small_CLD / homoscedastic / moderately unbalanced

small_CLD / homoscedastic / highly unbalanced

small_CLD / heteroscedastic / balanced

Ward D2 hierarchical clustering of $d = 1 - \text{Pearson } r$ (hclust(as.dist(1 - cor(X)), method = "ward.D2")). Branch labels are Ward merge heights.

small_CLD / heteroscedastic / moderately unbalanced

Ward D2 hierarchical clustering of $d = 1 - \text{Pearson } r$ ($\text{hclust}(\text{as.dist}(1 - \text{cor}(X))), \text{method} = \text{"ward.D2"}$). Branch labels are Ward merge heights.

small_CLD / heteroscedastic / highly unbalanced

Ward D2 hierarchical clustering of $d = 1 - \text{Pearson } r$ (`hclust(as.dist(1 - cor(X)), method = "ward.D2")`). Branch labels are Ward merge heights.

large_CLD / homoscedastic / balanced

large_CLD / homoscedastic / moderately unbalanced

Ward D2 hierarchical clustering of $d = 1 - \text{Pearson } r$ ($\text{hclust}(\text{as.dist}(1 - \text{cor}(X)), \text{method} = \text{"ward.D2"})$). Branch labels are Ward merge heights.
