Mean Aitchison distance of every method

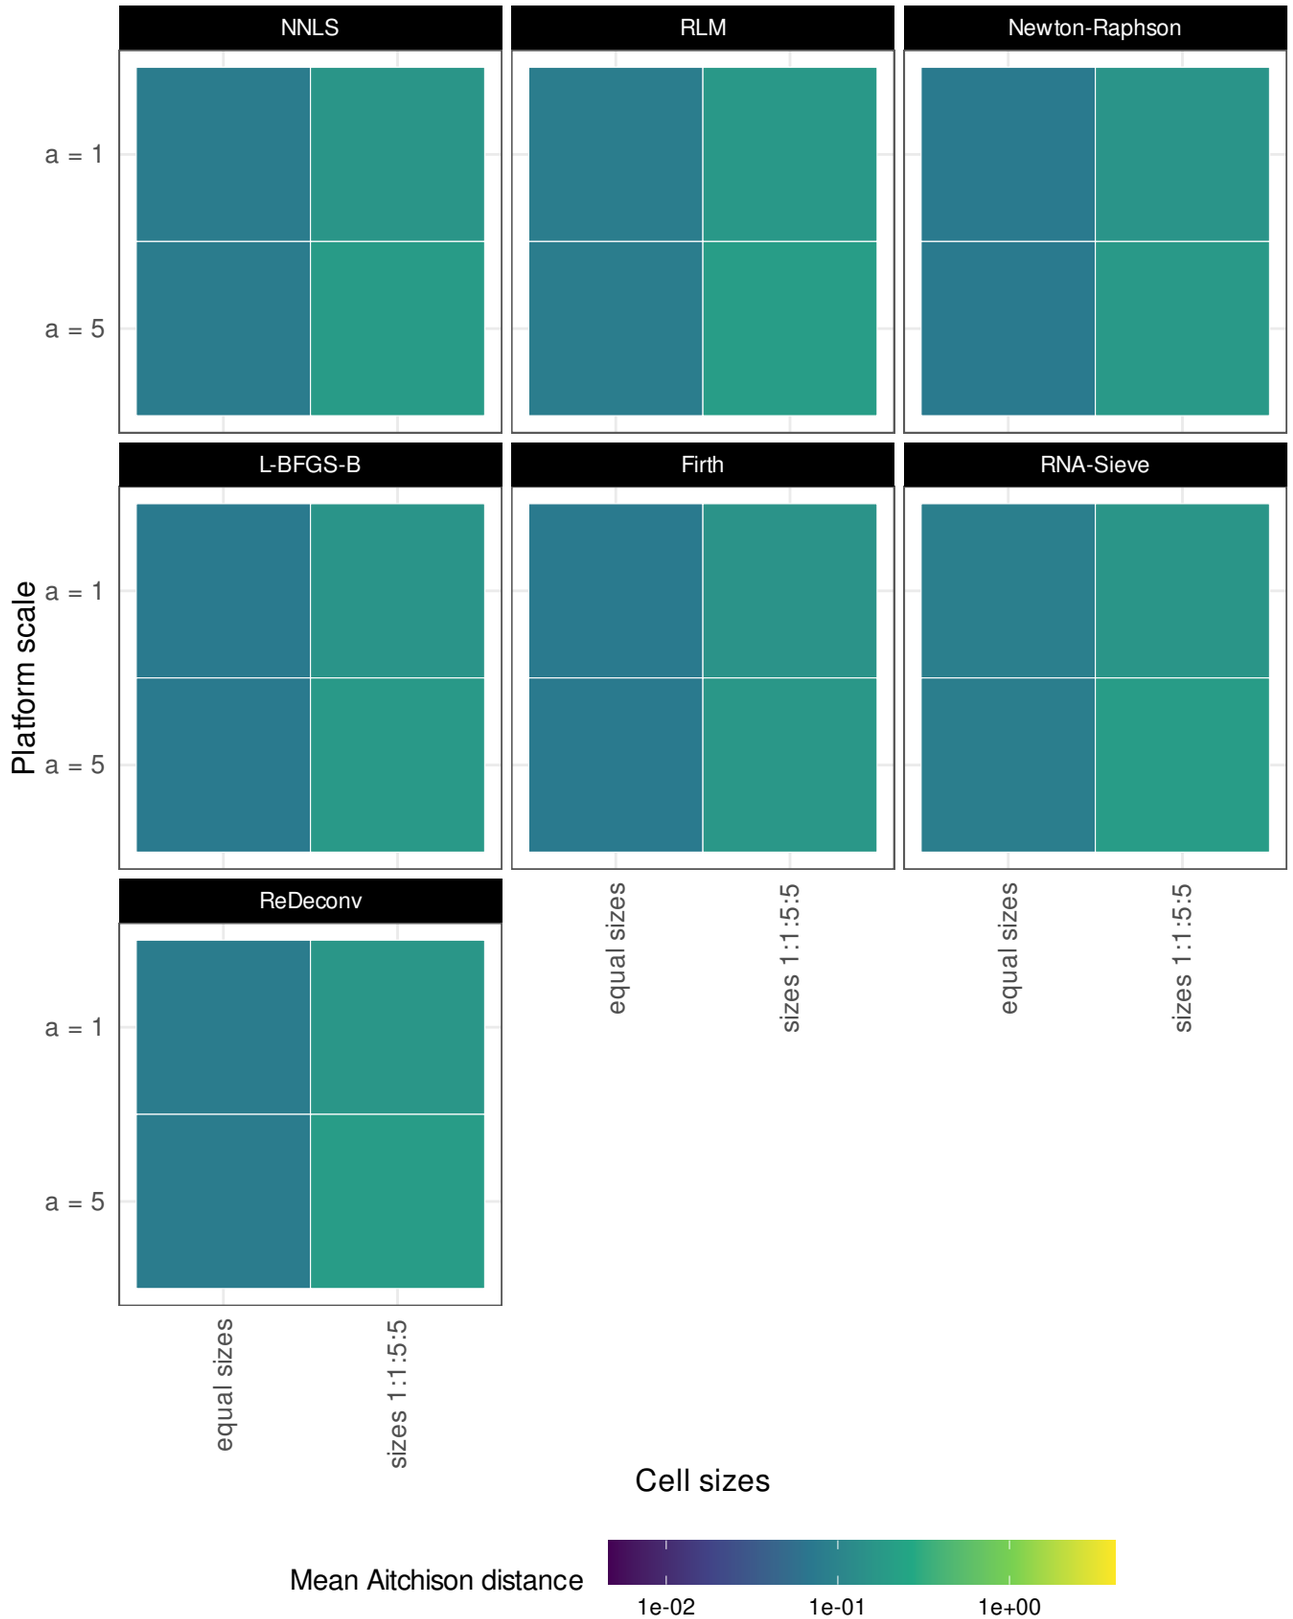

G = 20 / 1000 cells per bulk / balanced / low sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, Isei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

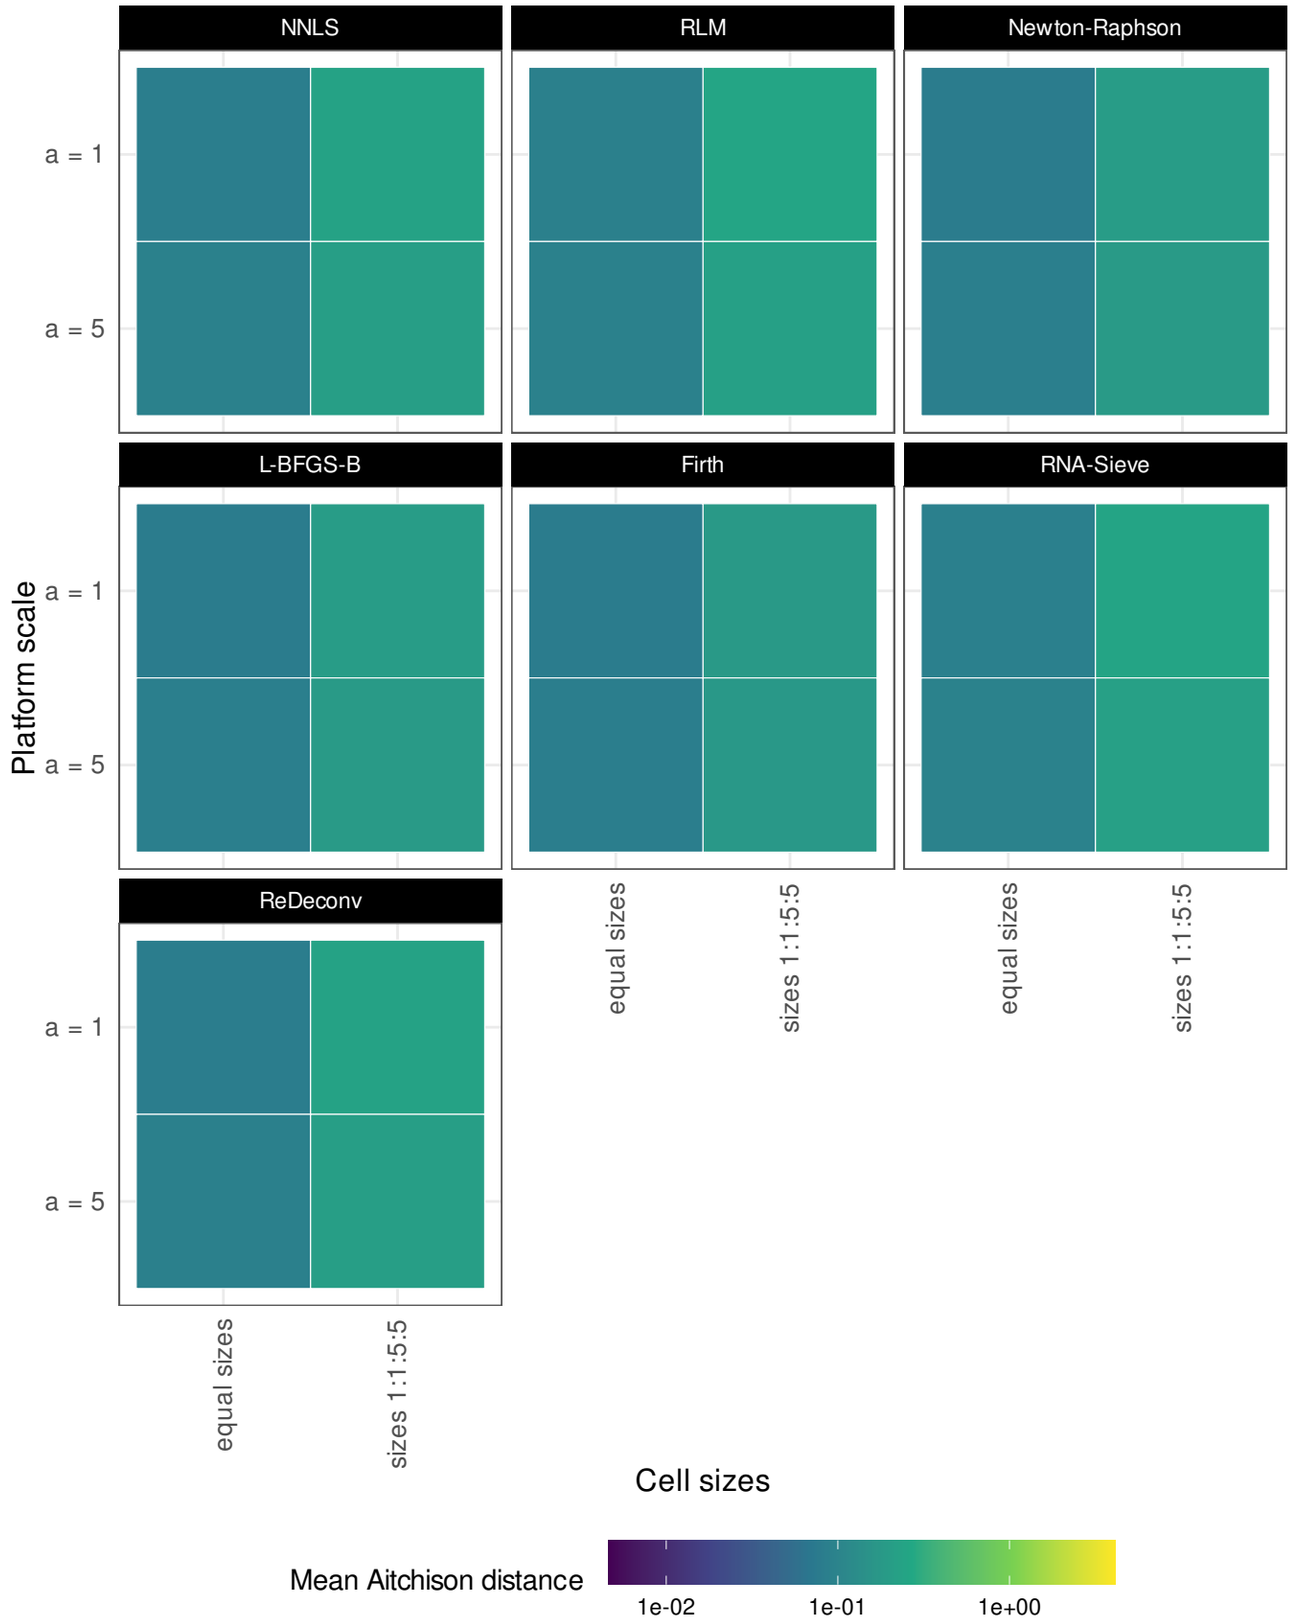

G = 20 / 1000 cells per bulk / balanced / high sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, Isei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

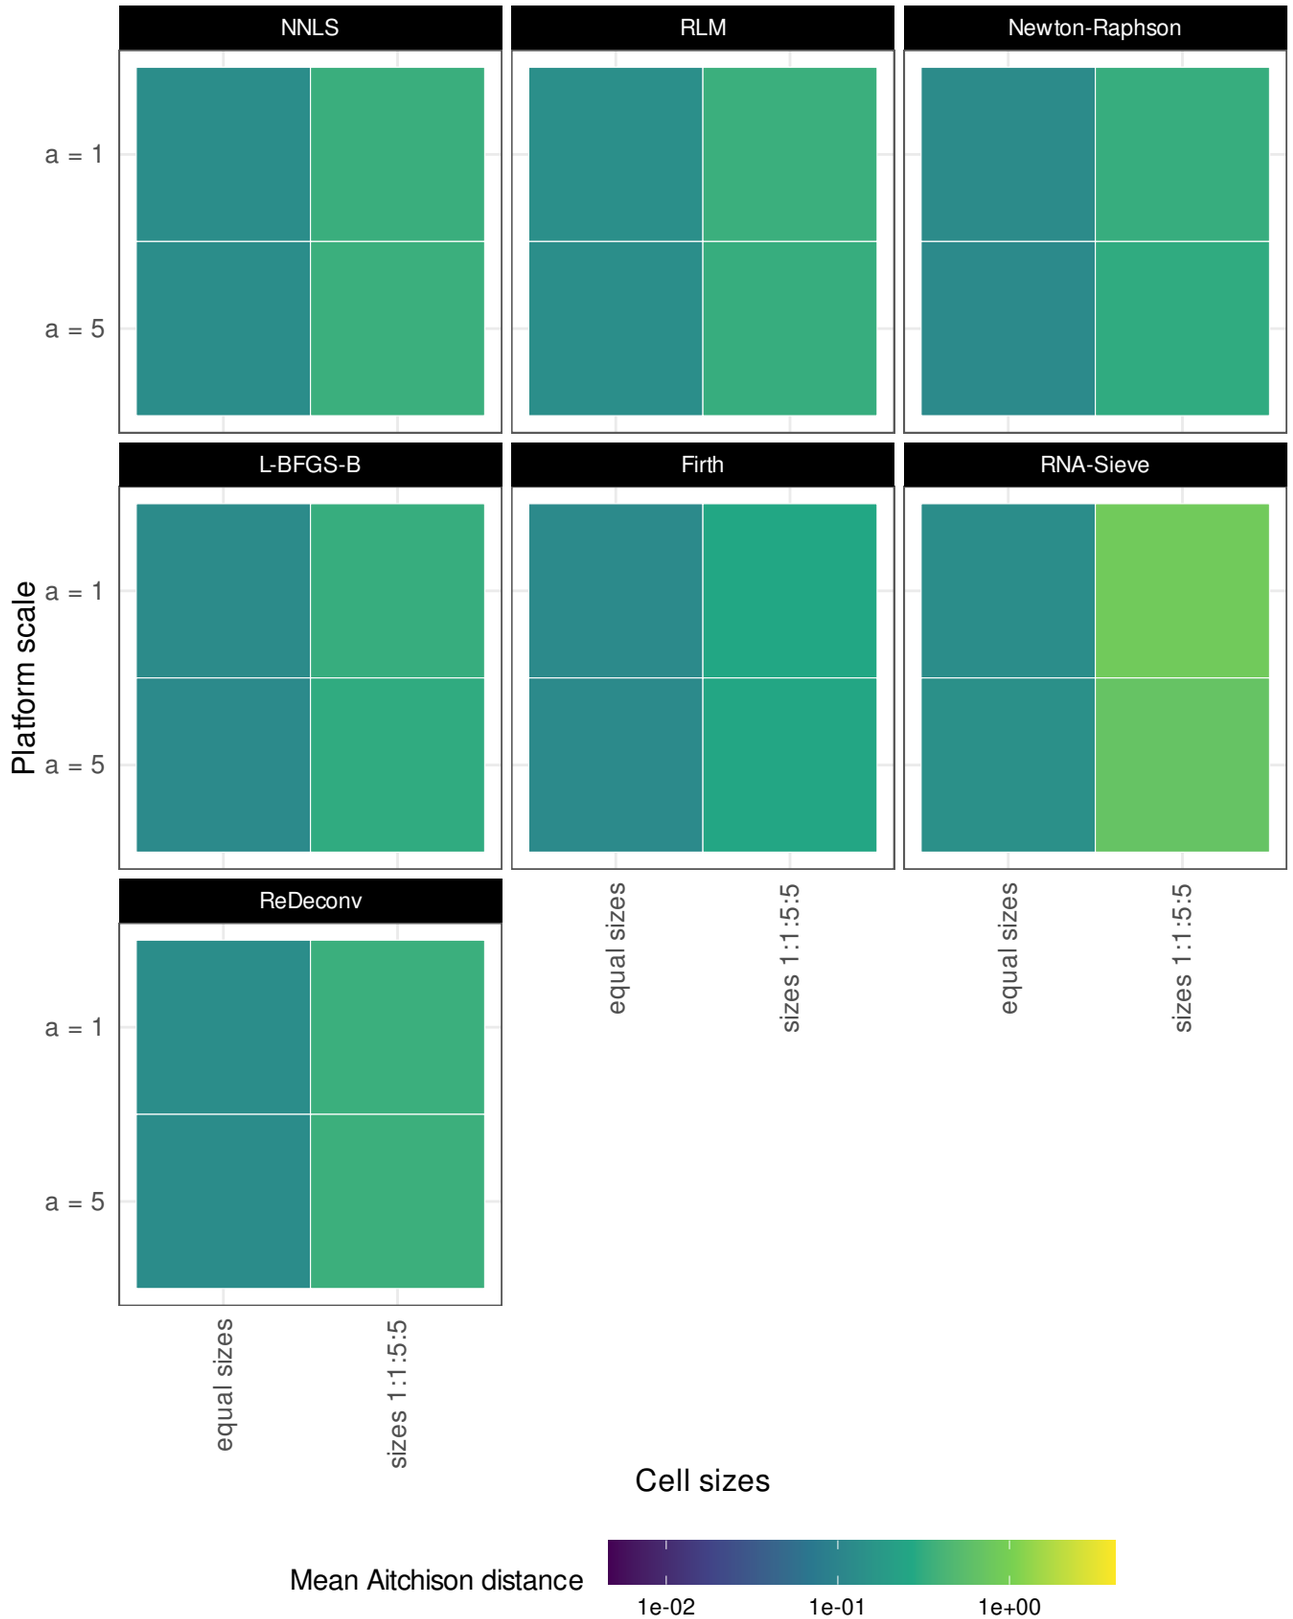

G = 20 / 1000 cells per bulk / unbalanced / low sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, lsei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

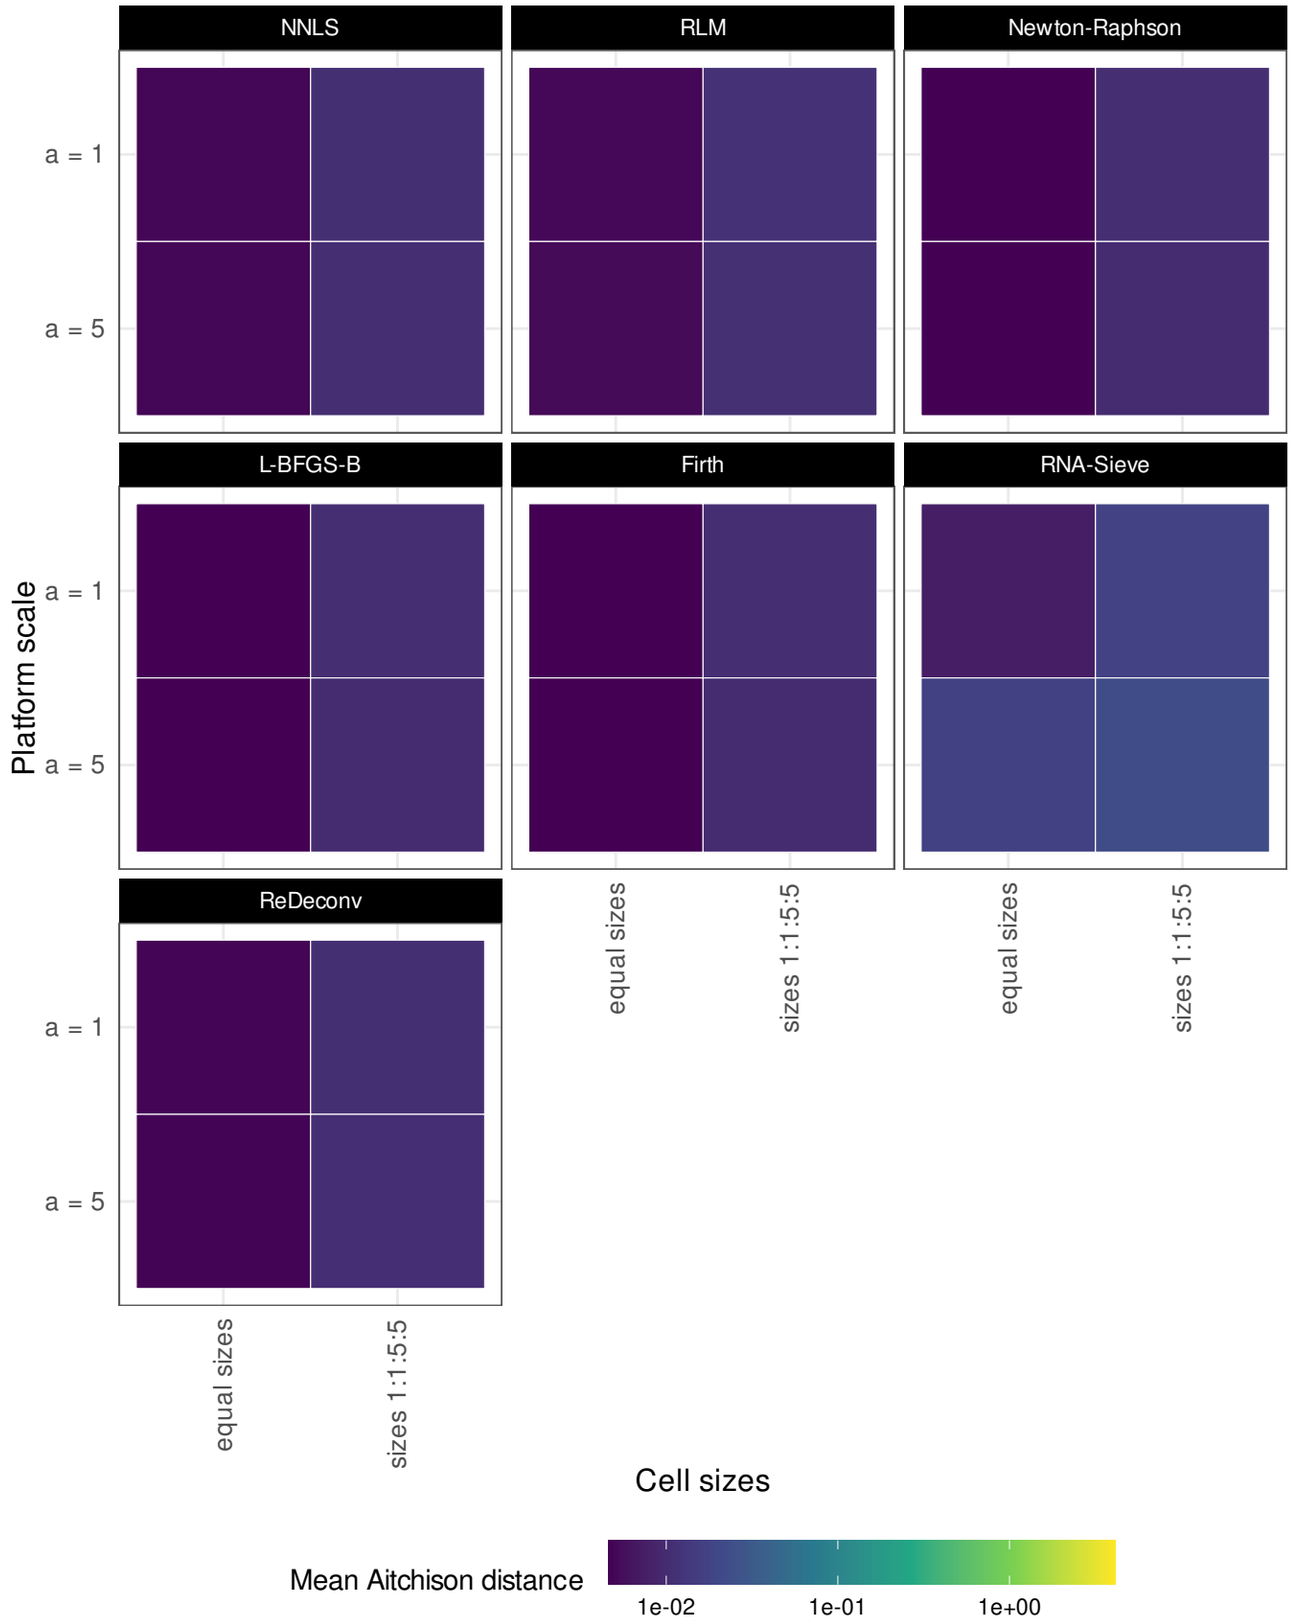

G = 20 / 1000 cells per bulk / unbalanced / high sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, lsei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

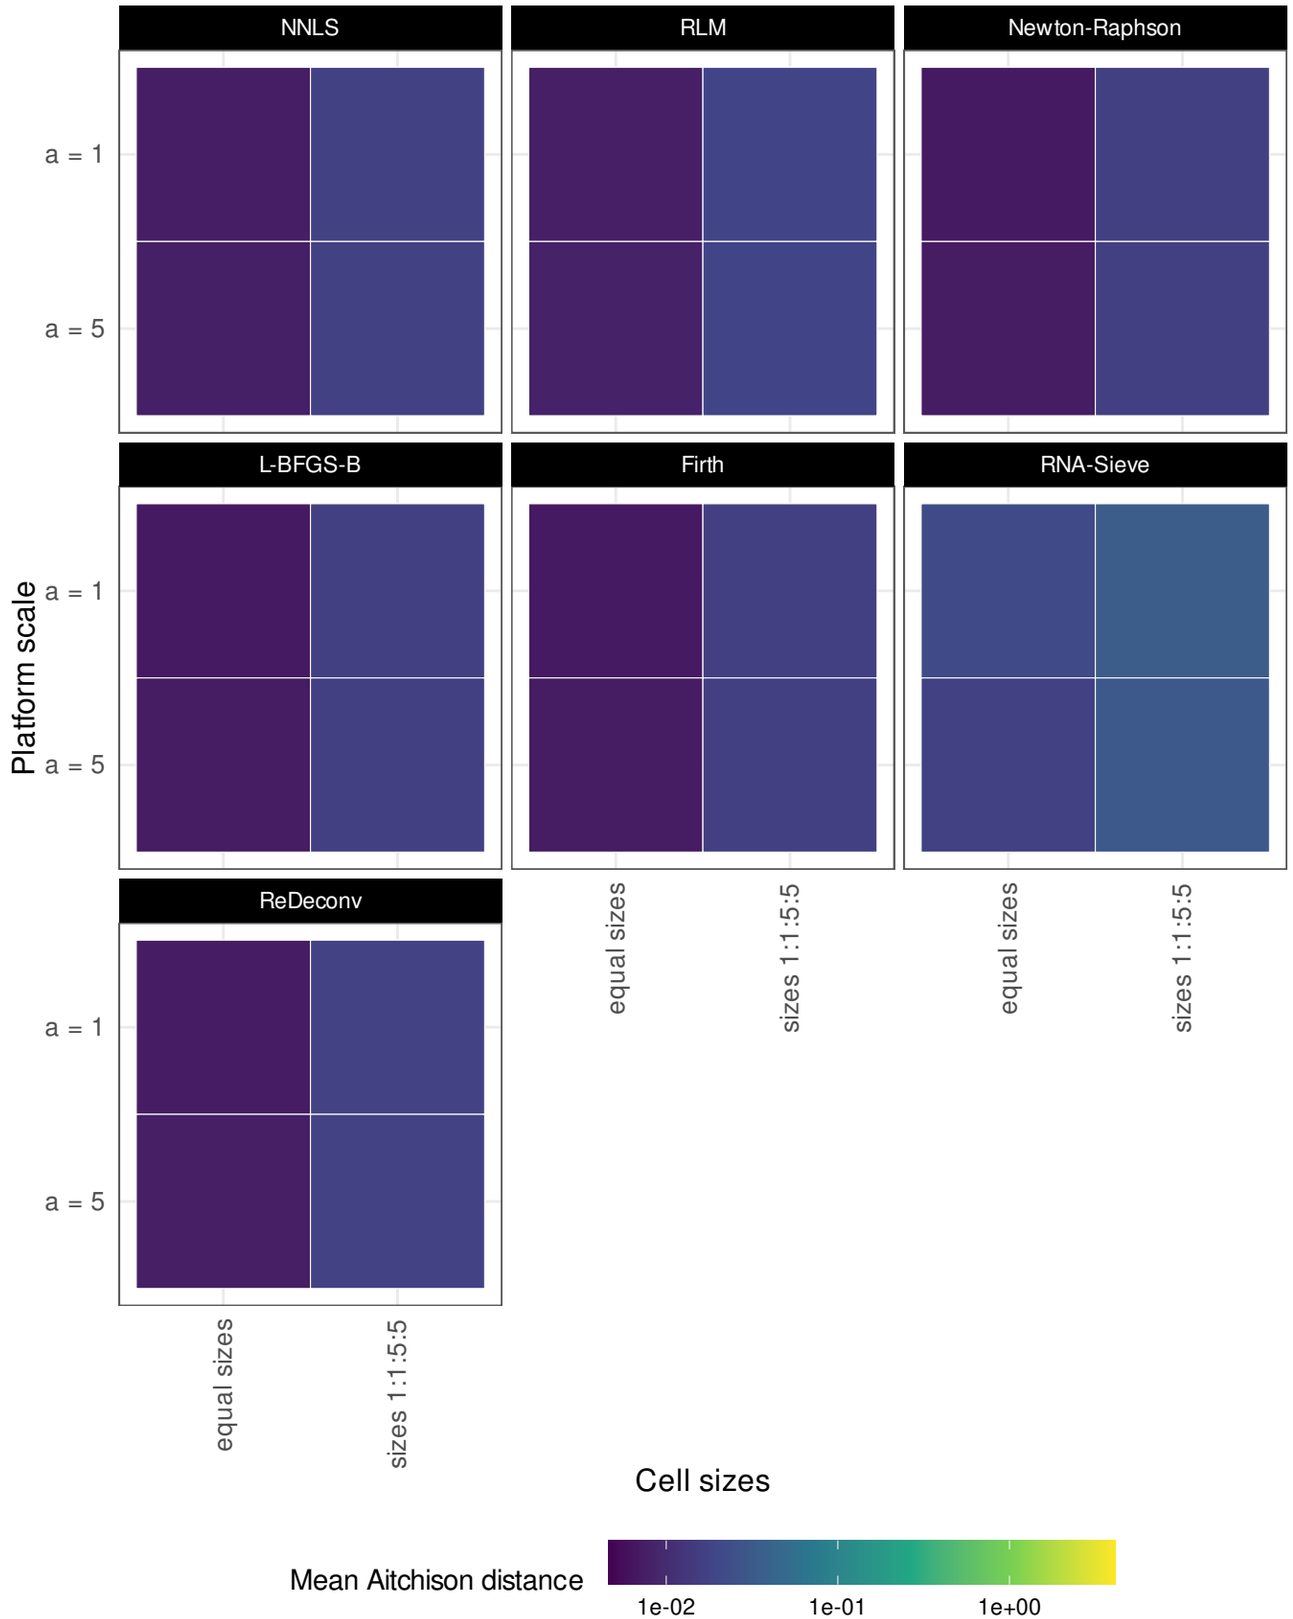

G = 20 / 1e+05 cells per bulk / balanced / low sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, Isei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

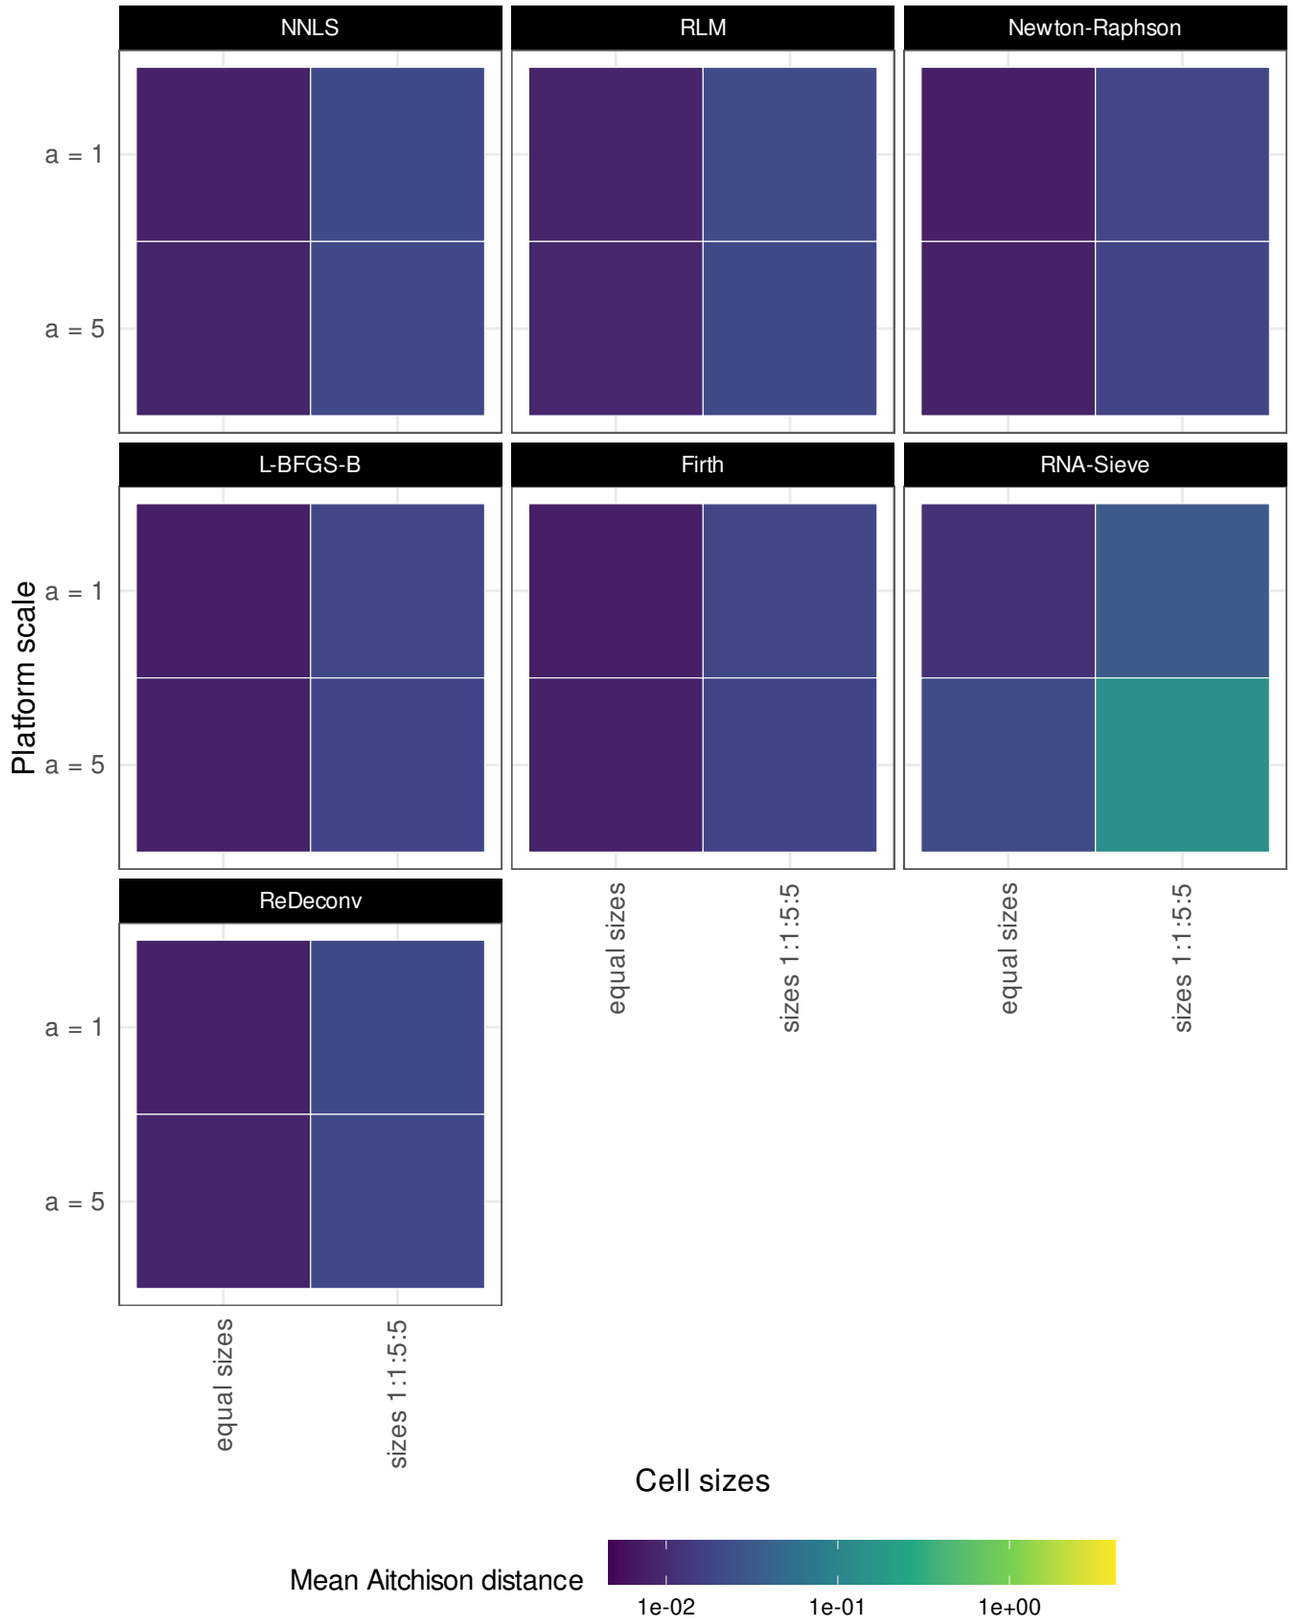

G = 20 / 1e+05 cells per bulk / balanced / high sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, lsei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

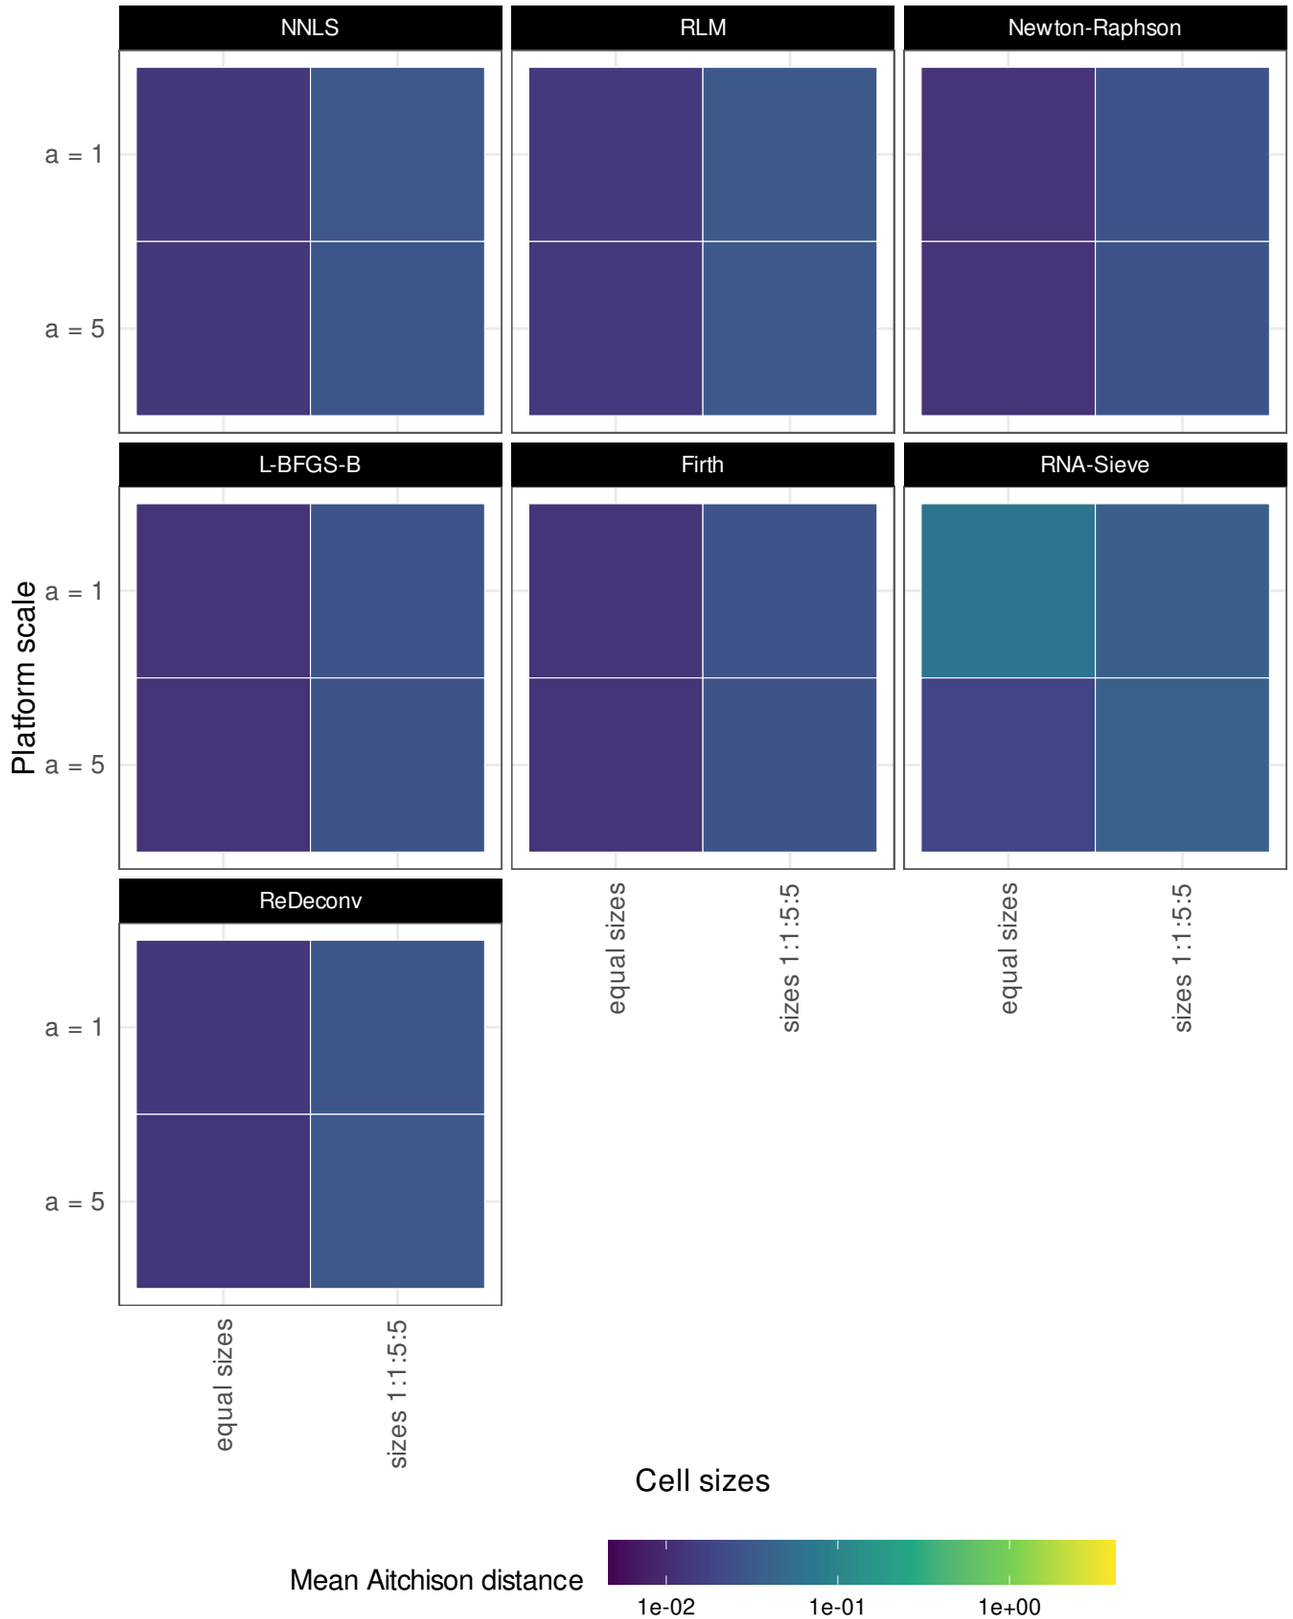

G = 20 / 1e+05 cells per bulk / unbalanced / low sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, lsei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

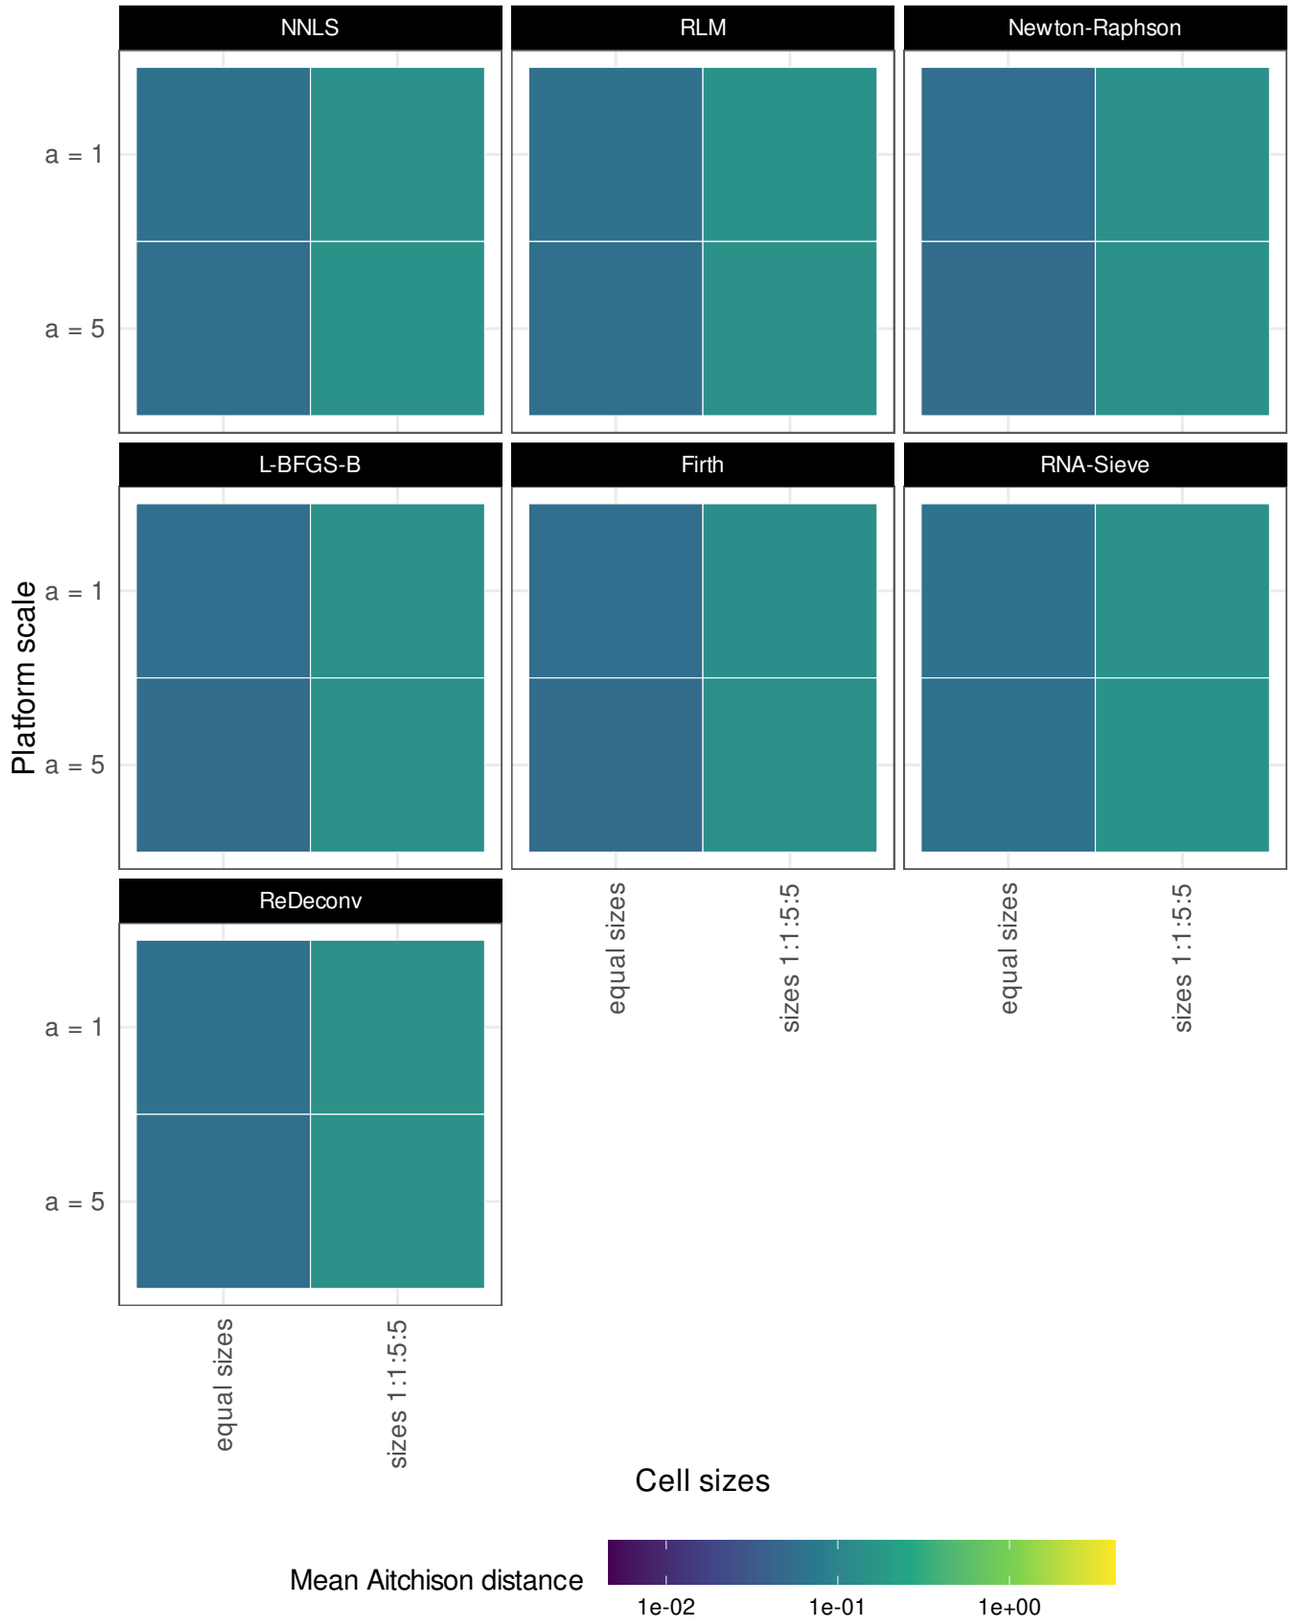

G = 20 / 1e+05 cells per bulk / unbalanced / high sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, lsei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

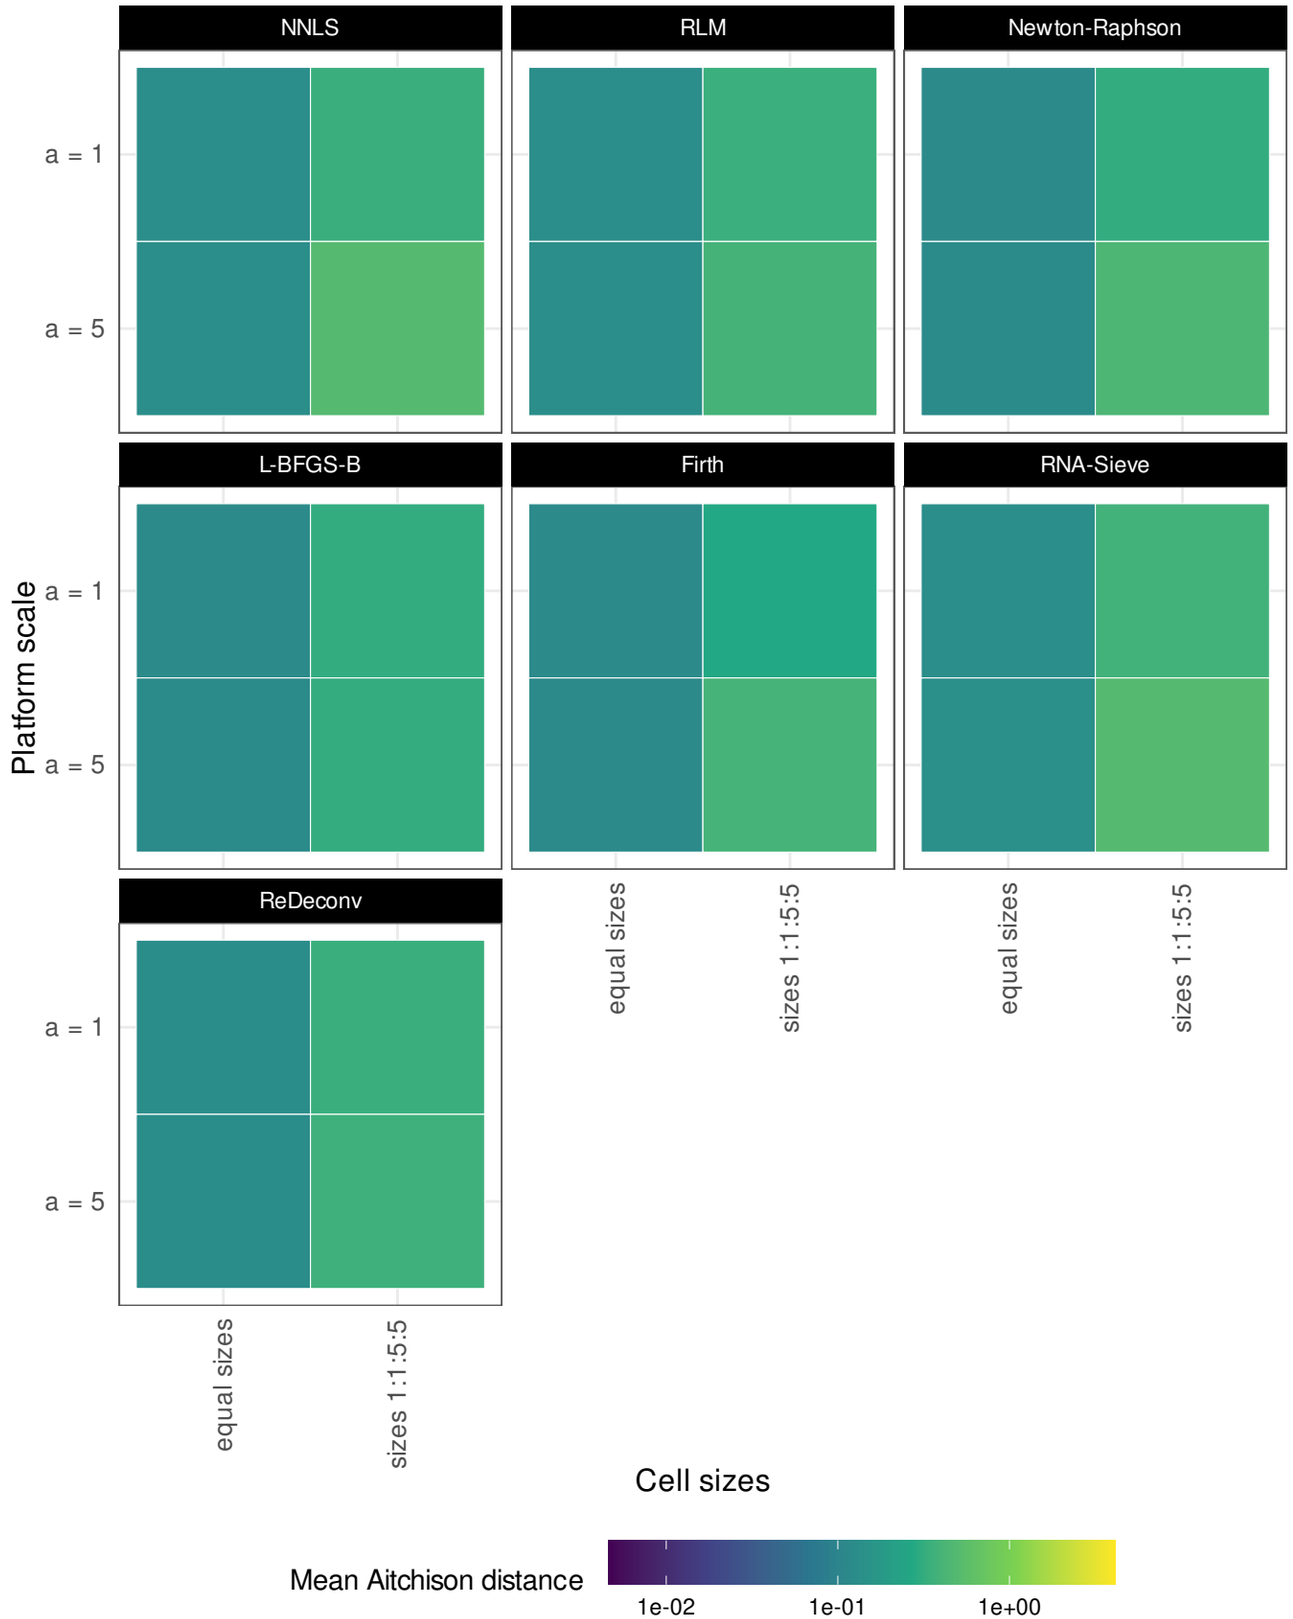

G = 200 / 1000 cells per bulk / balanced / low sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, lsei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

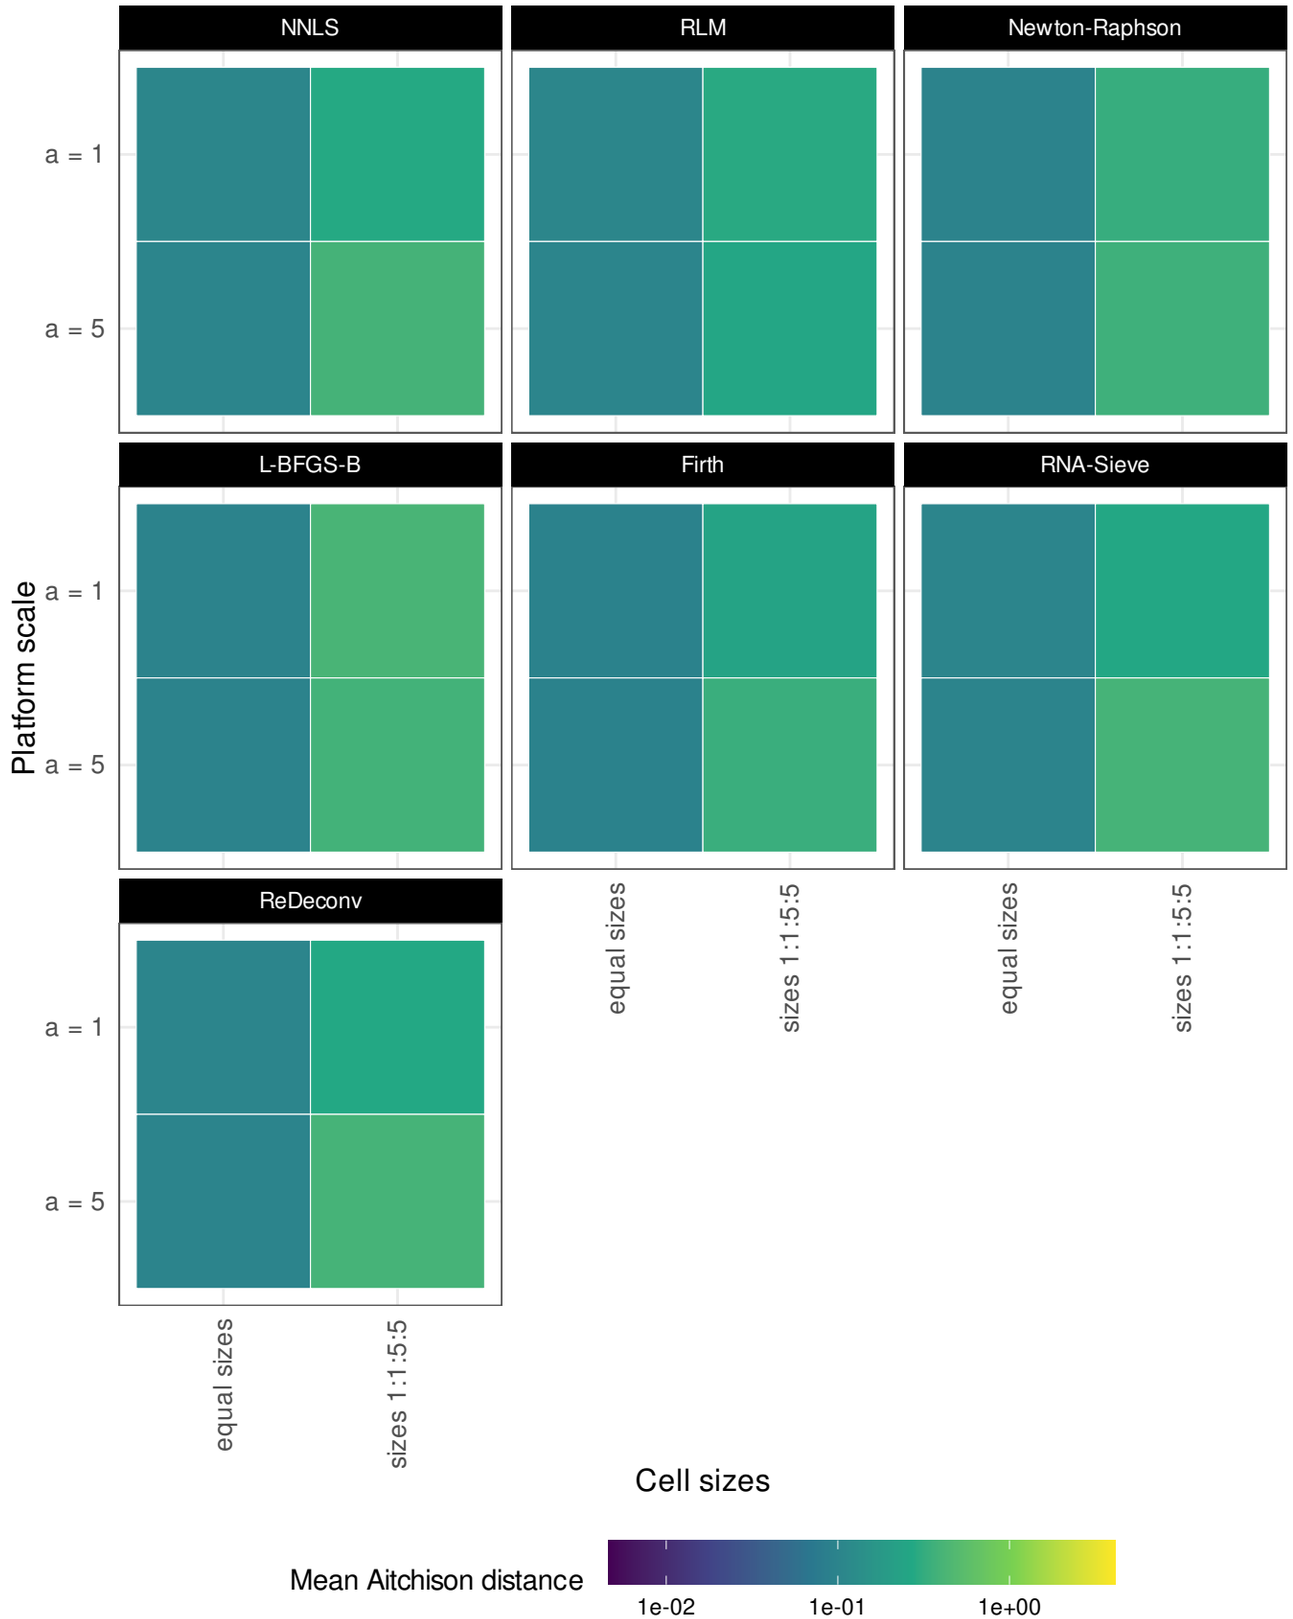

G = 200 / 1000 cells per bulk / balanced / high sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, lsei, MEAD not shown: its much larger error would squeeze the shared scale.

Mean Aitchison distance of every method

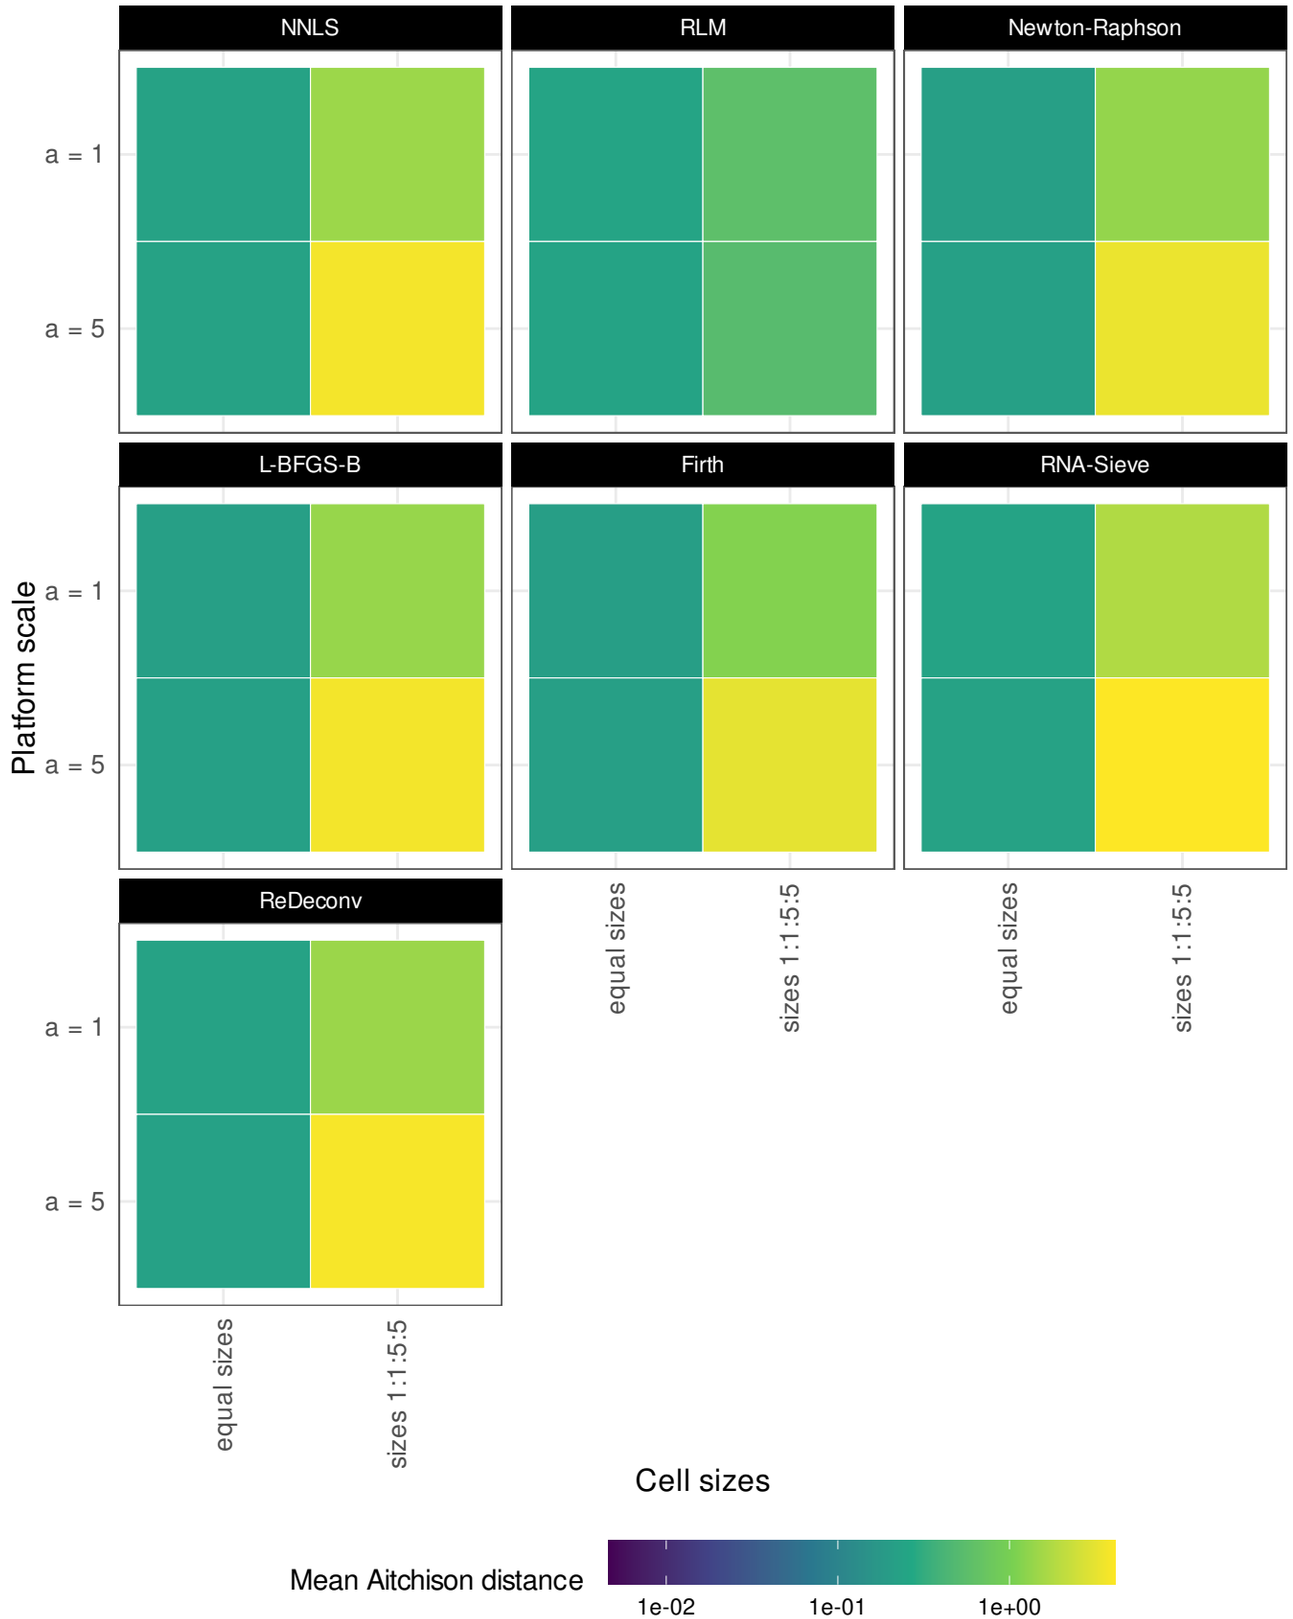

G = 200 / 1000 cells per bulk / unbalanced / low sibling overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
CIBERSORT, Isei, MEAD not shown: its much larger error would squeeze the shared scale.
