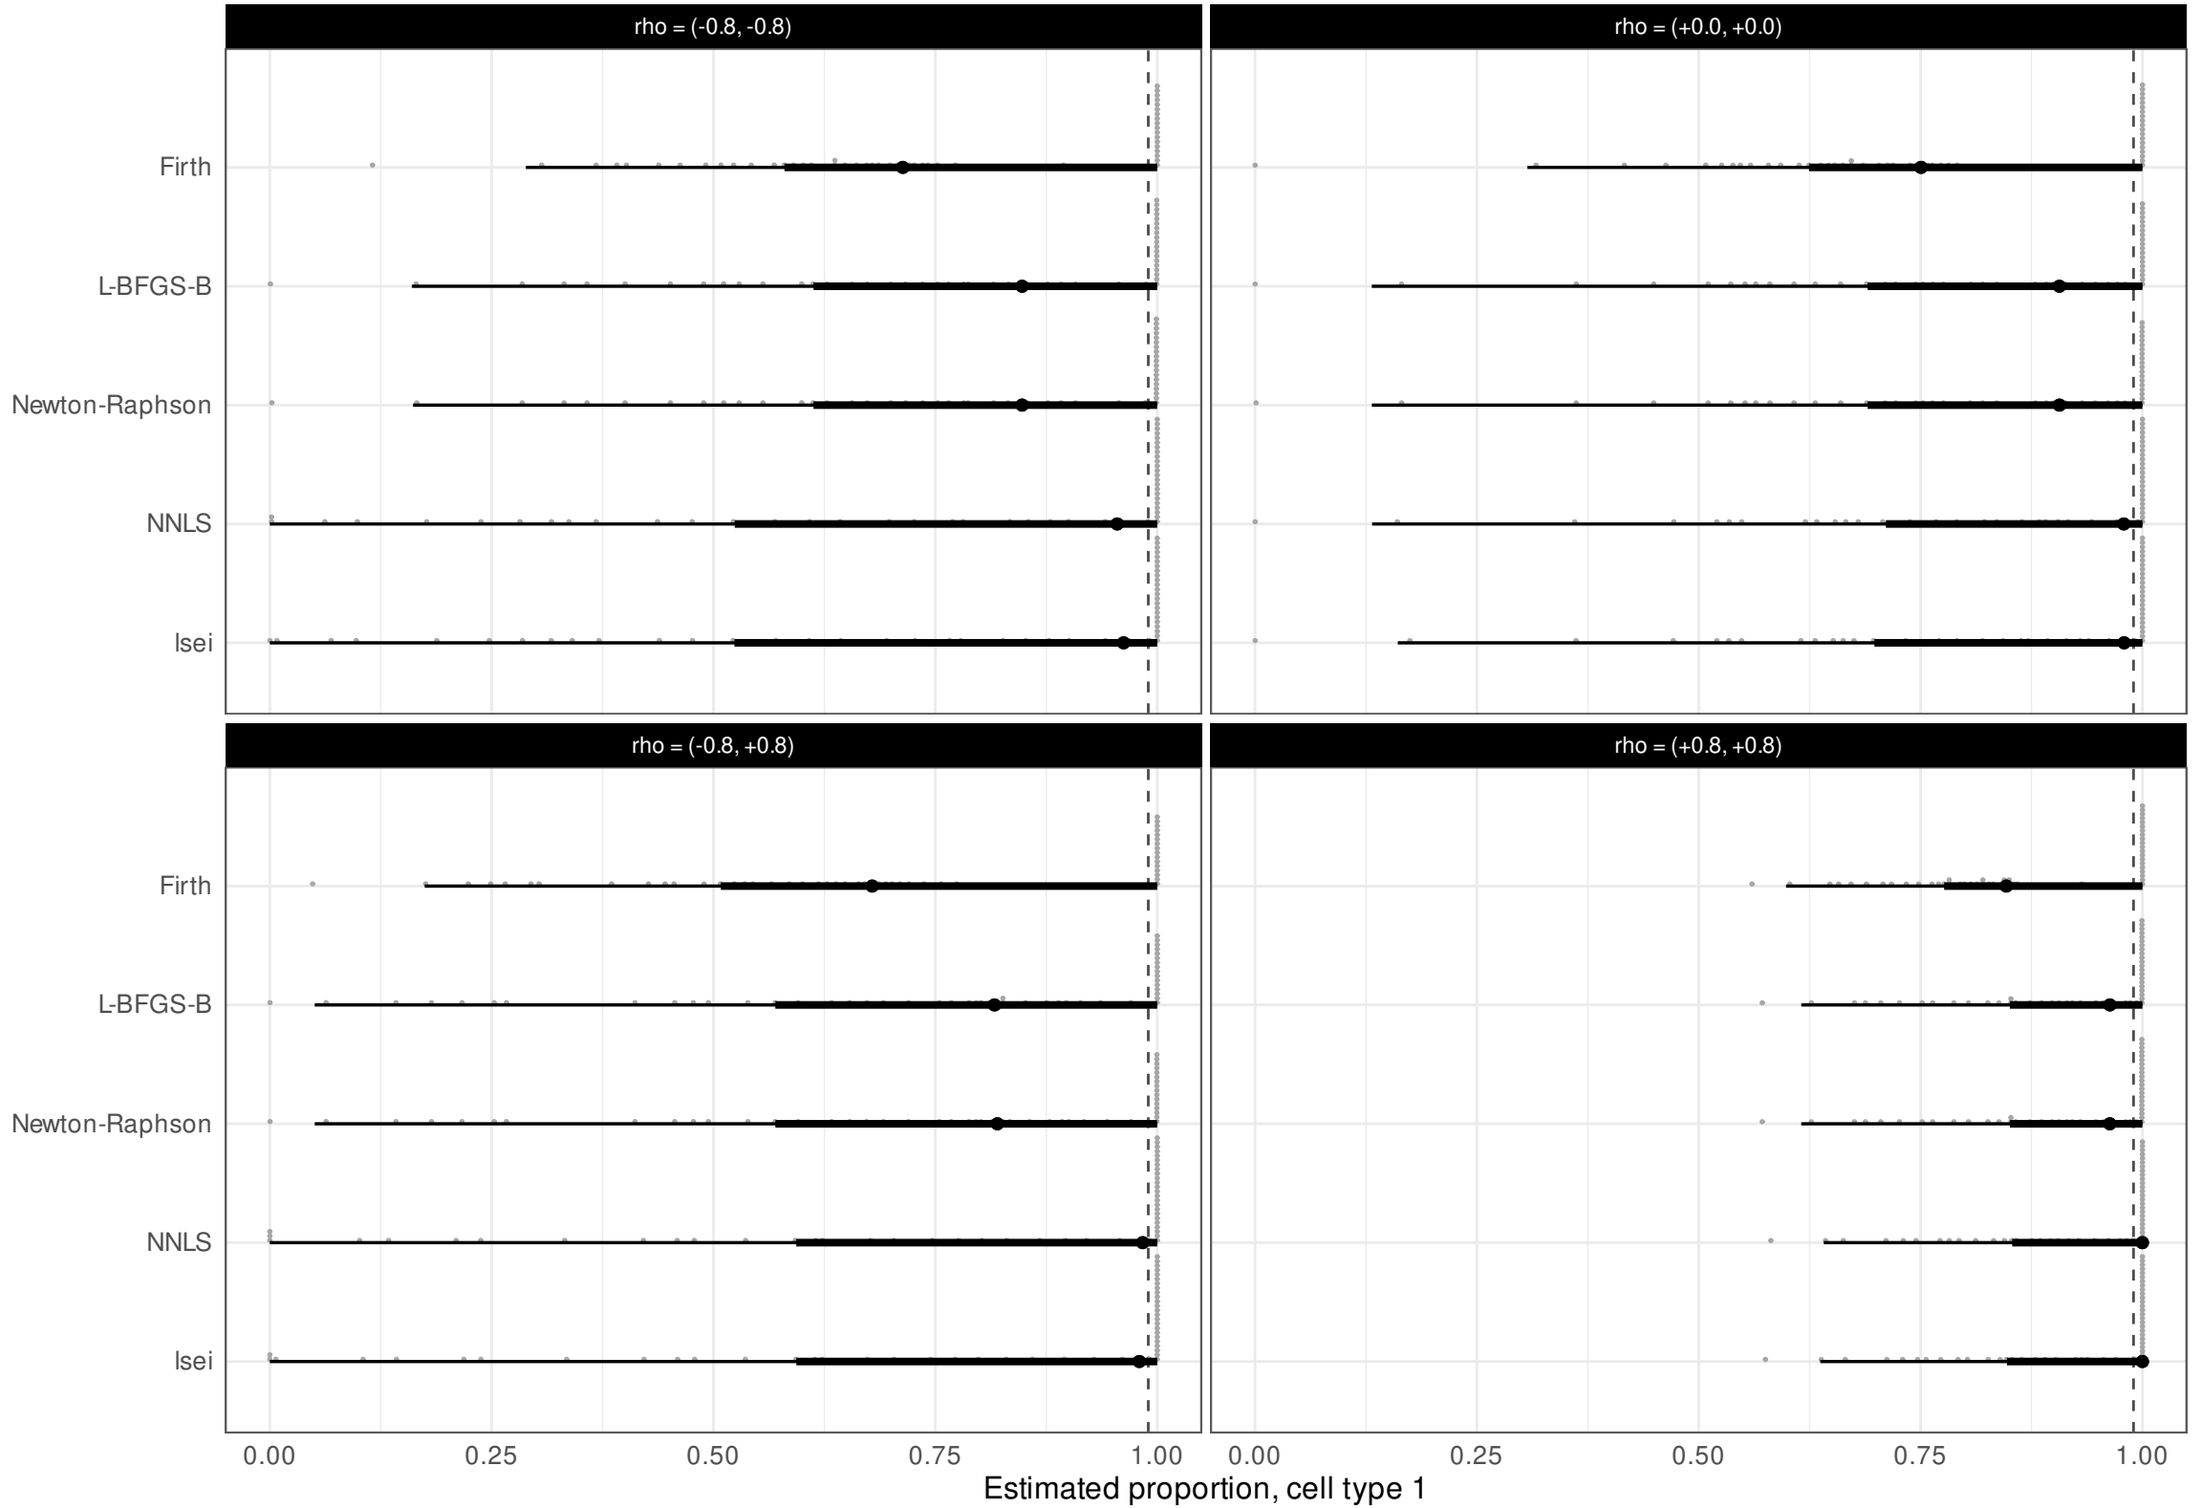

small centroid gap / heteroscedastic / moderately unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

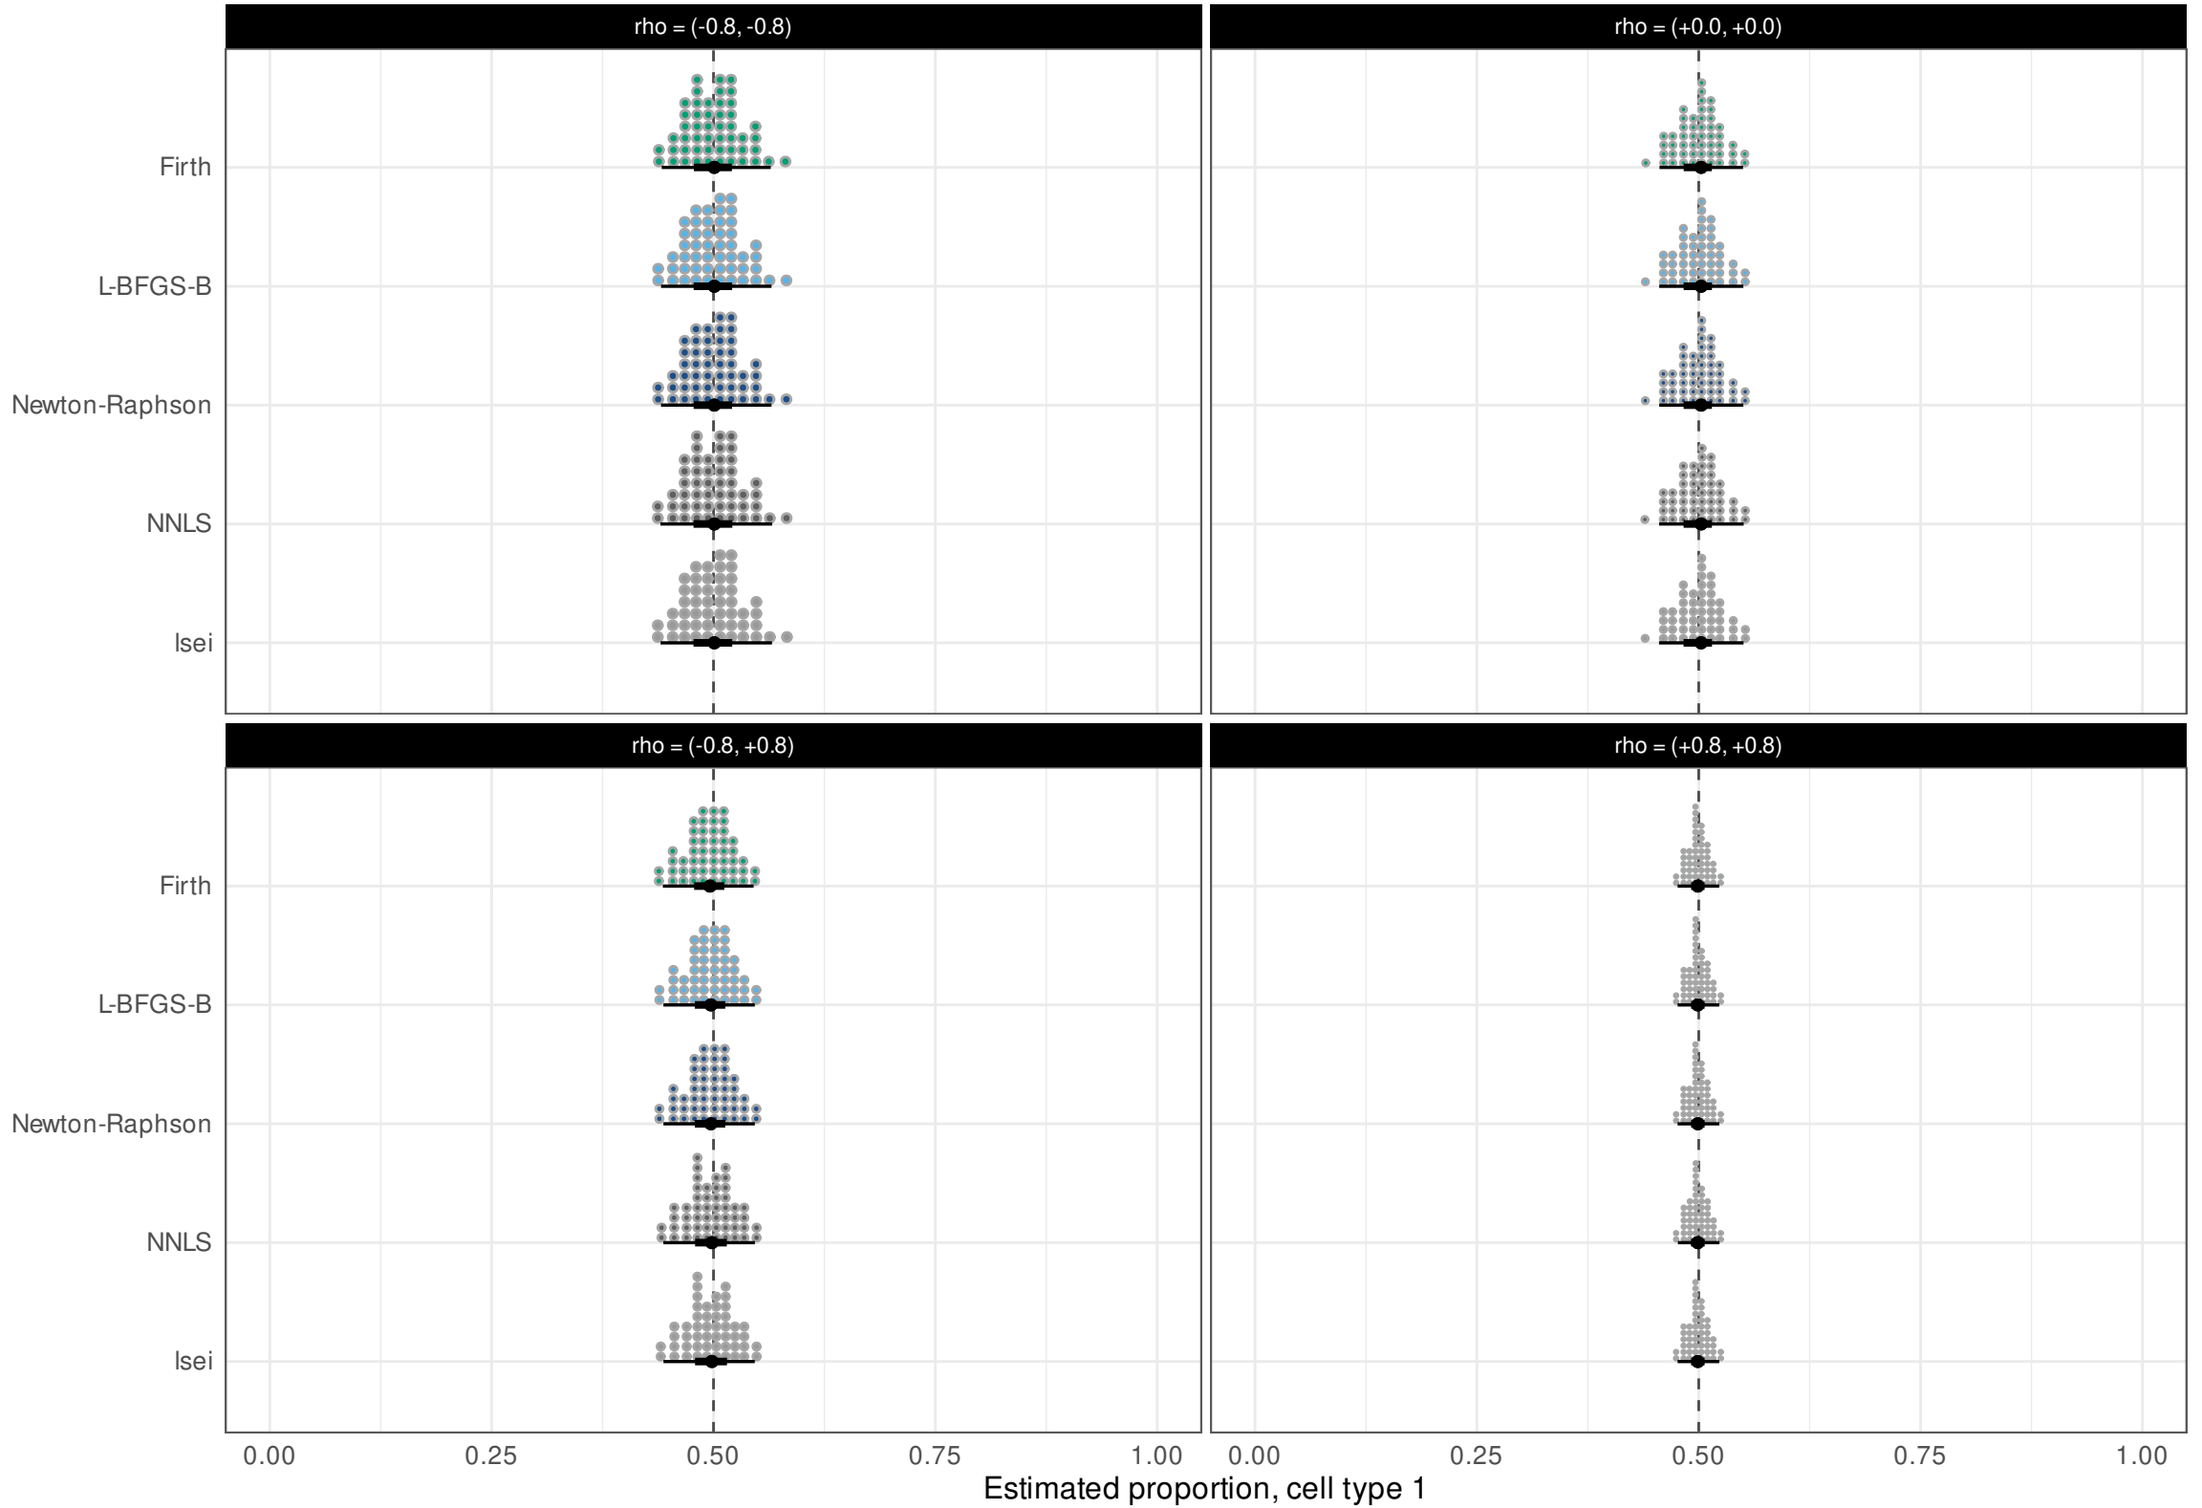

small centroid gap / heteroscedastic / highly unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

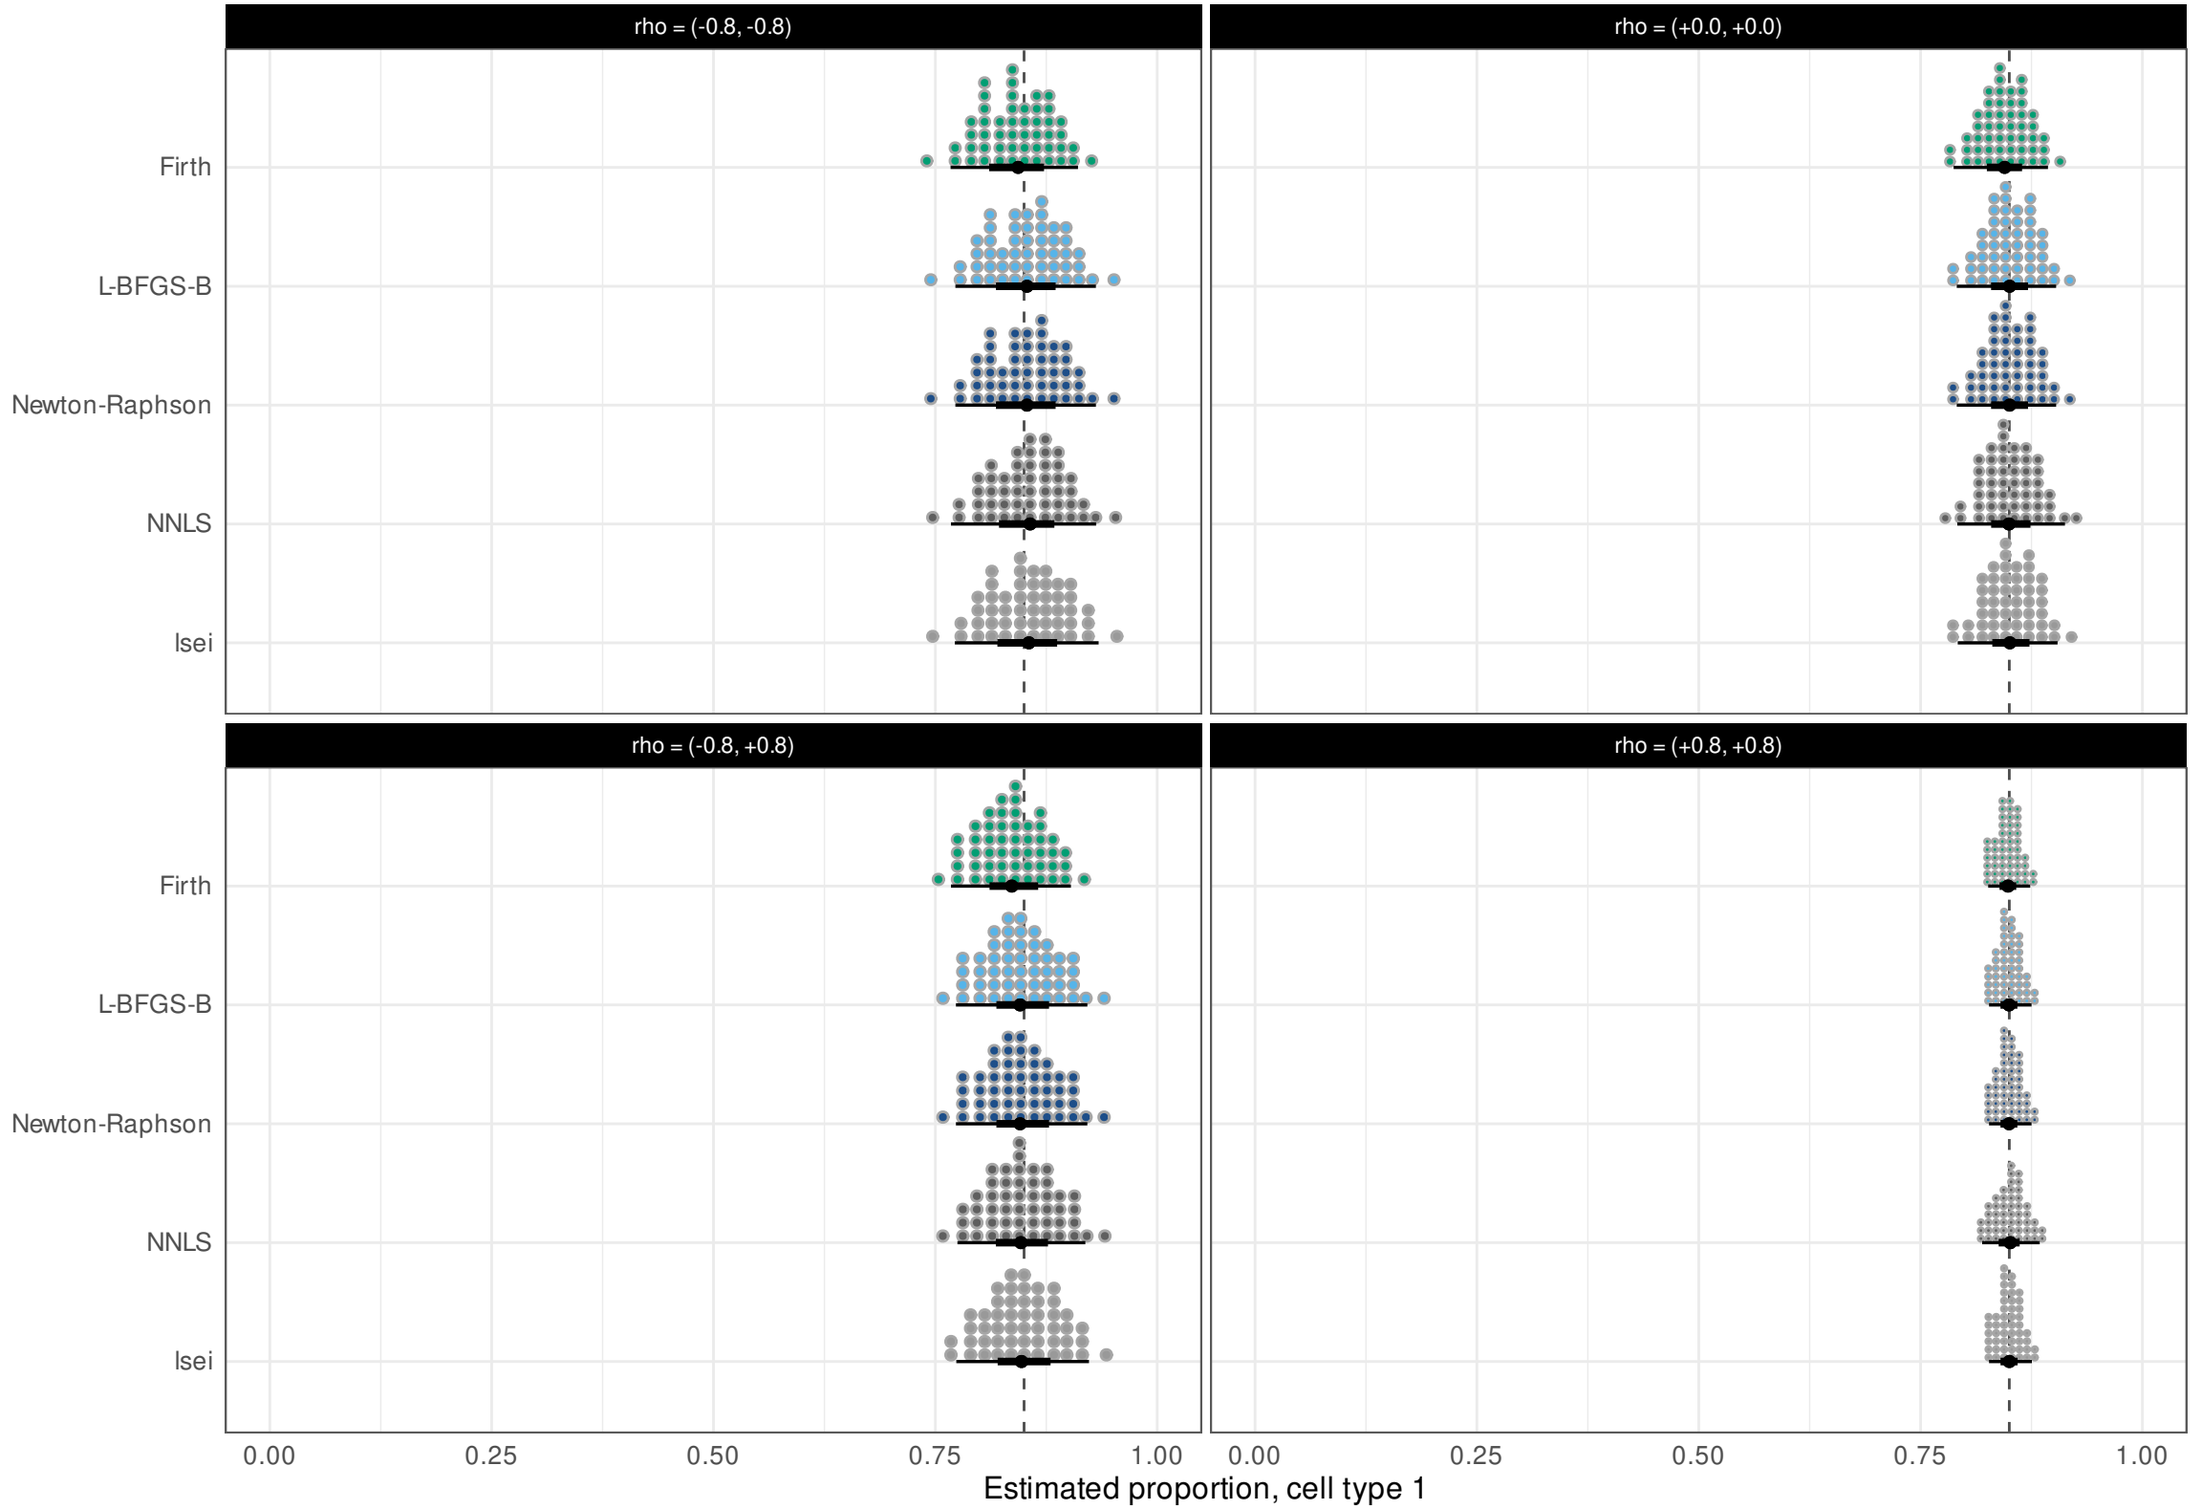

large centroid gap / homoscedastic / balanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

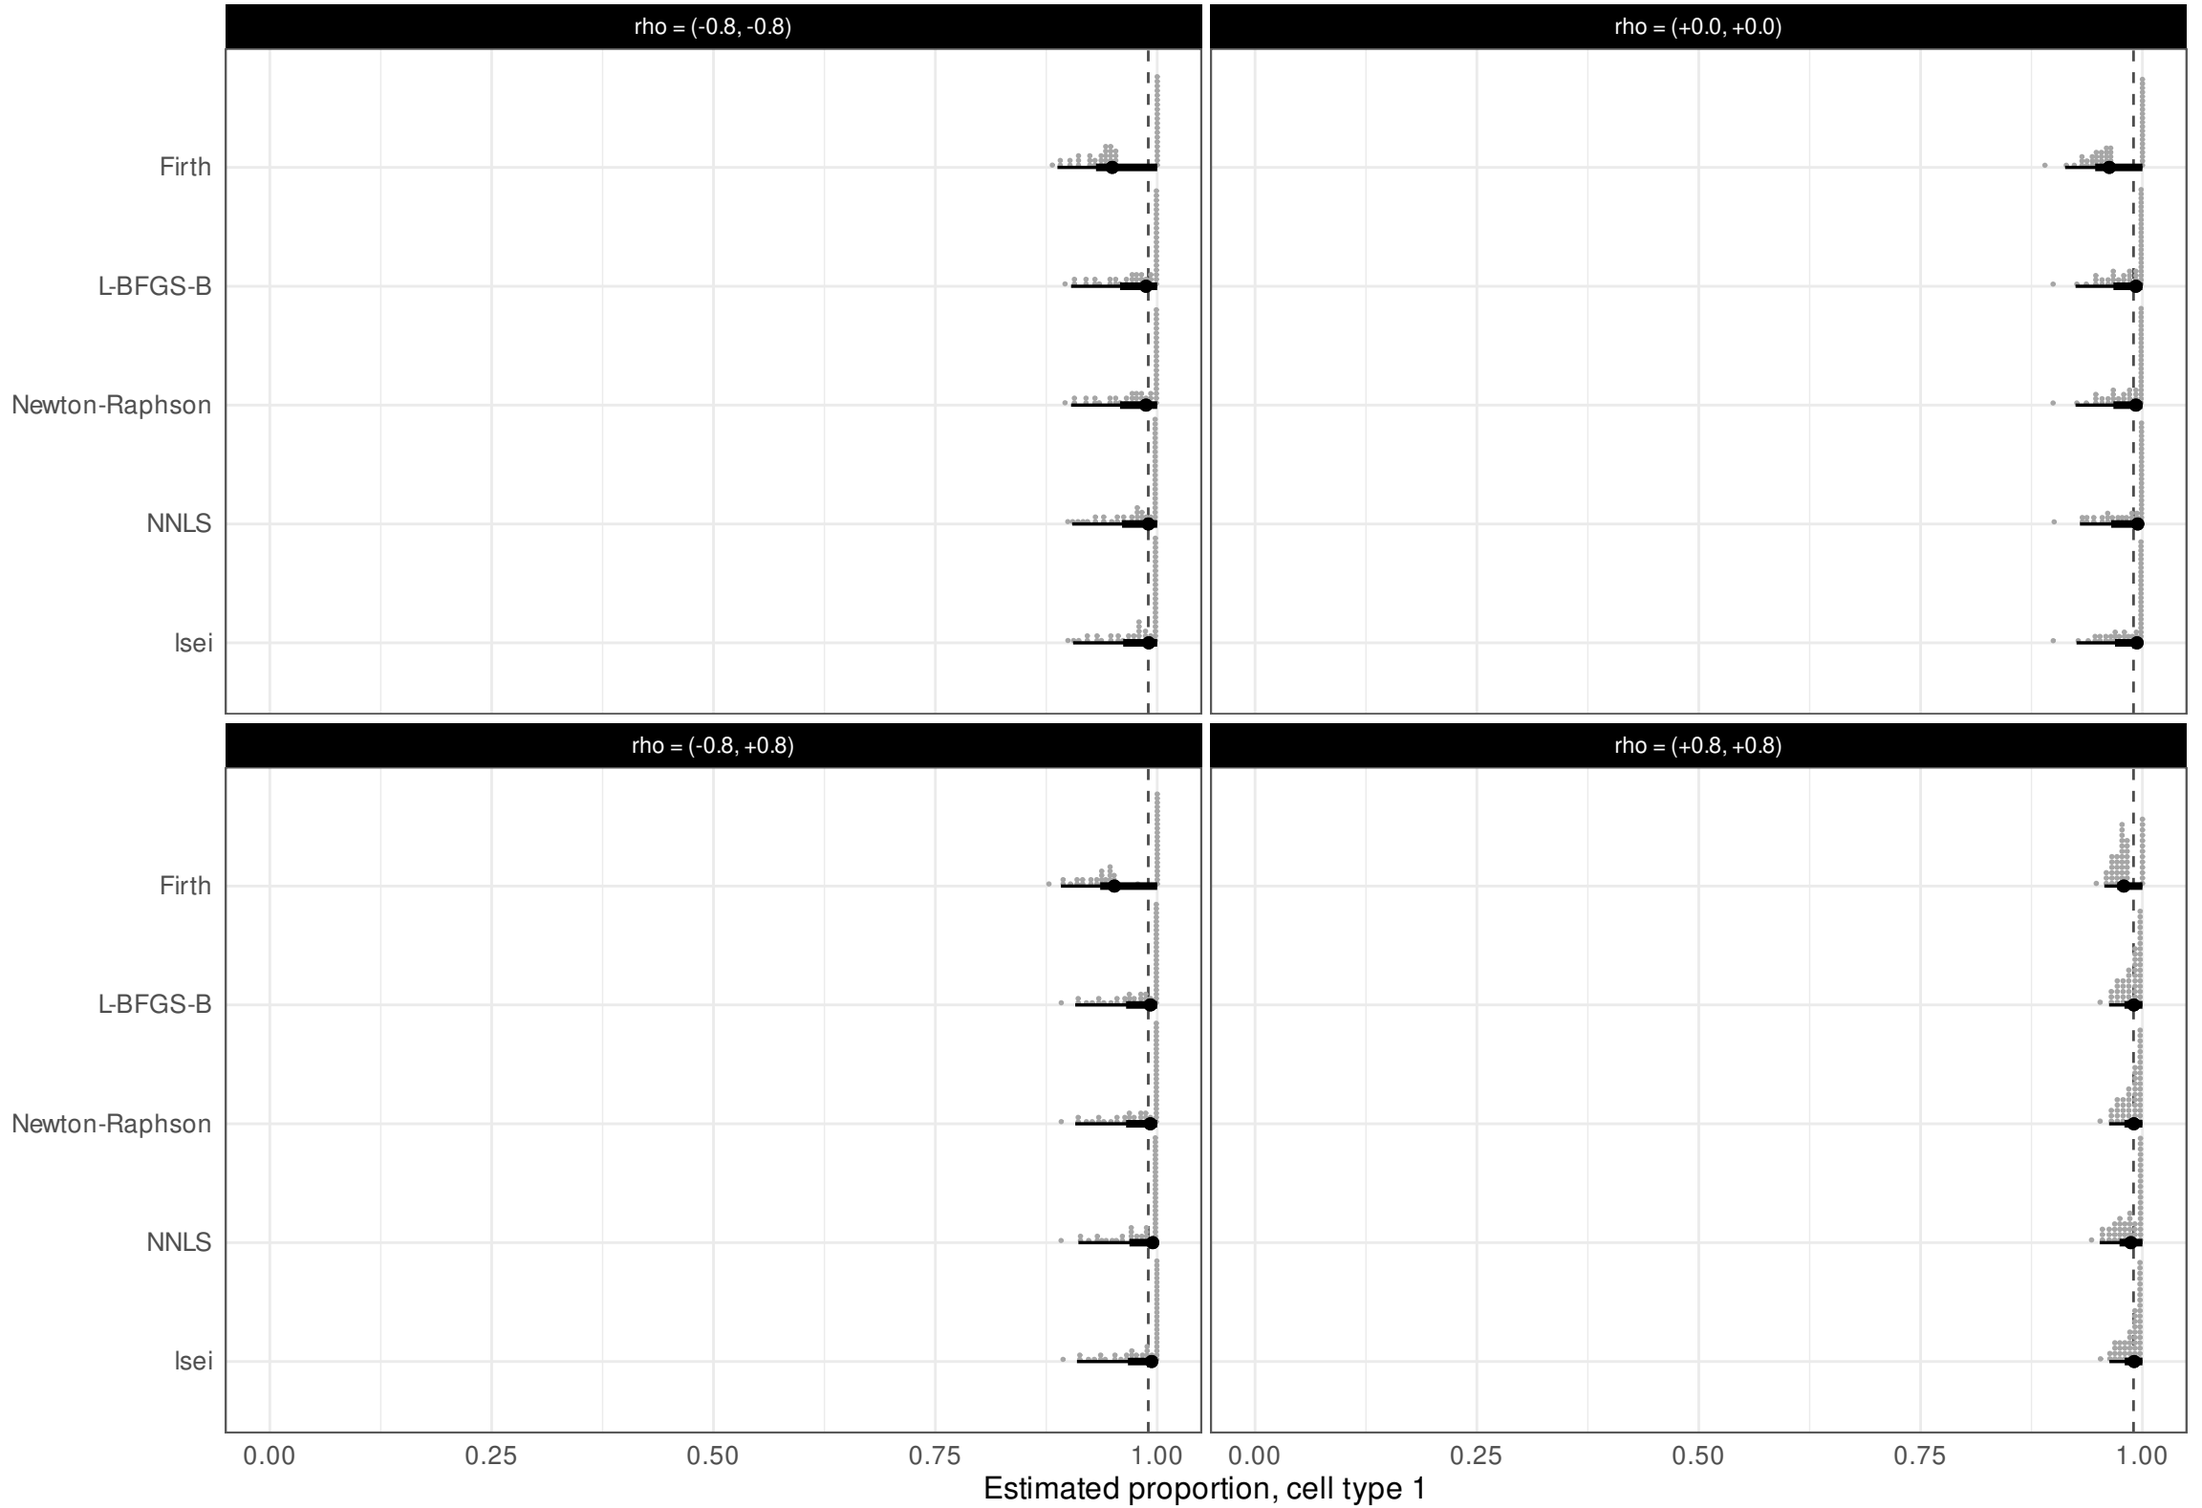

large centroid gap / homoscedastic / moderately unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

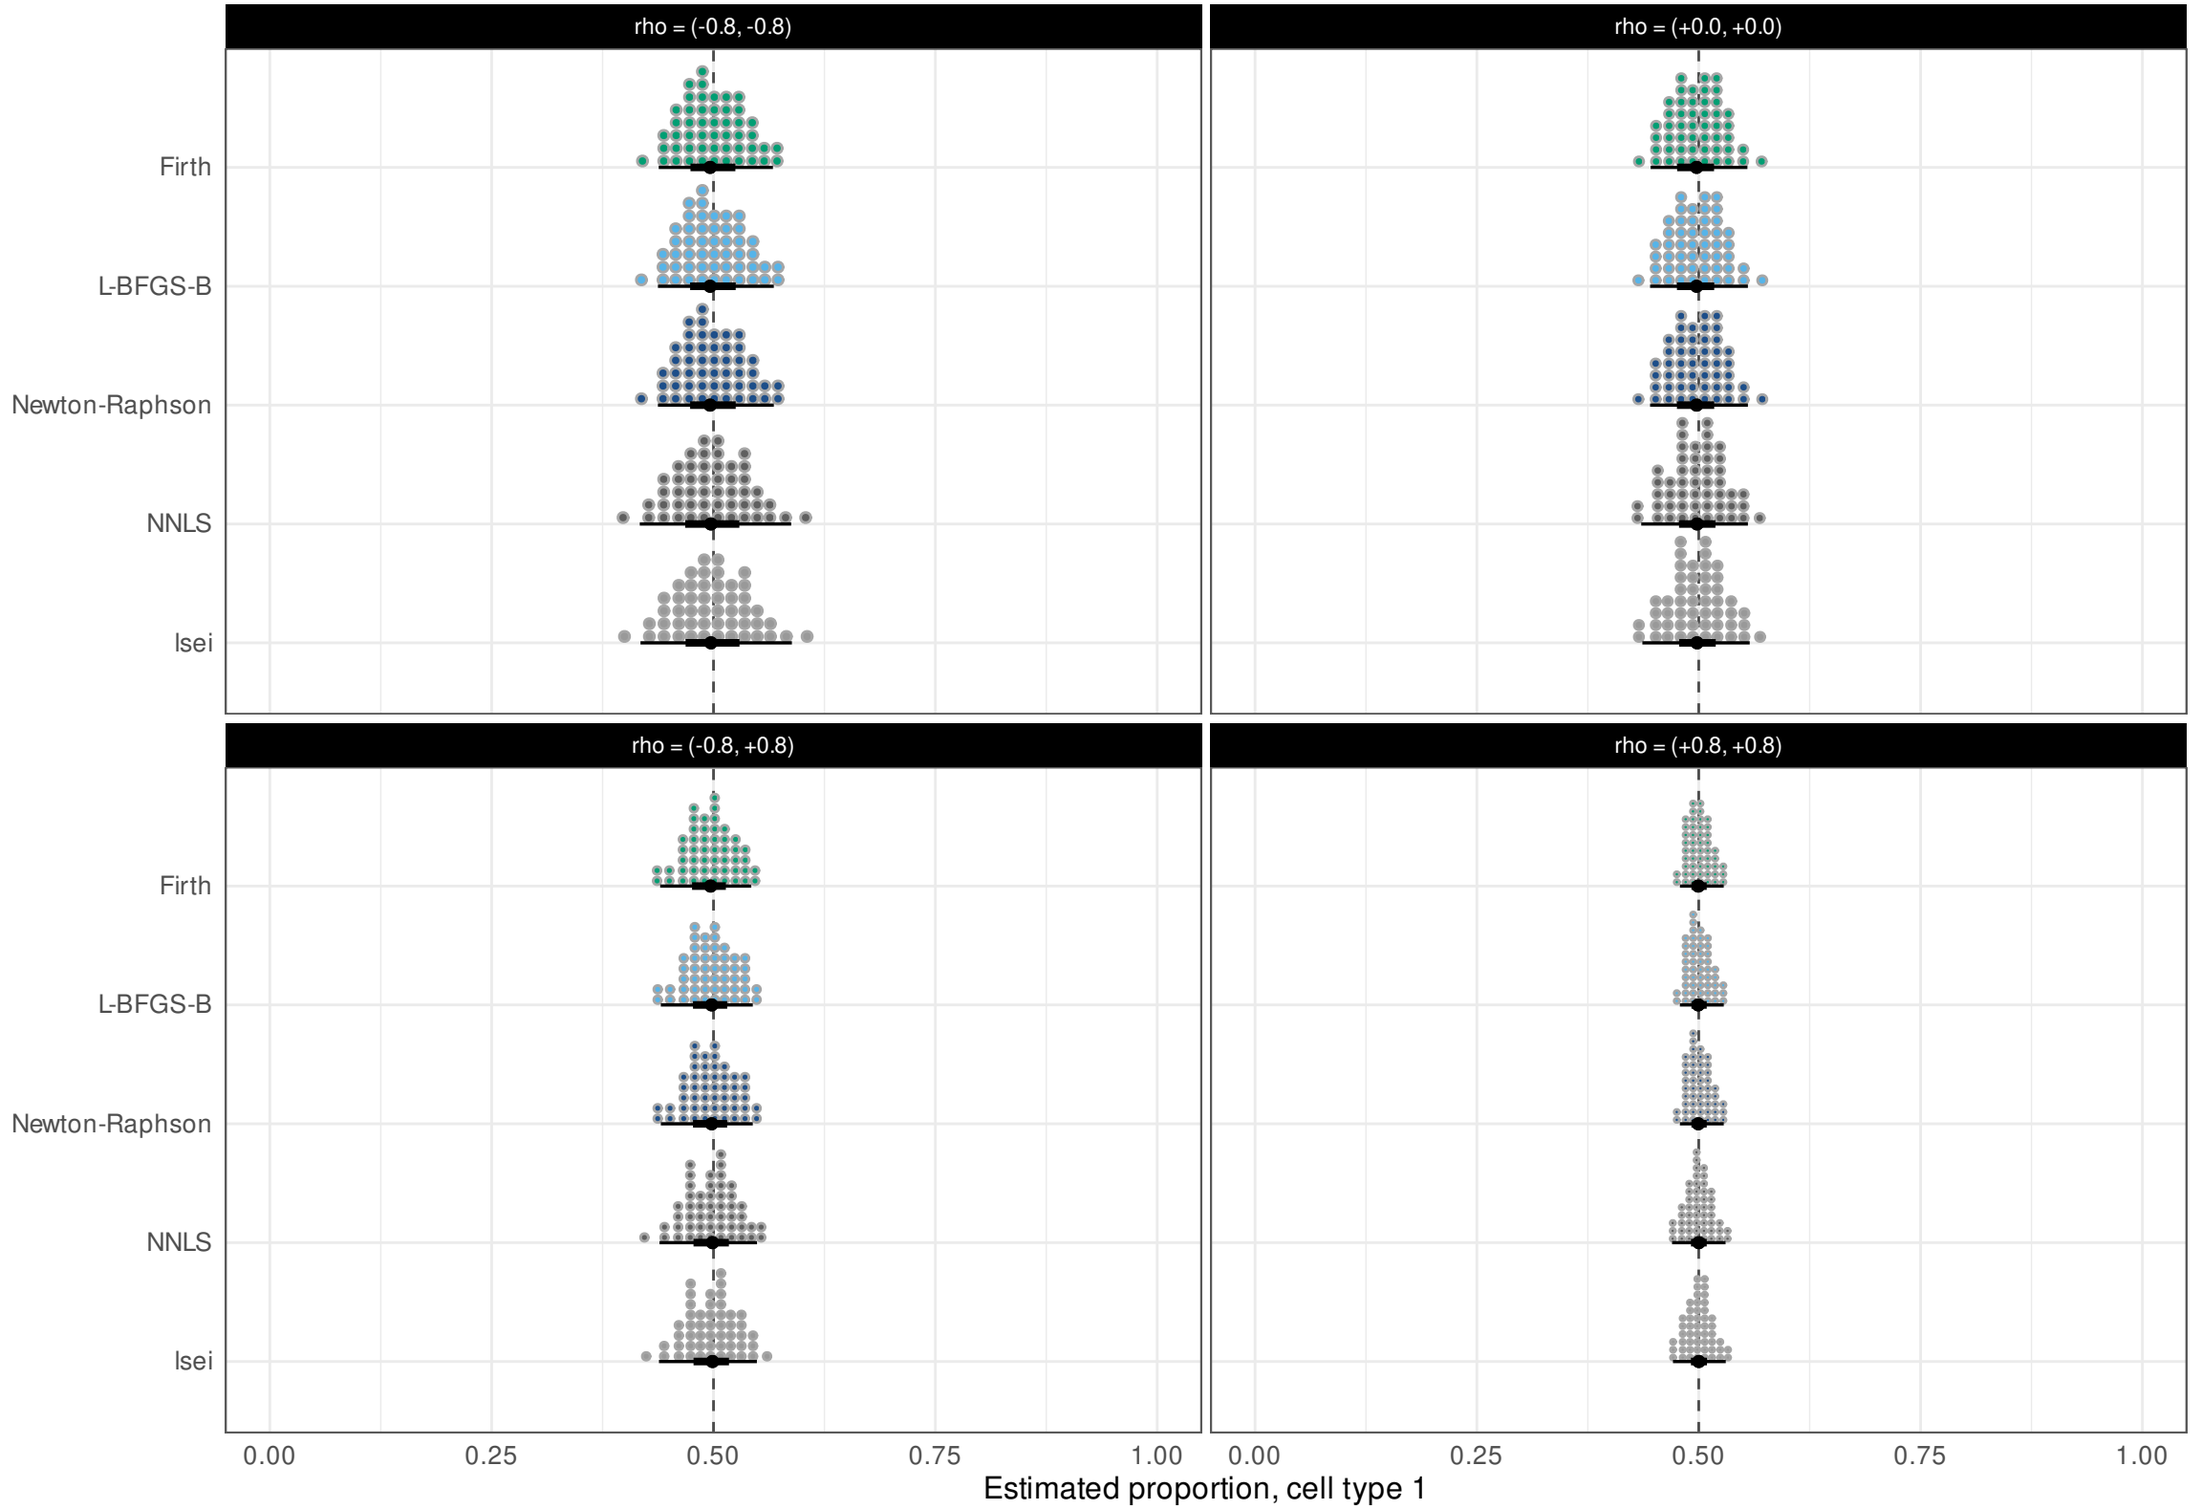

large centroid gap / homoscedastic / highly unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

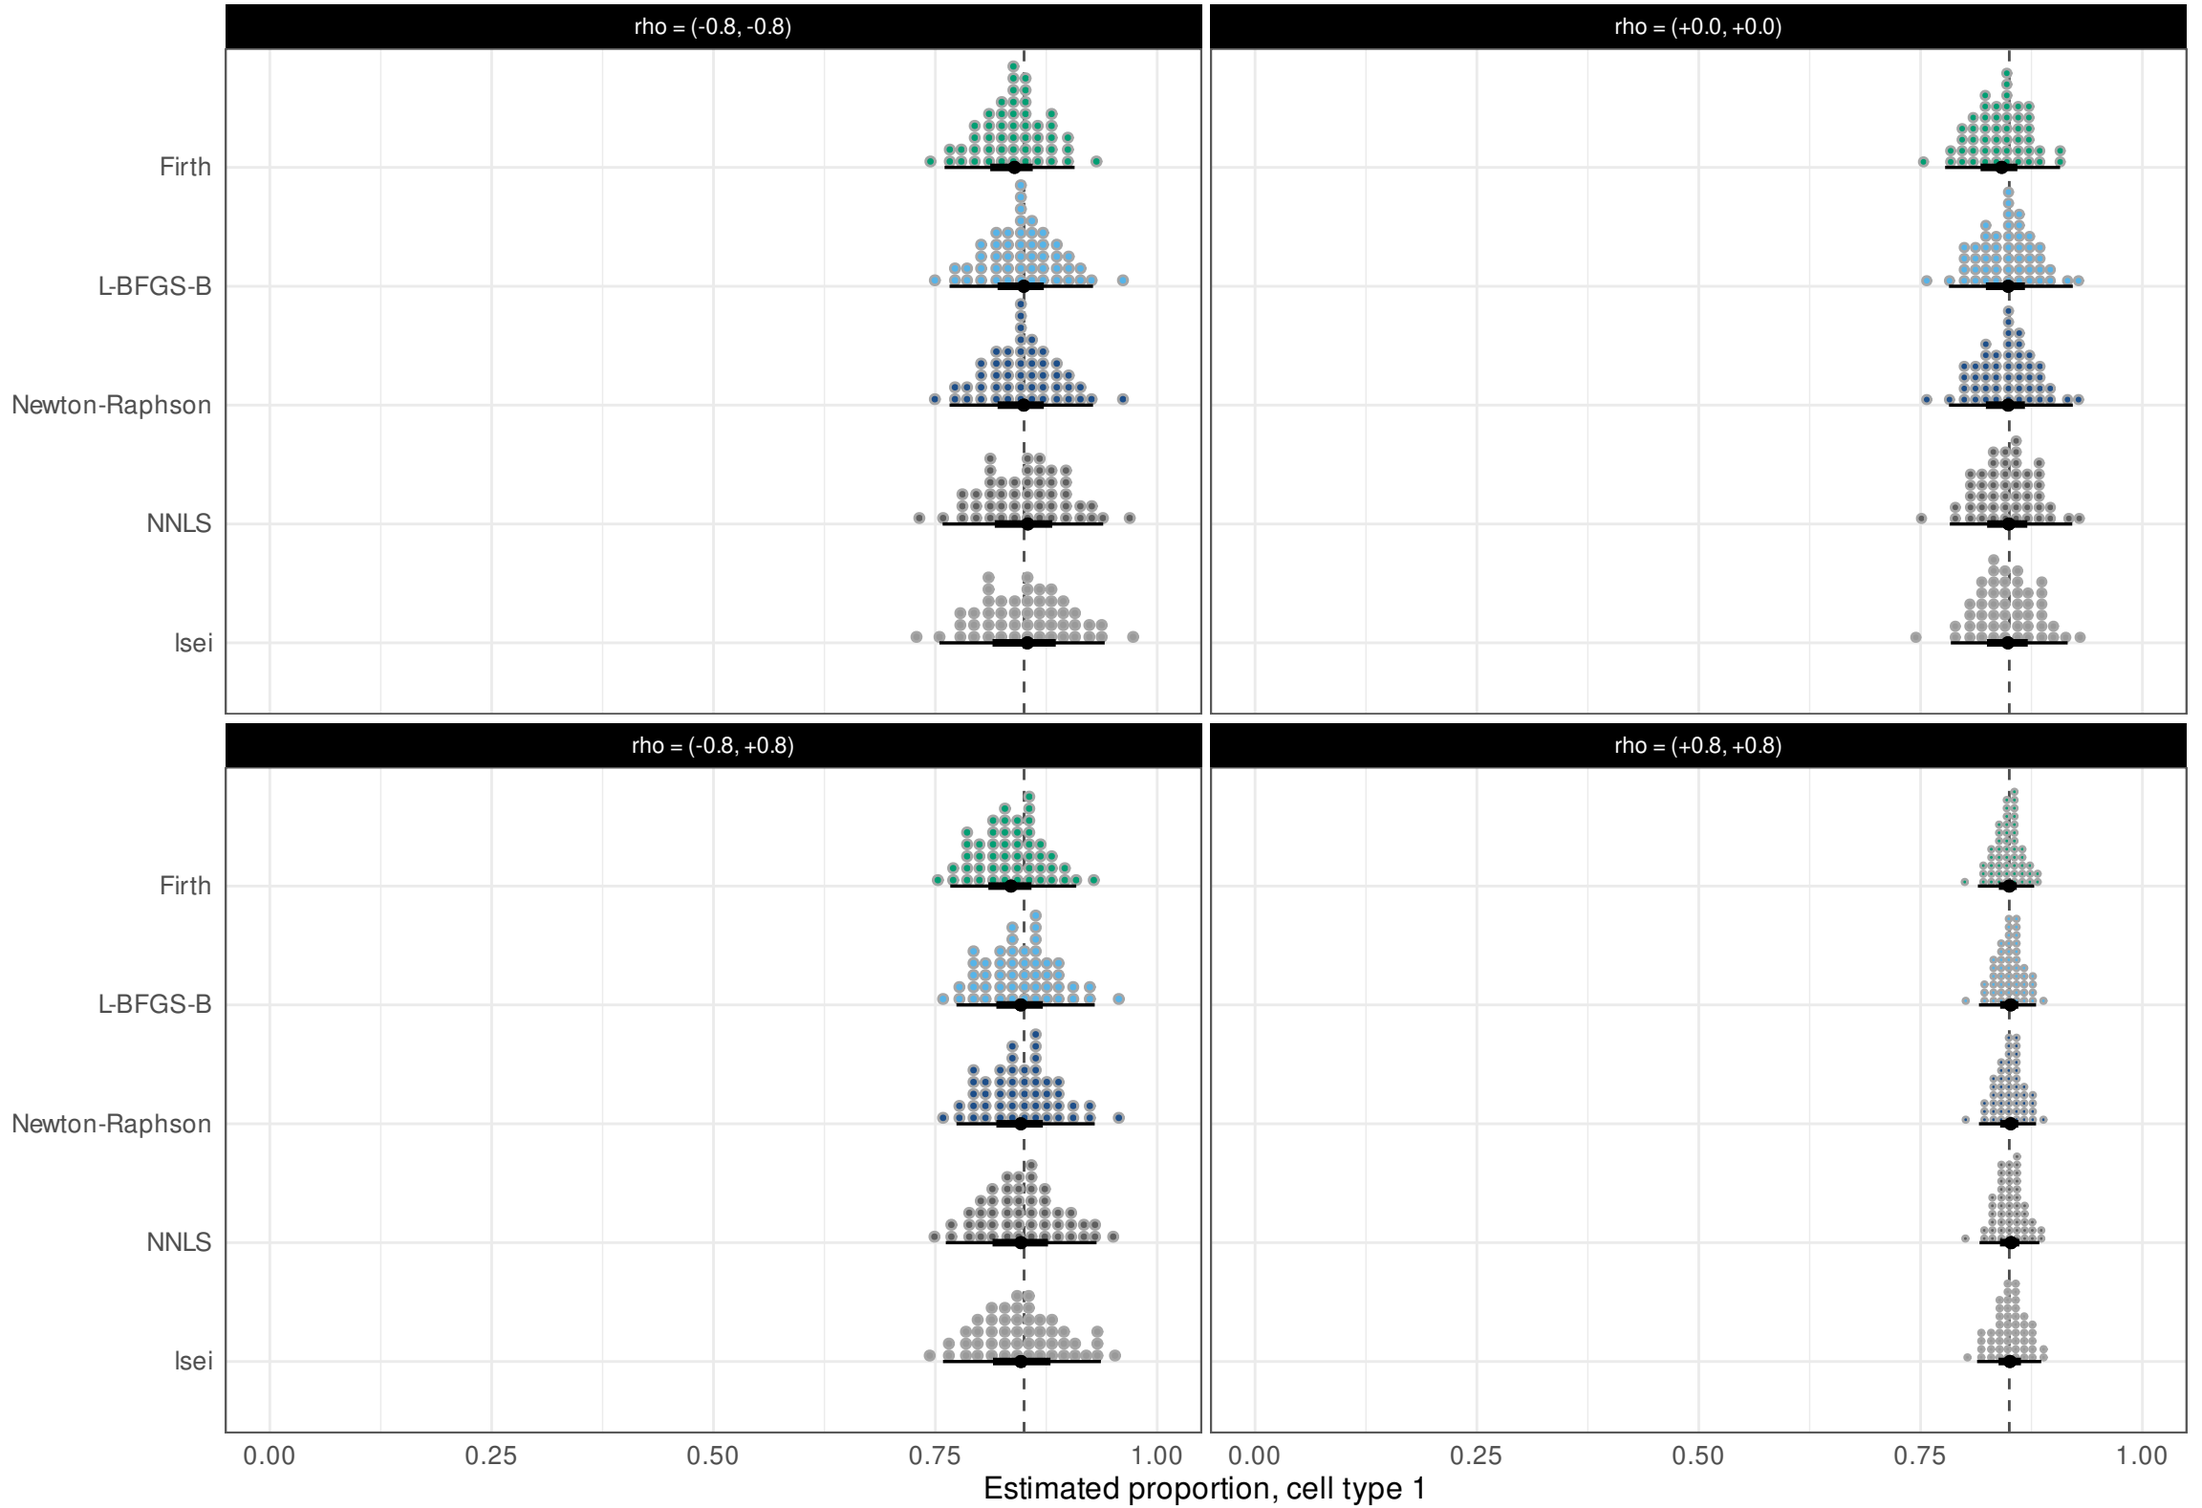

large centroid gap / heteroscedastic / balanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

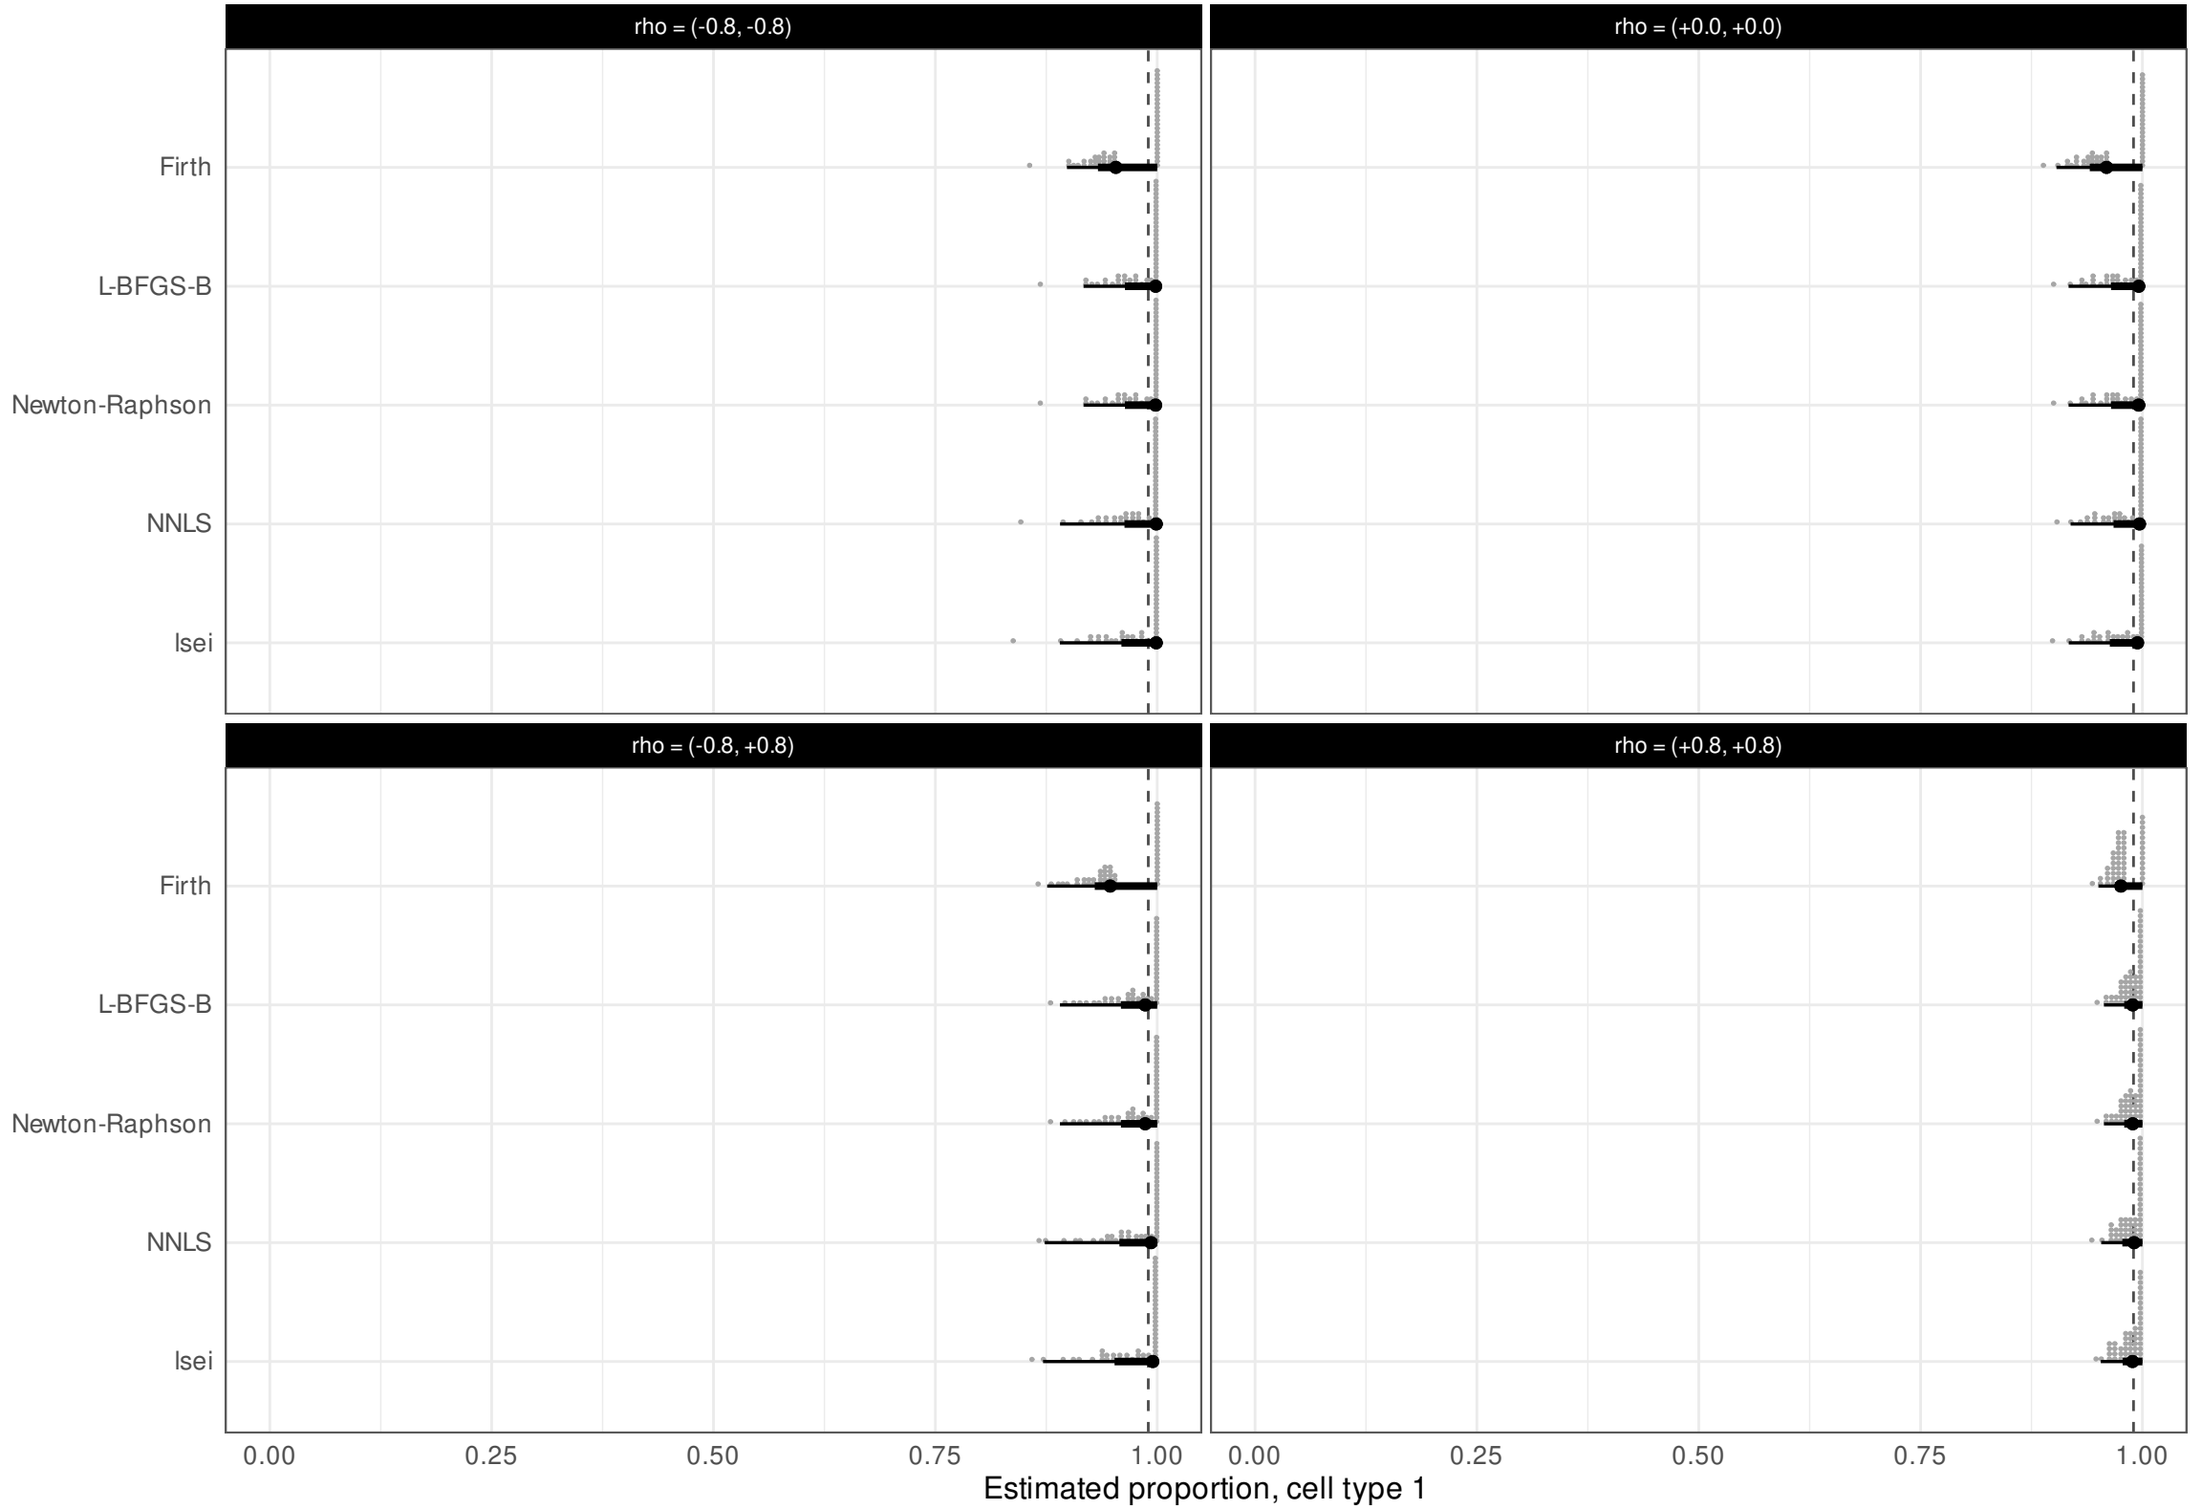

large centroid gap / heteroscedastic / moderately unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

large centroid gap / heteroscedastic / highly unbalanced

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.
