Monte Carlo law of the estimates: 50 quantile dots

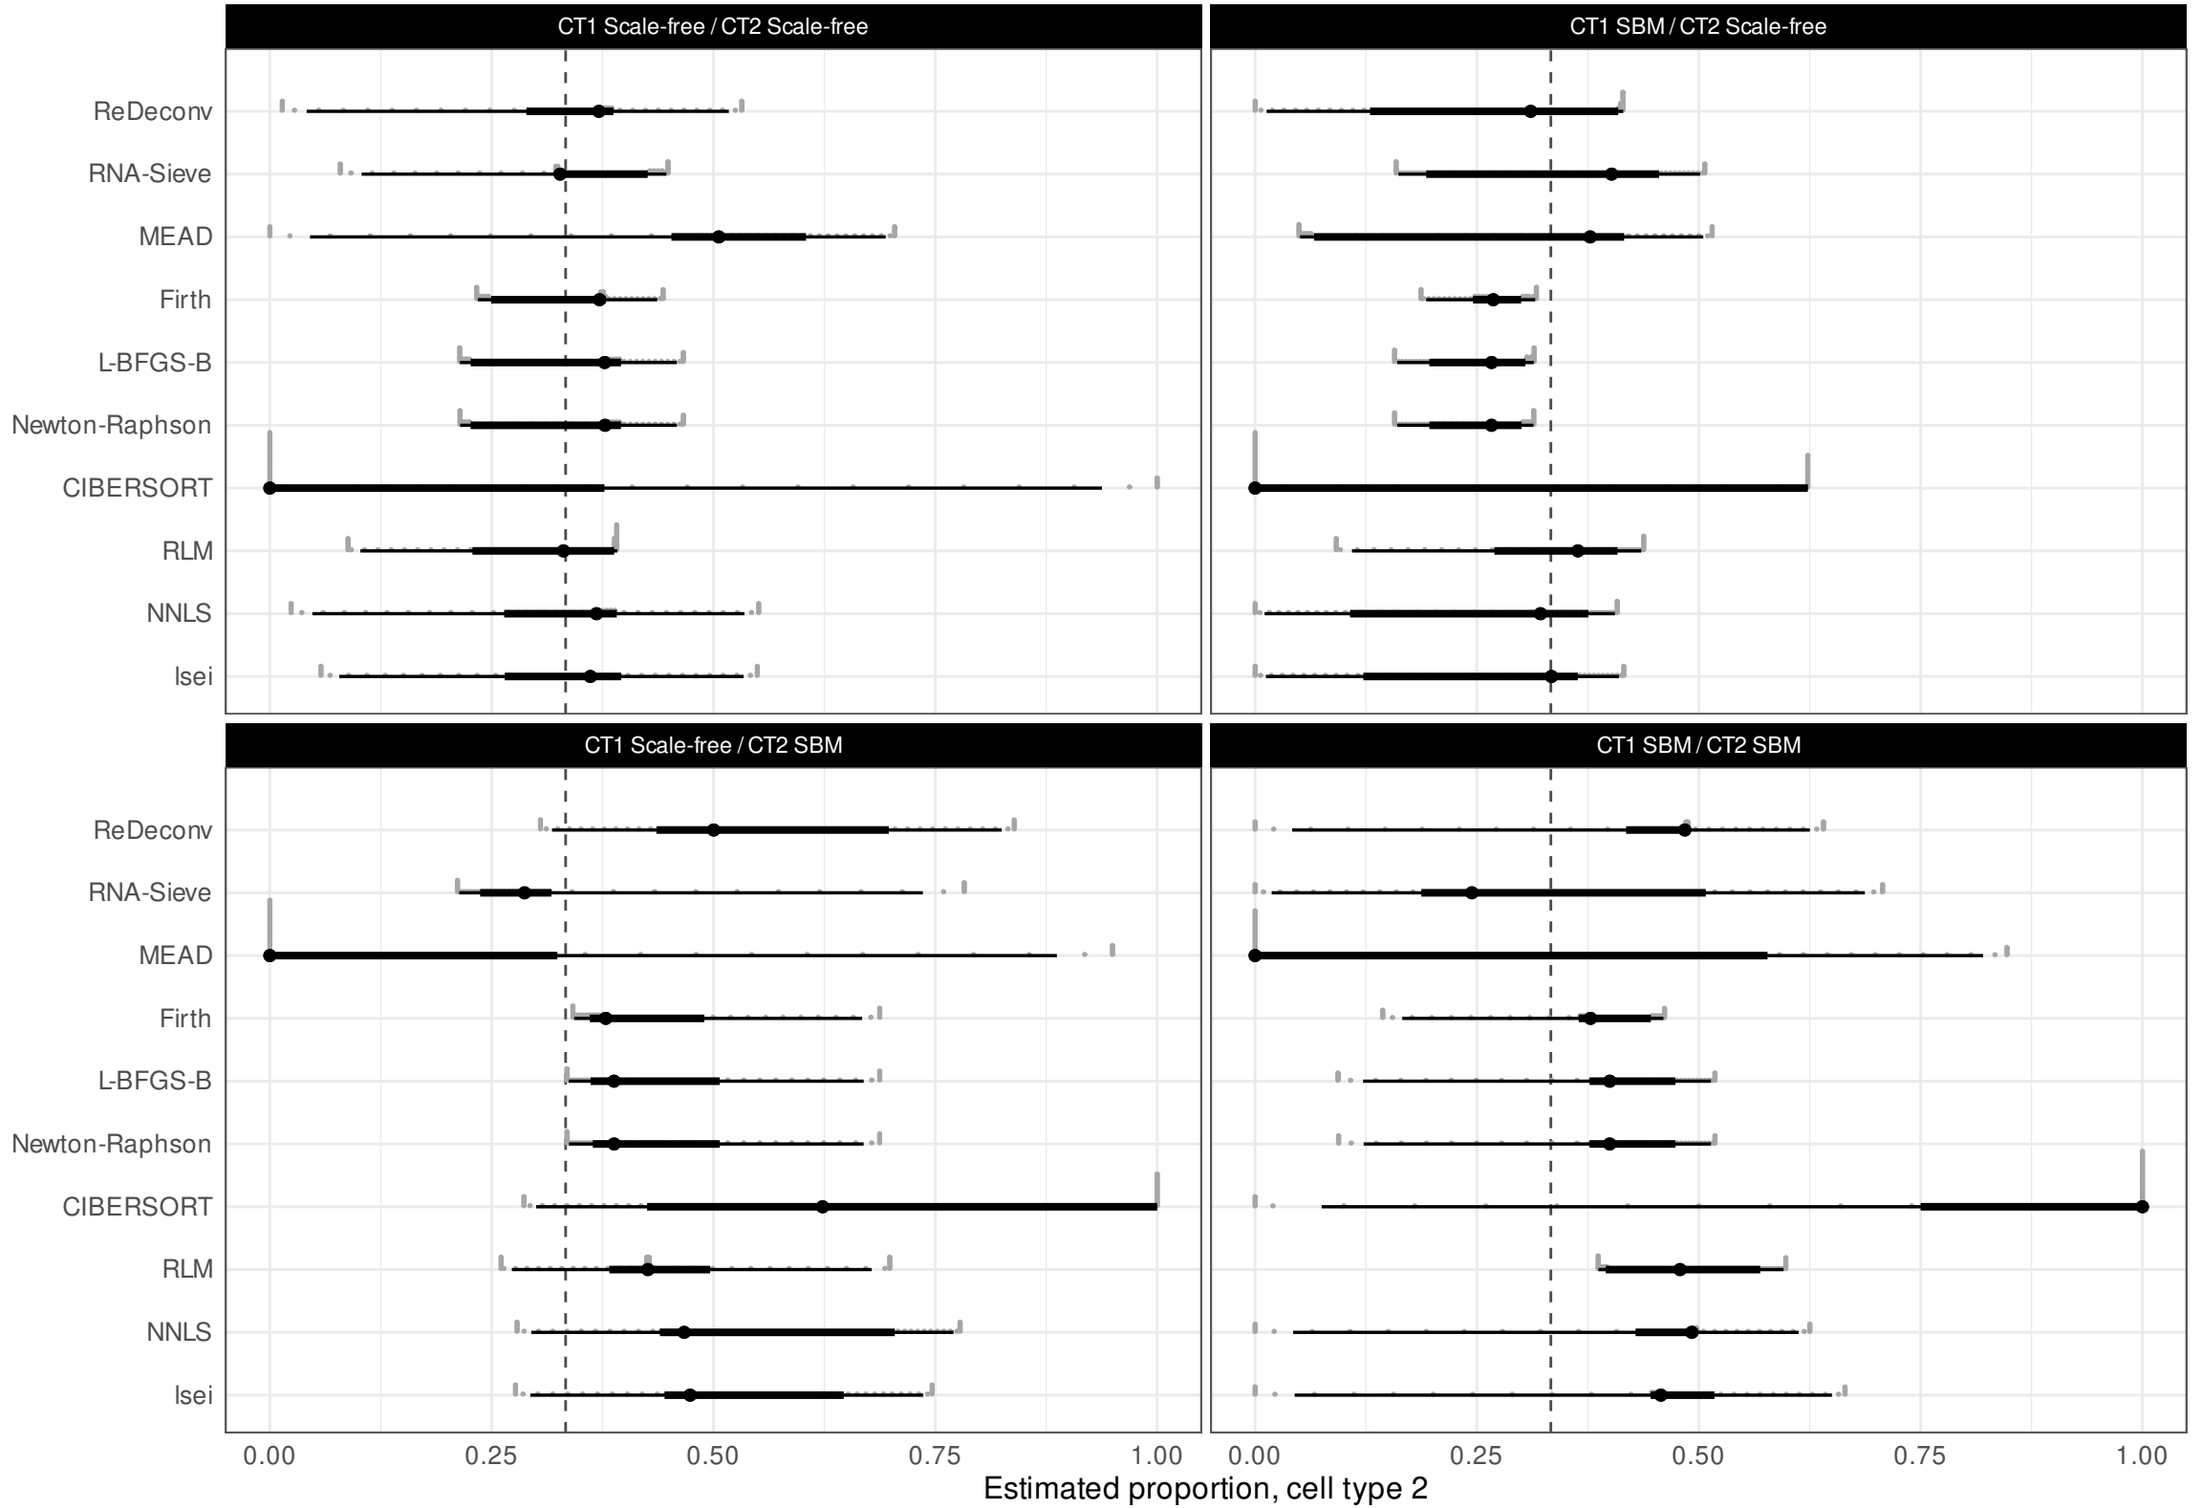

balanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

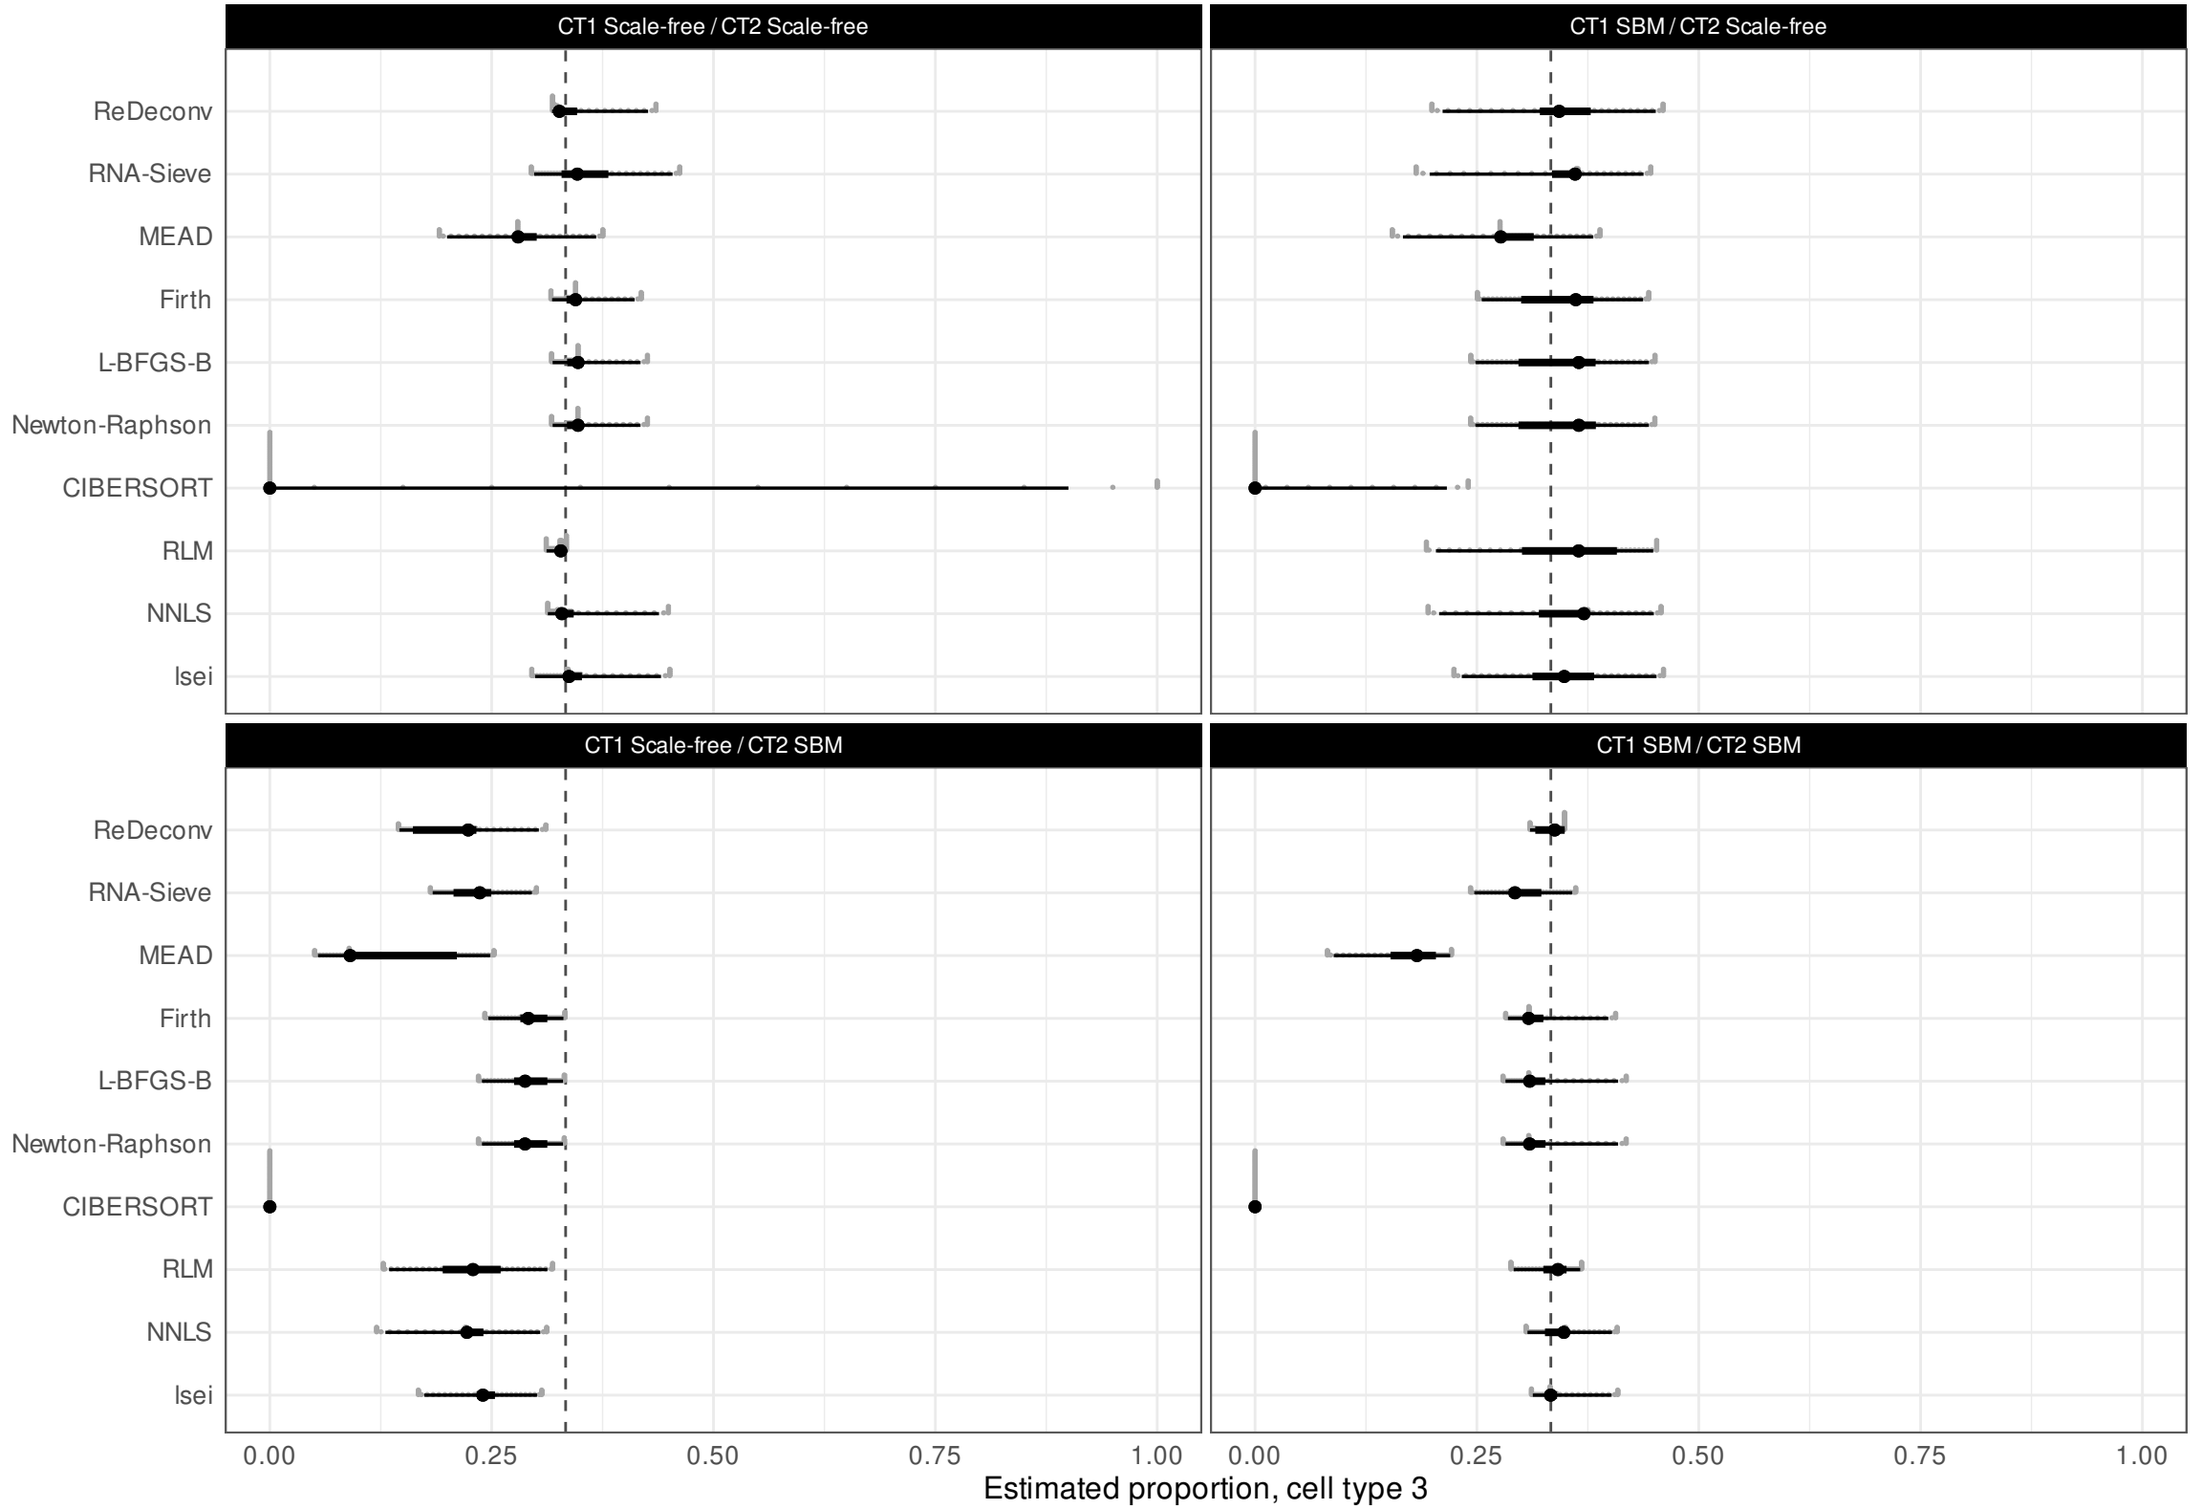

balanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

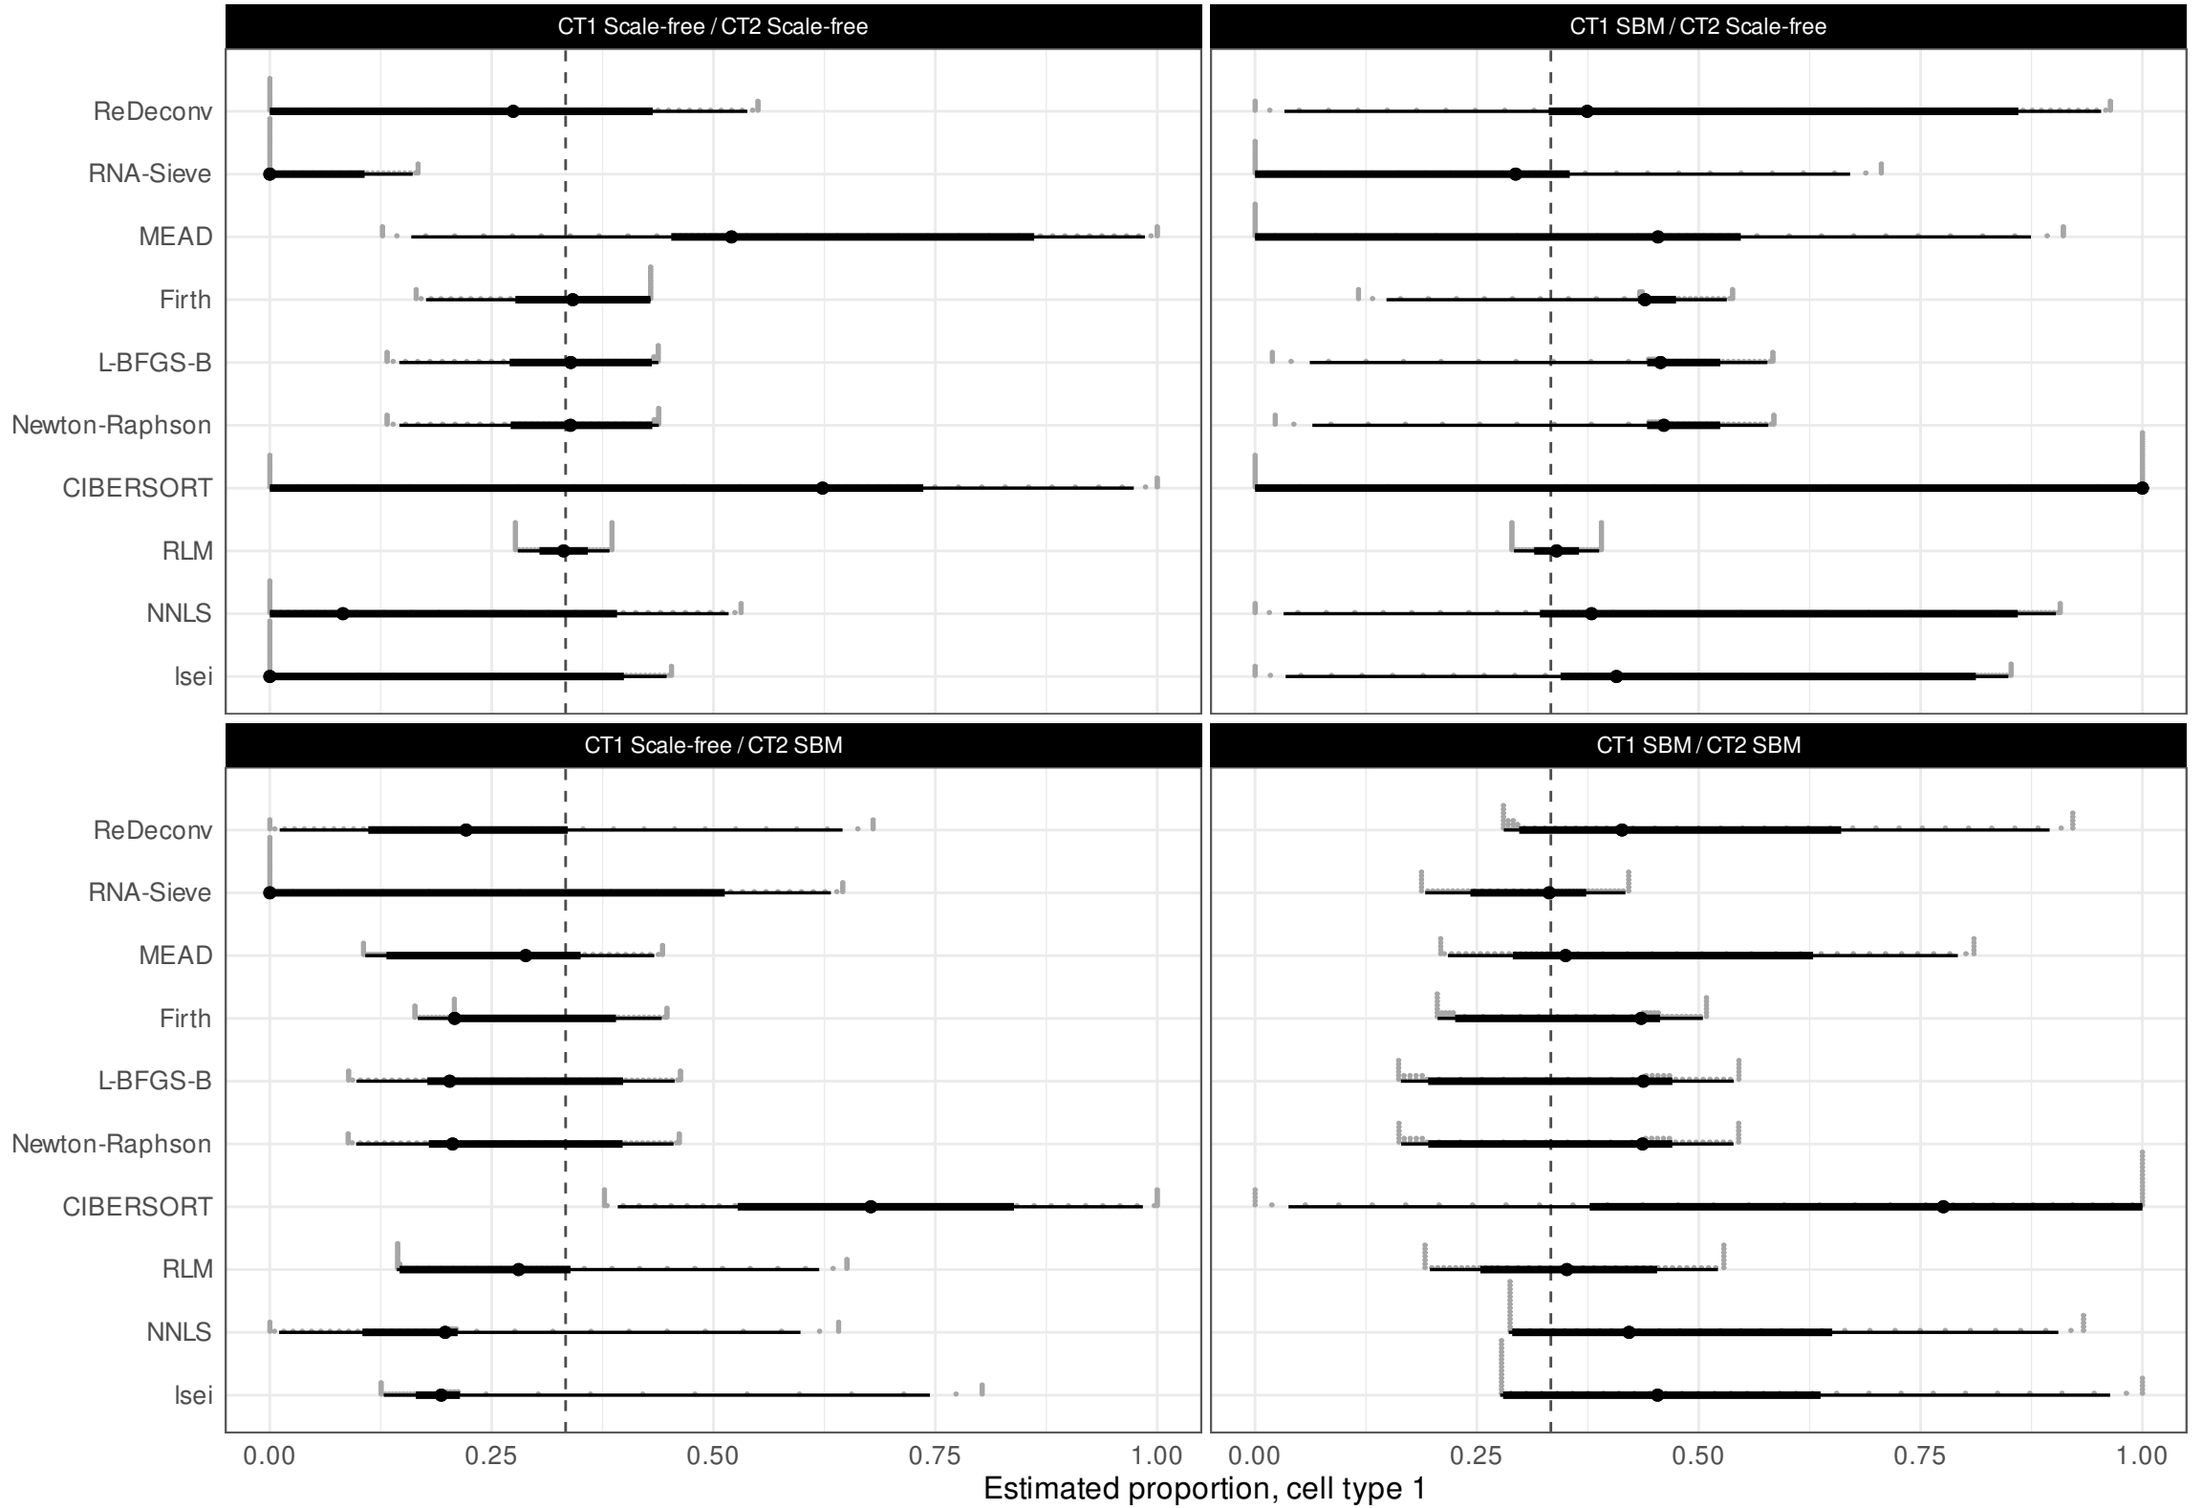

balanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

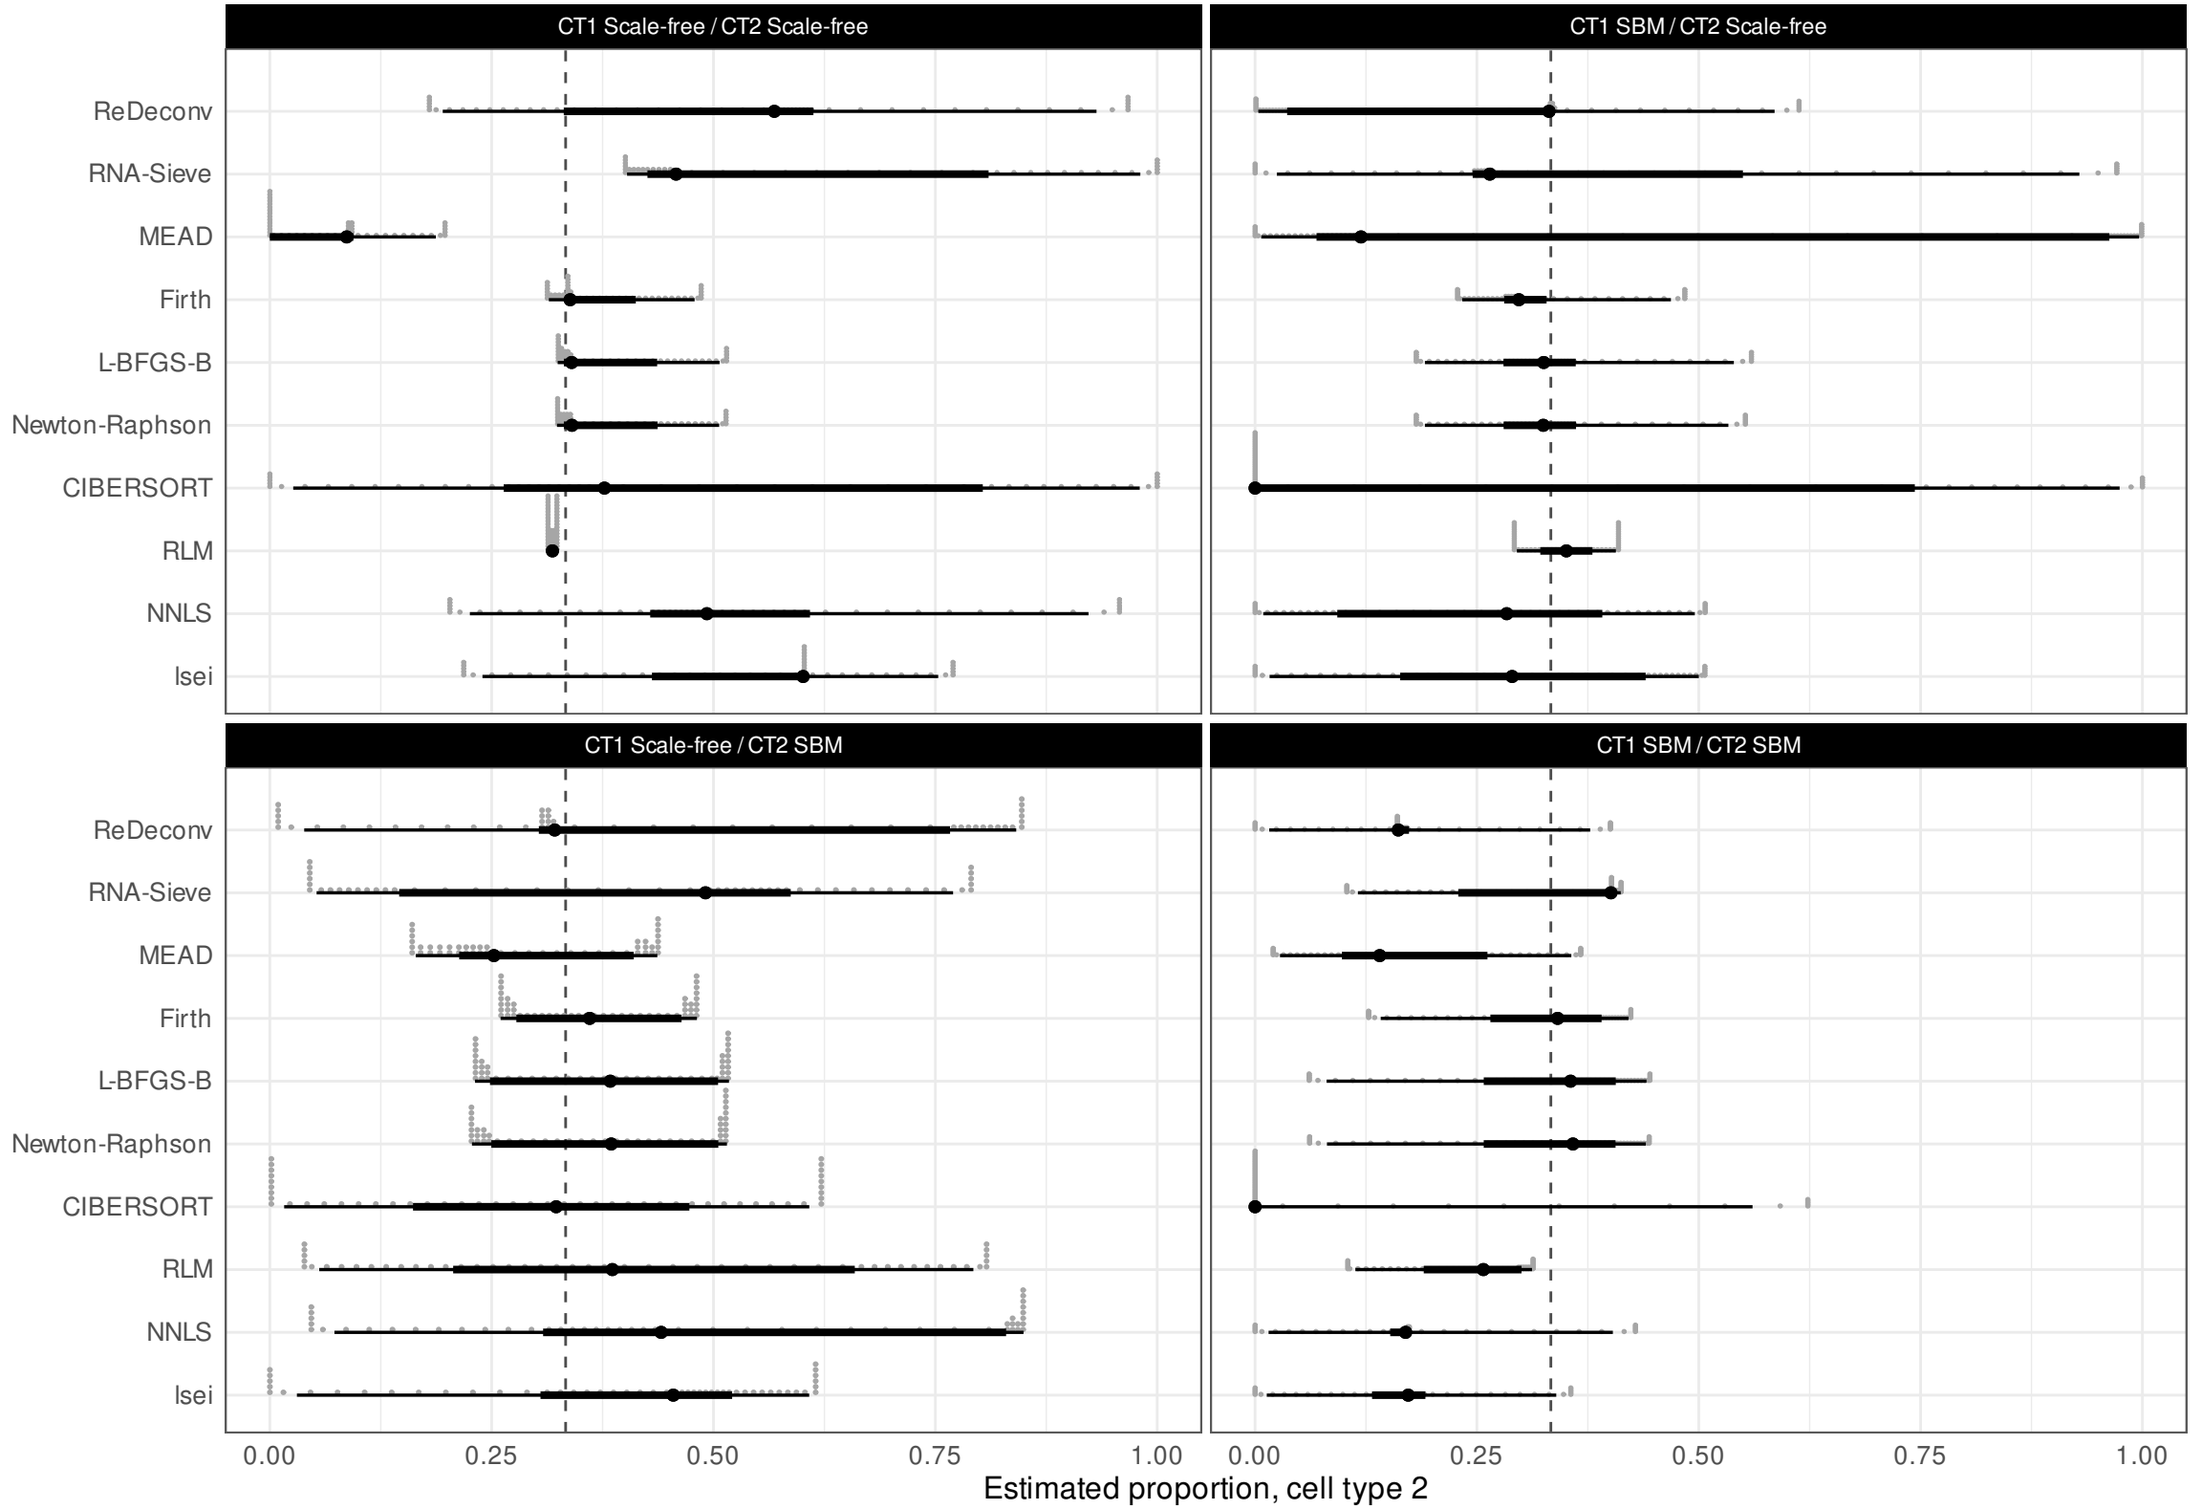

balanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

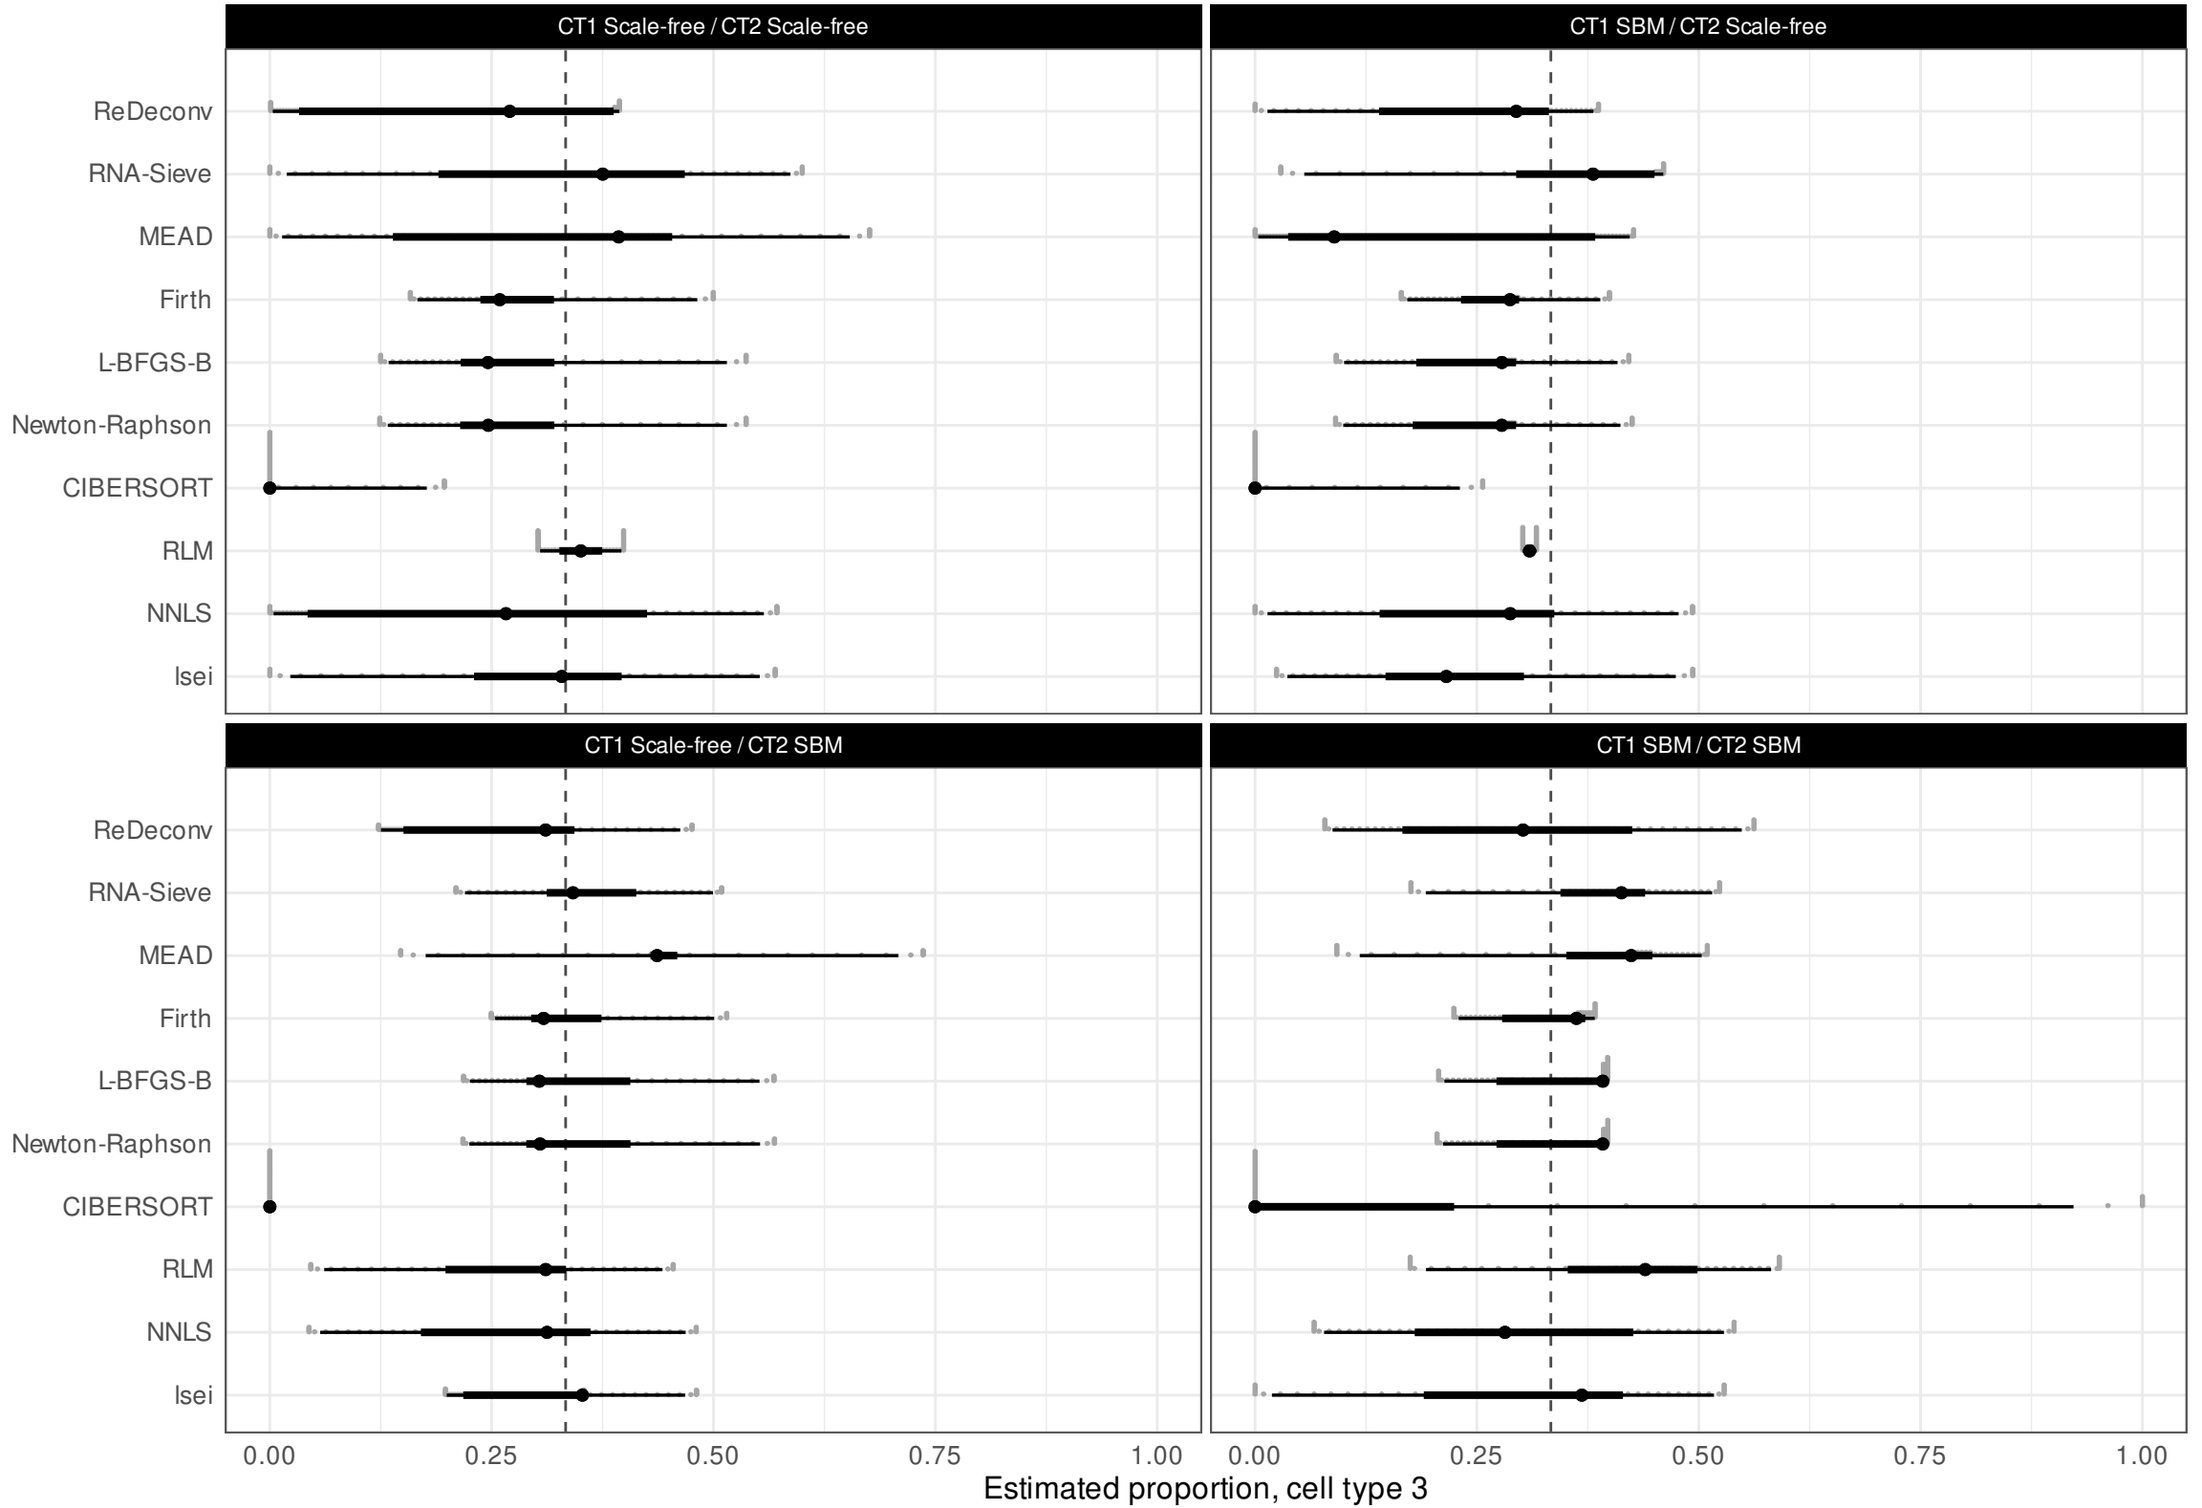

balanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

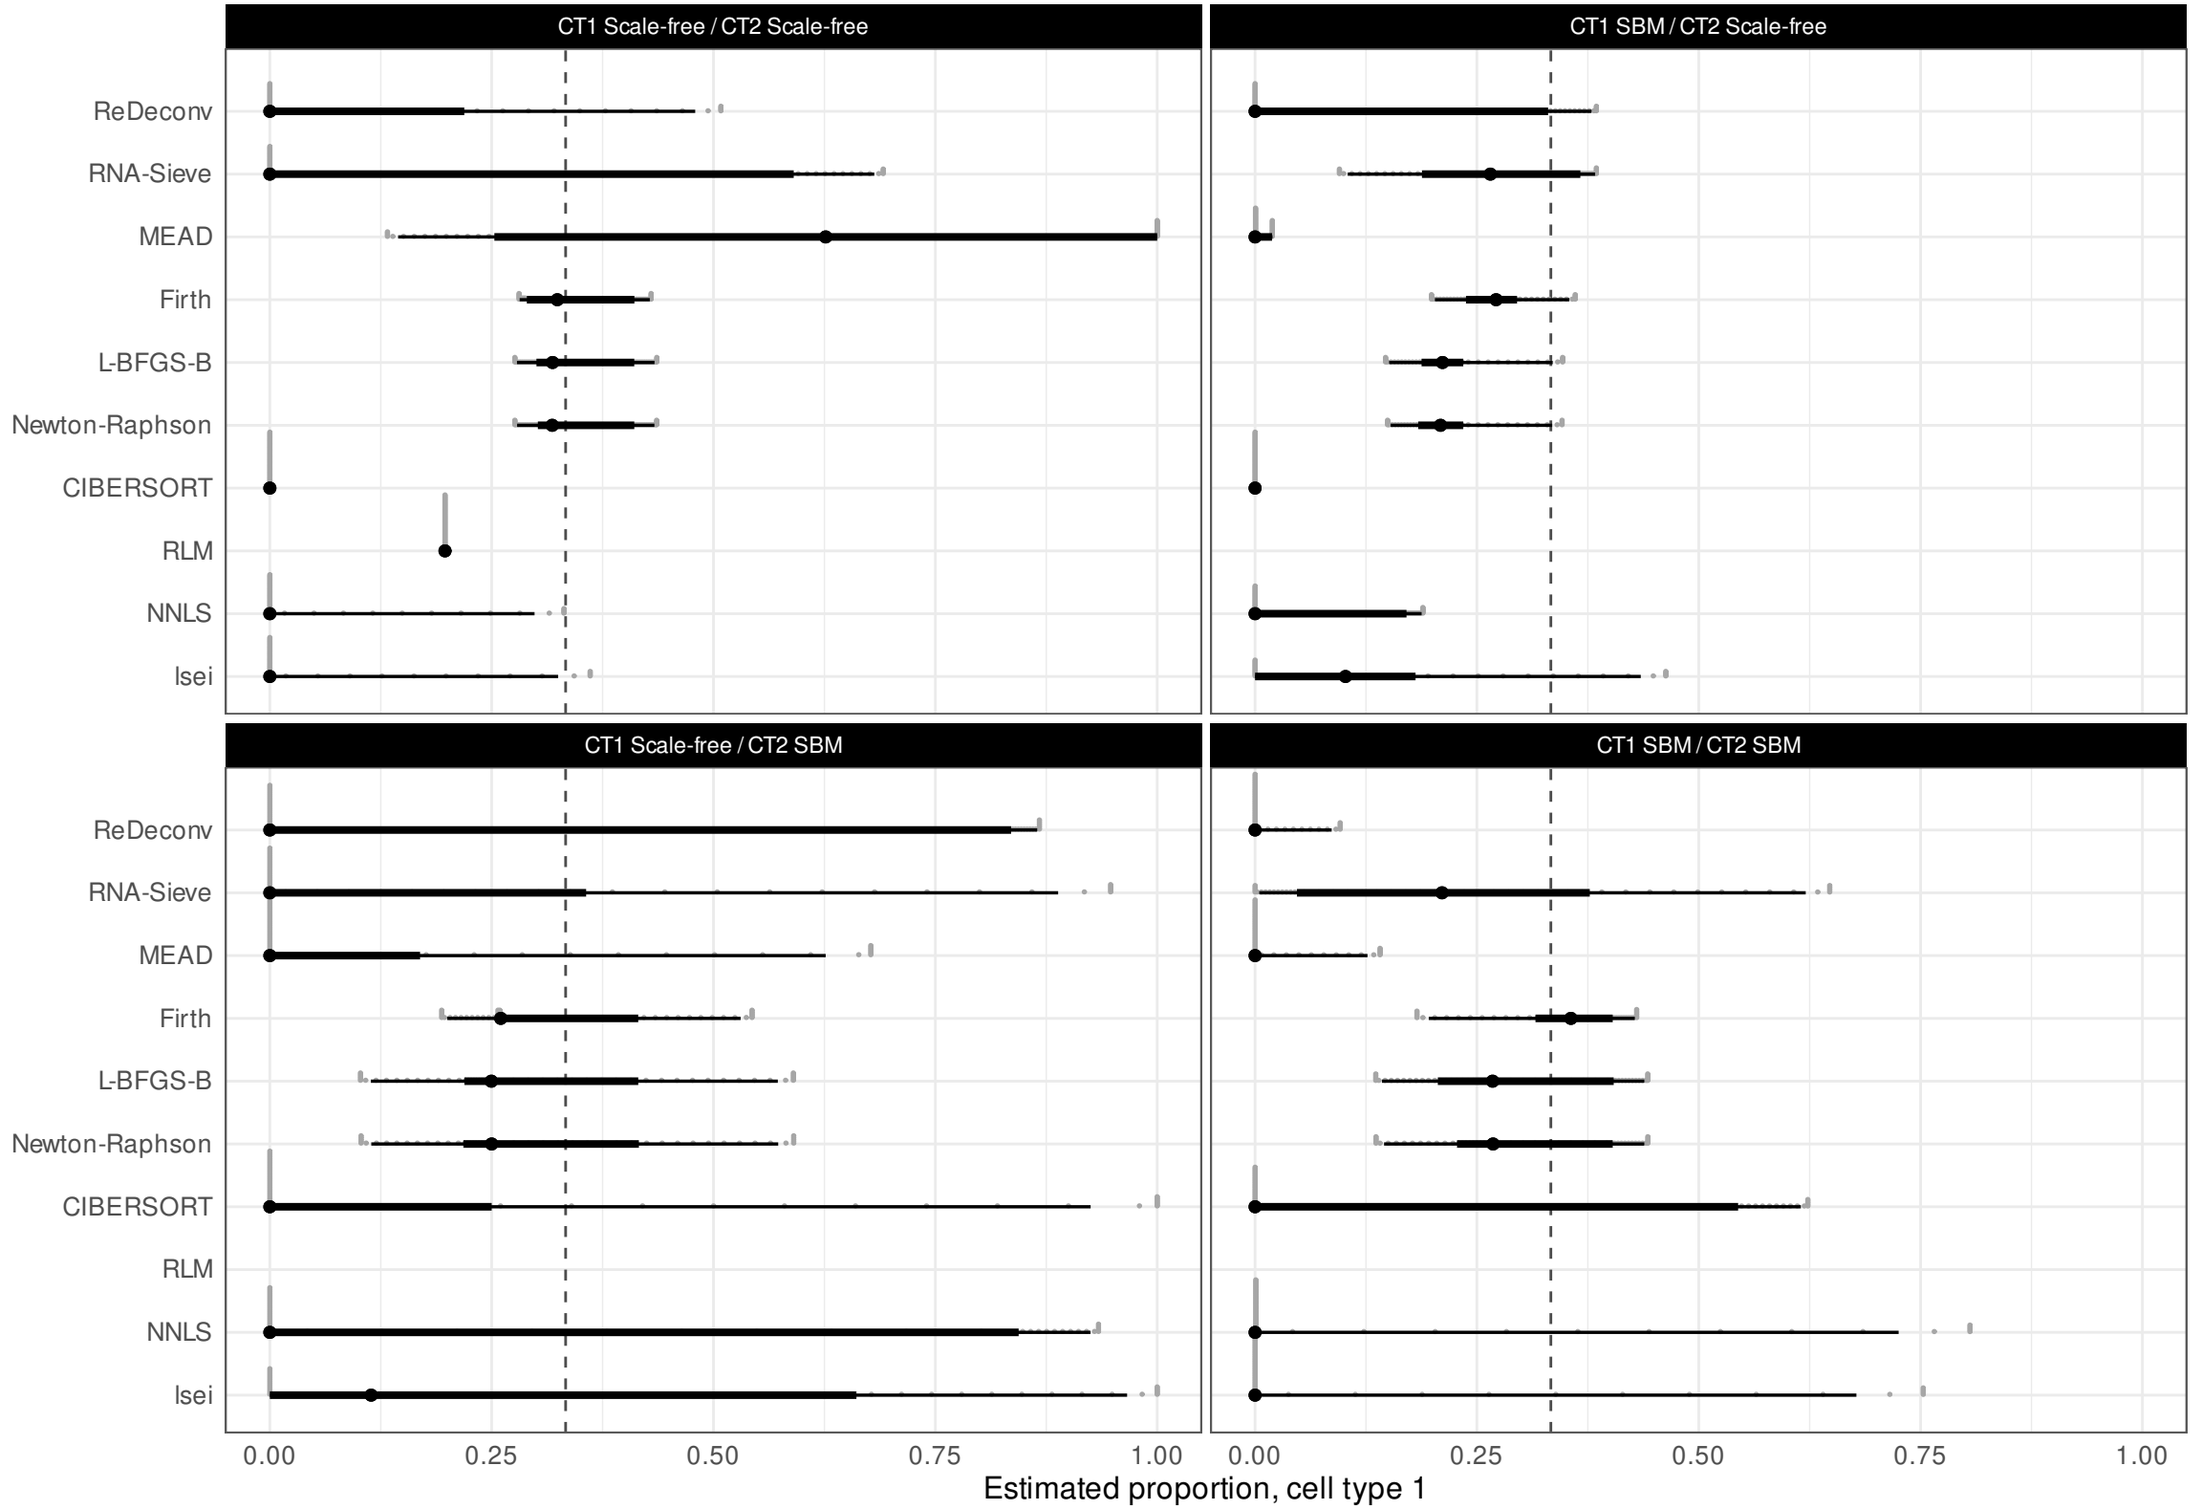

balanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

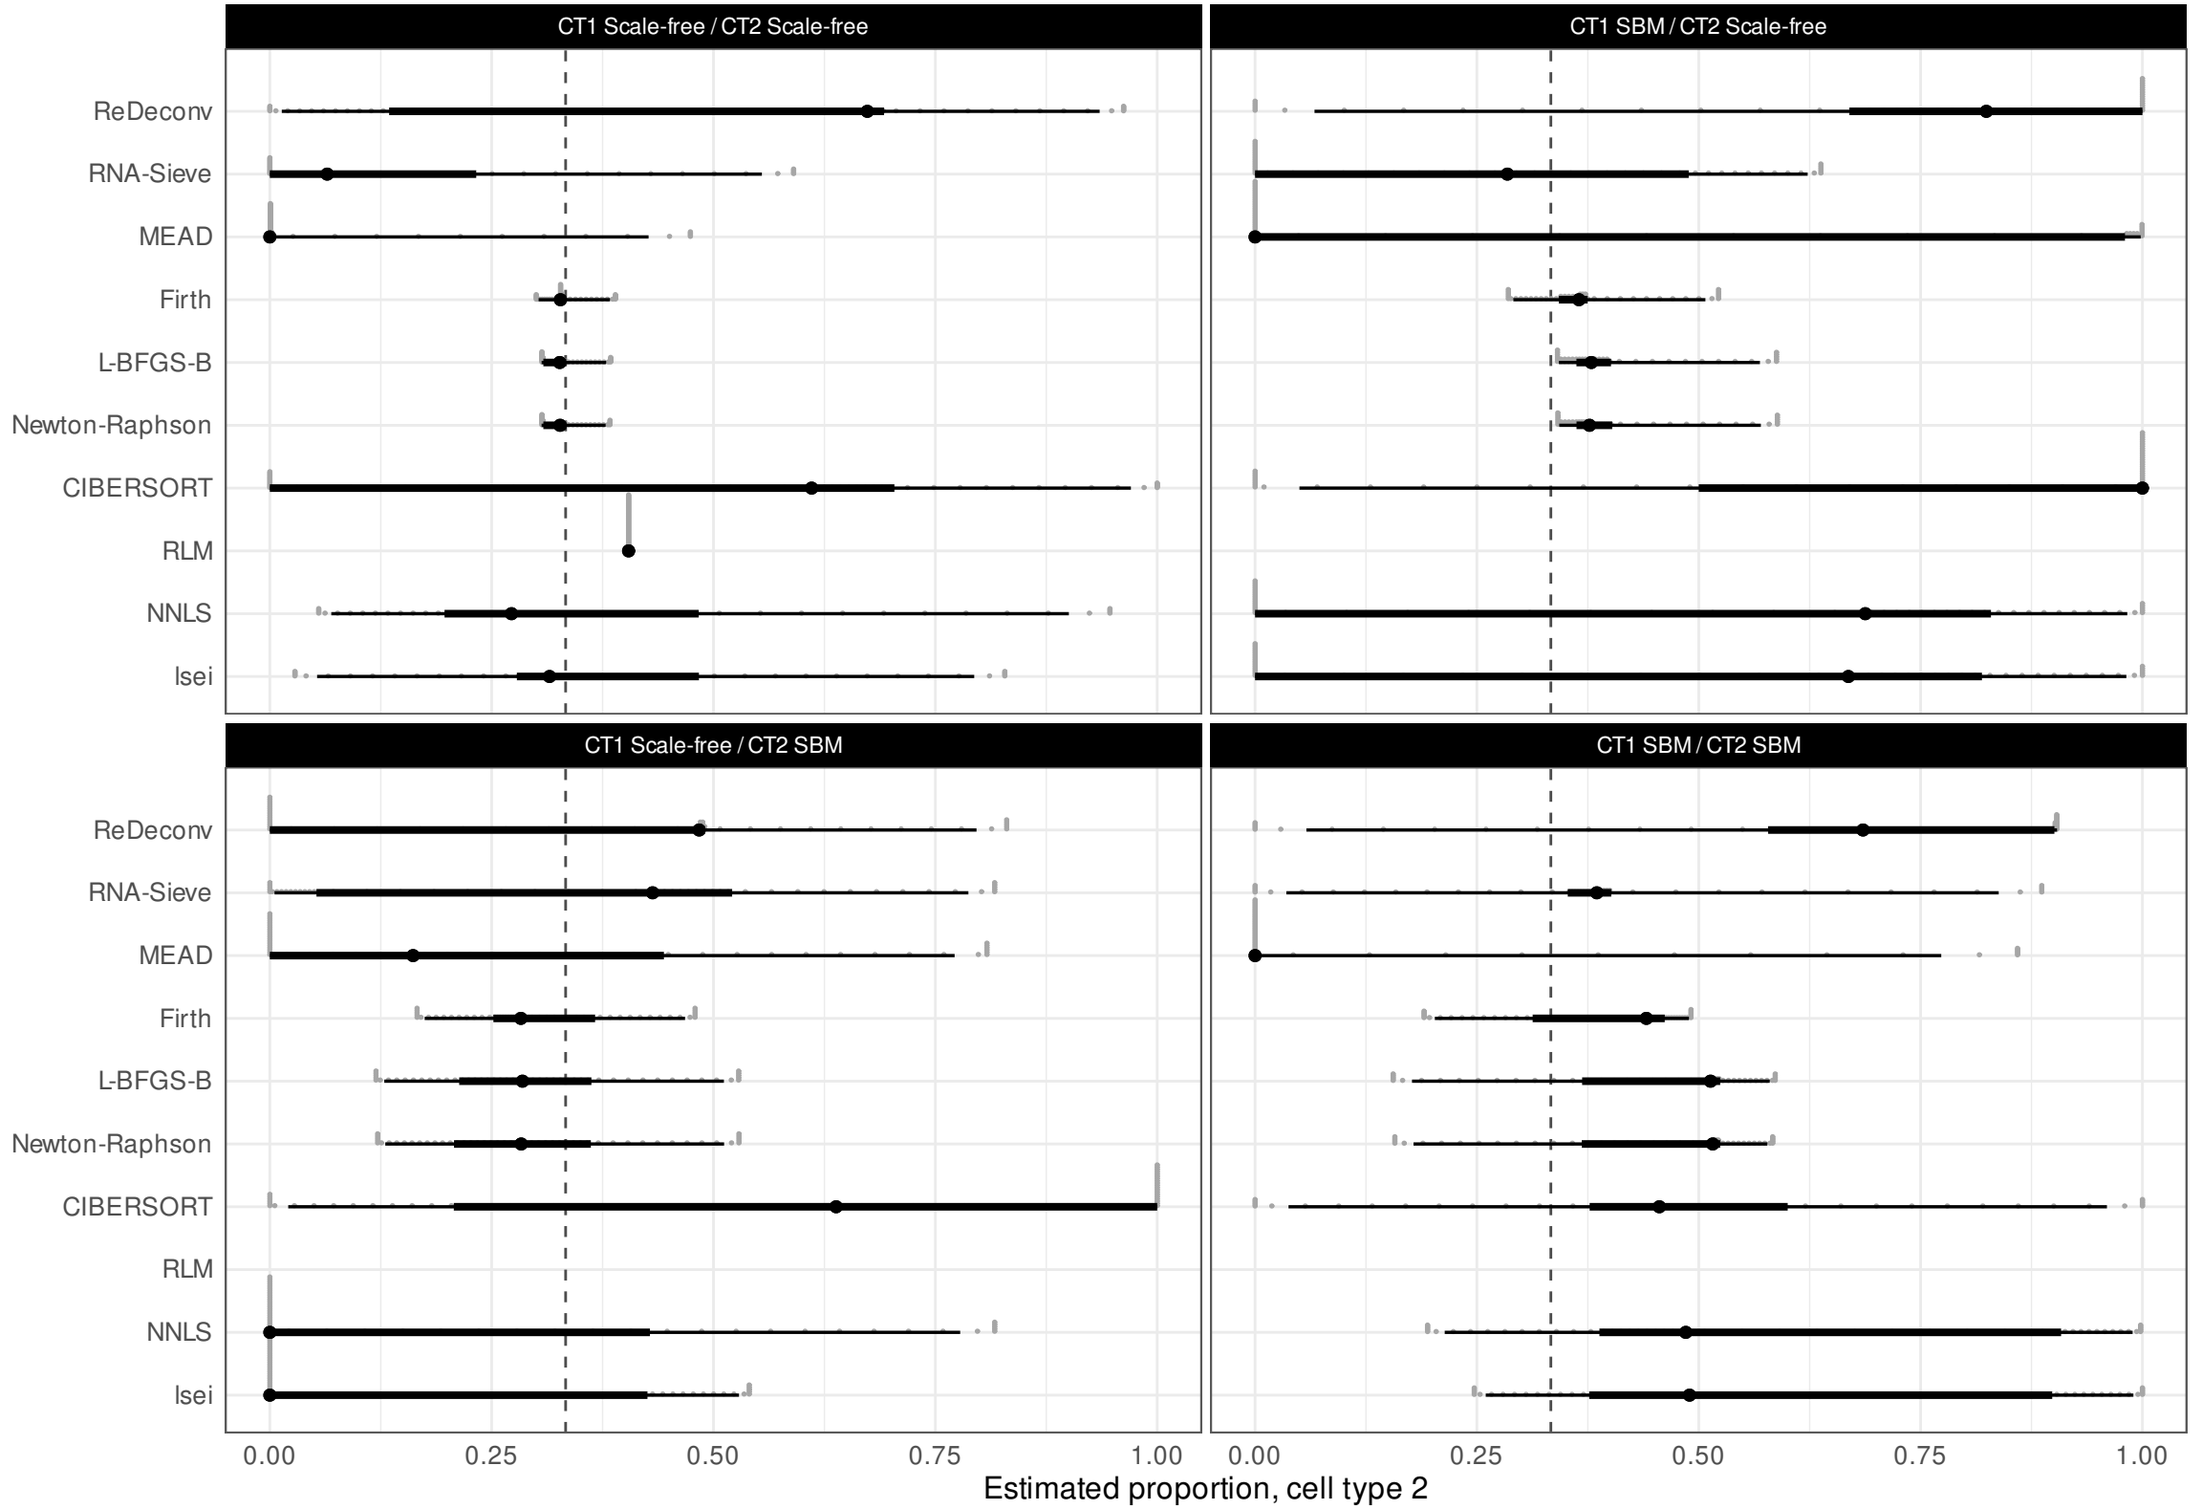

balanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

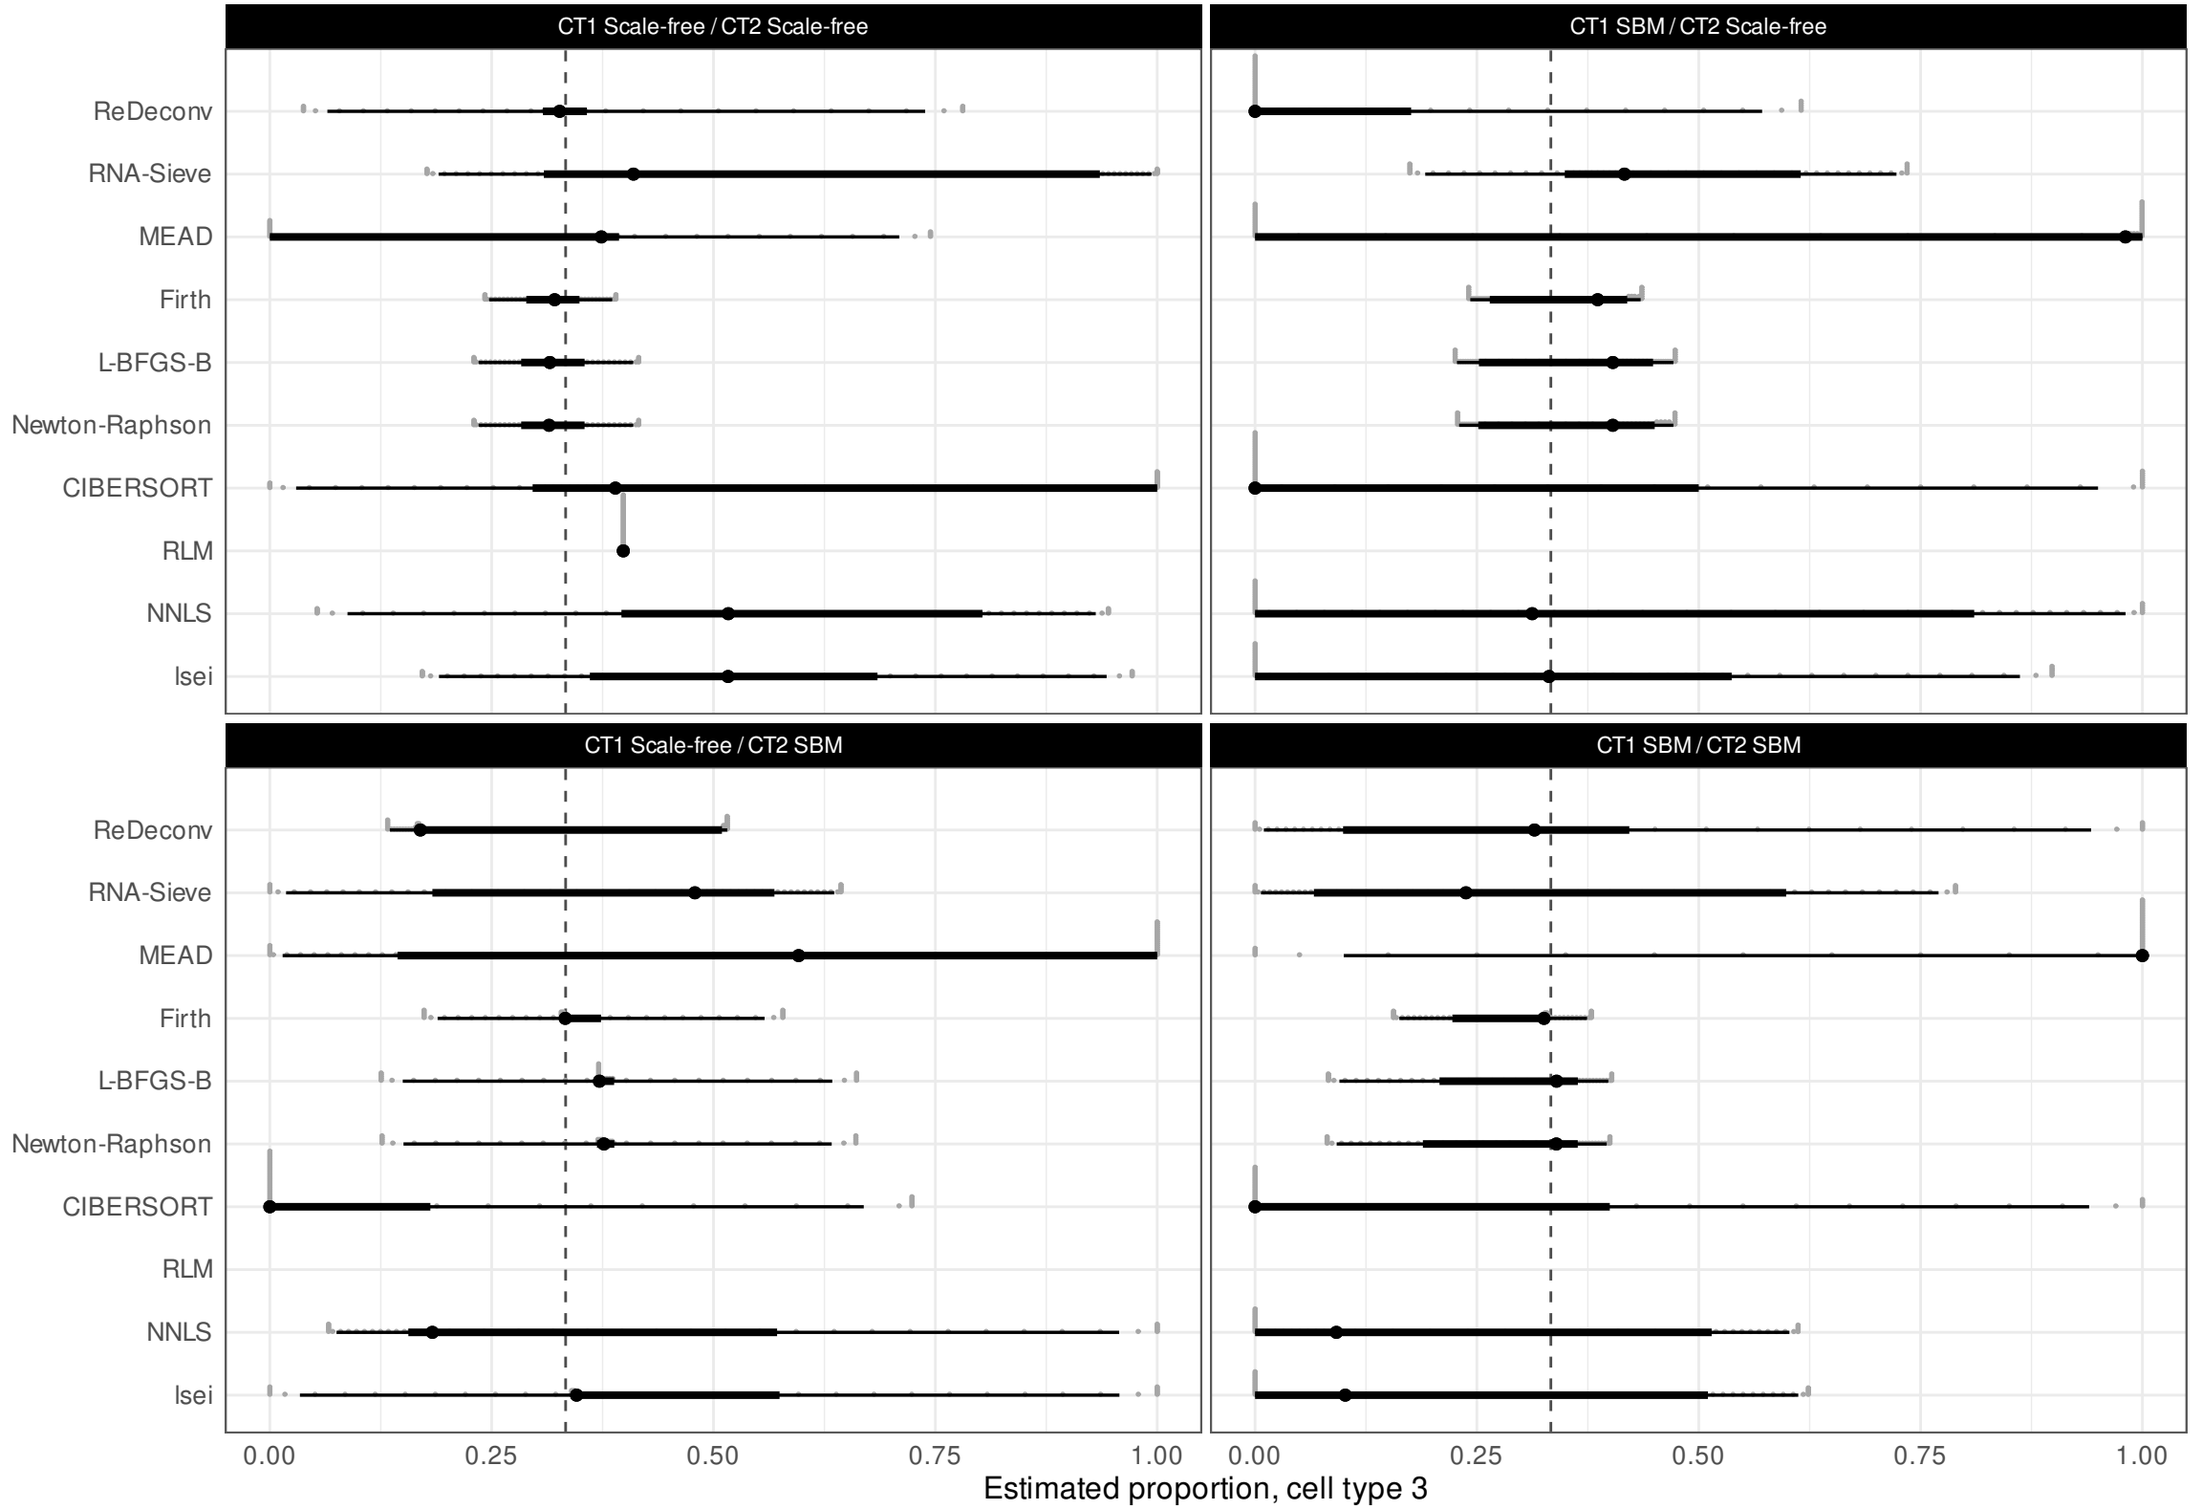

balanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

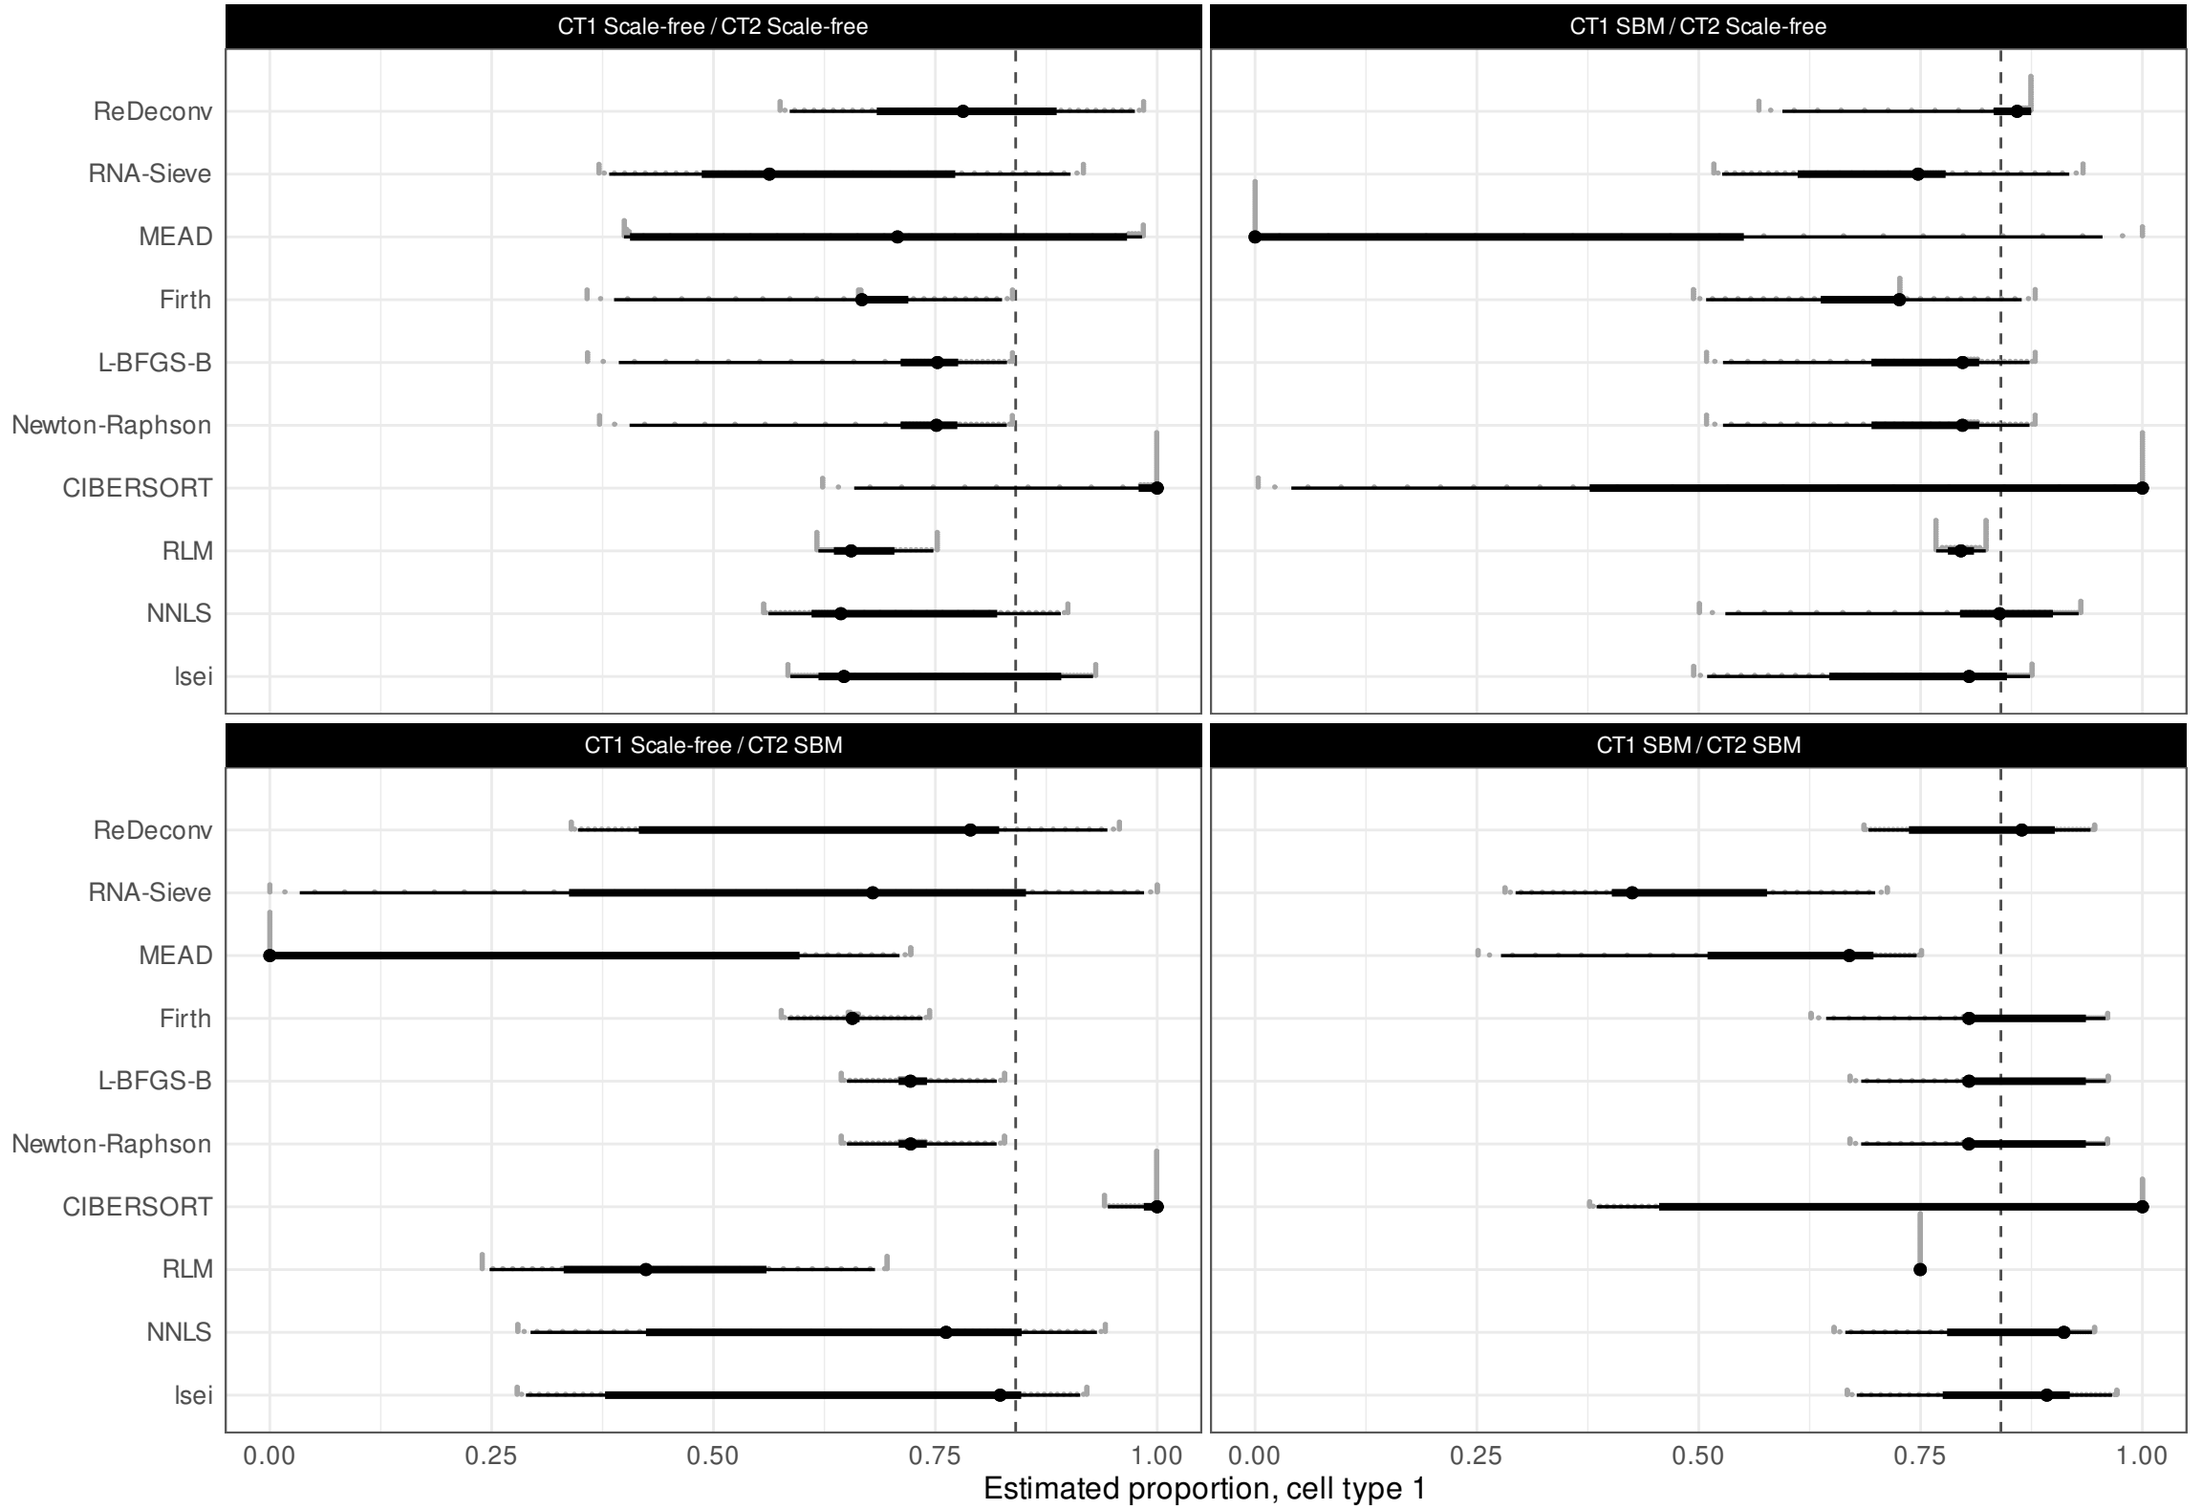

balanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

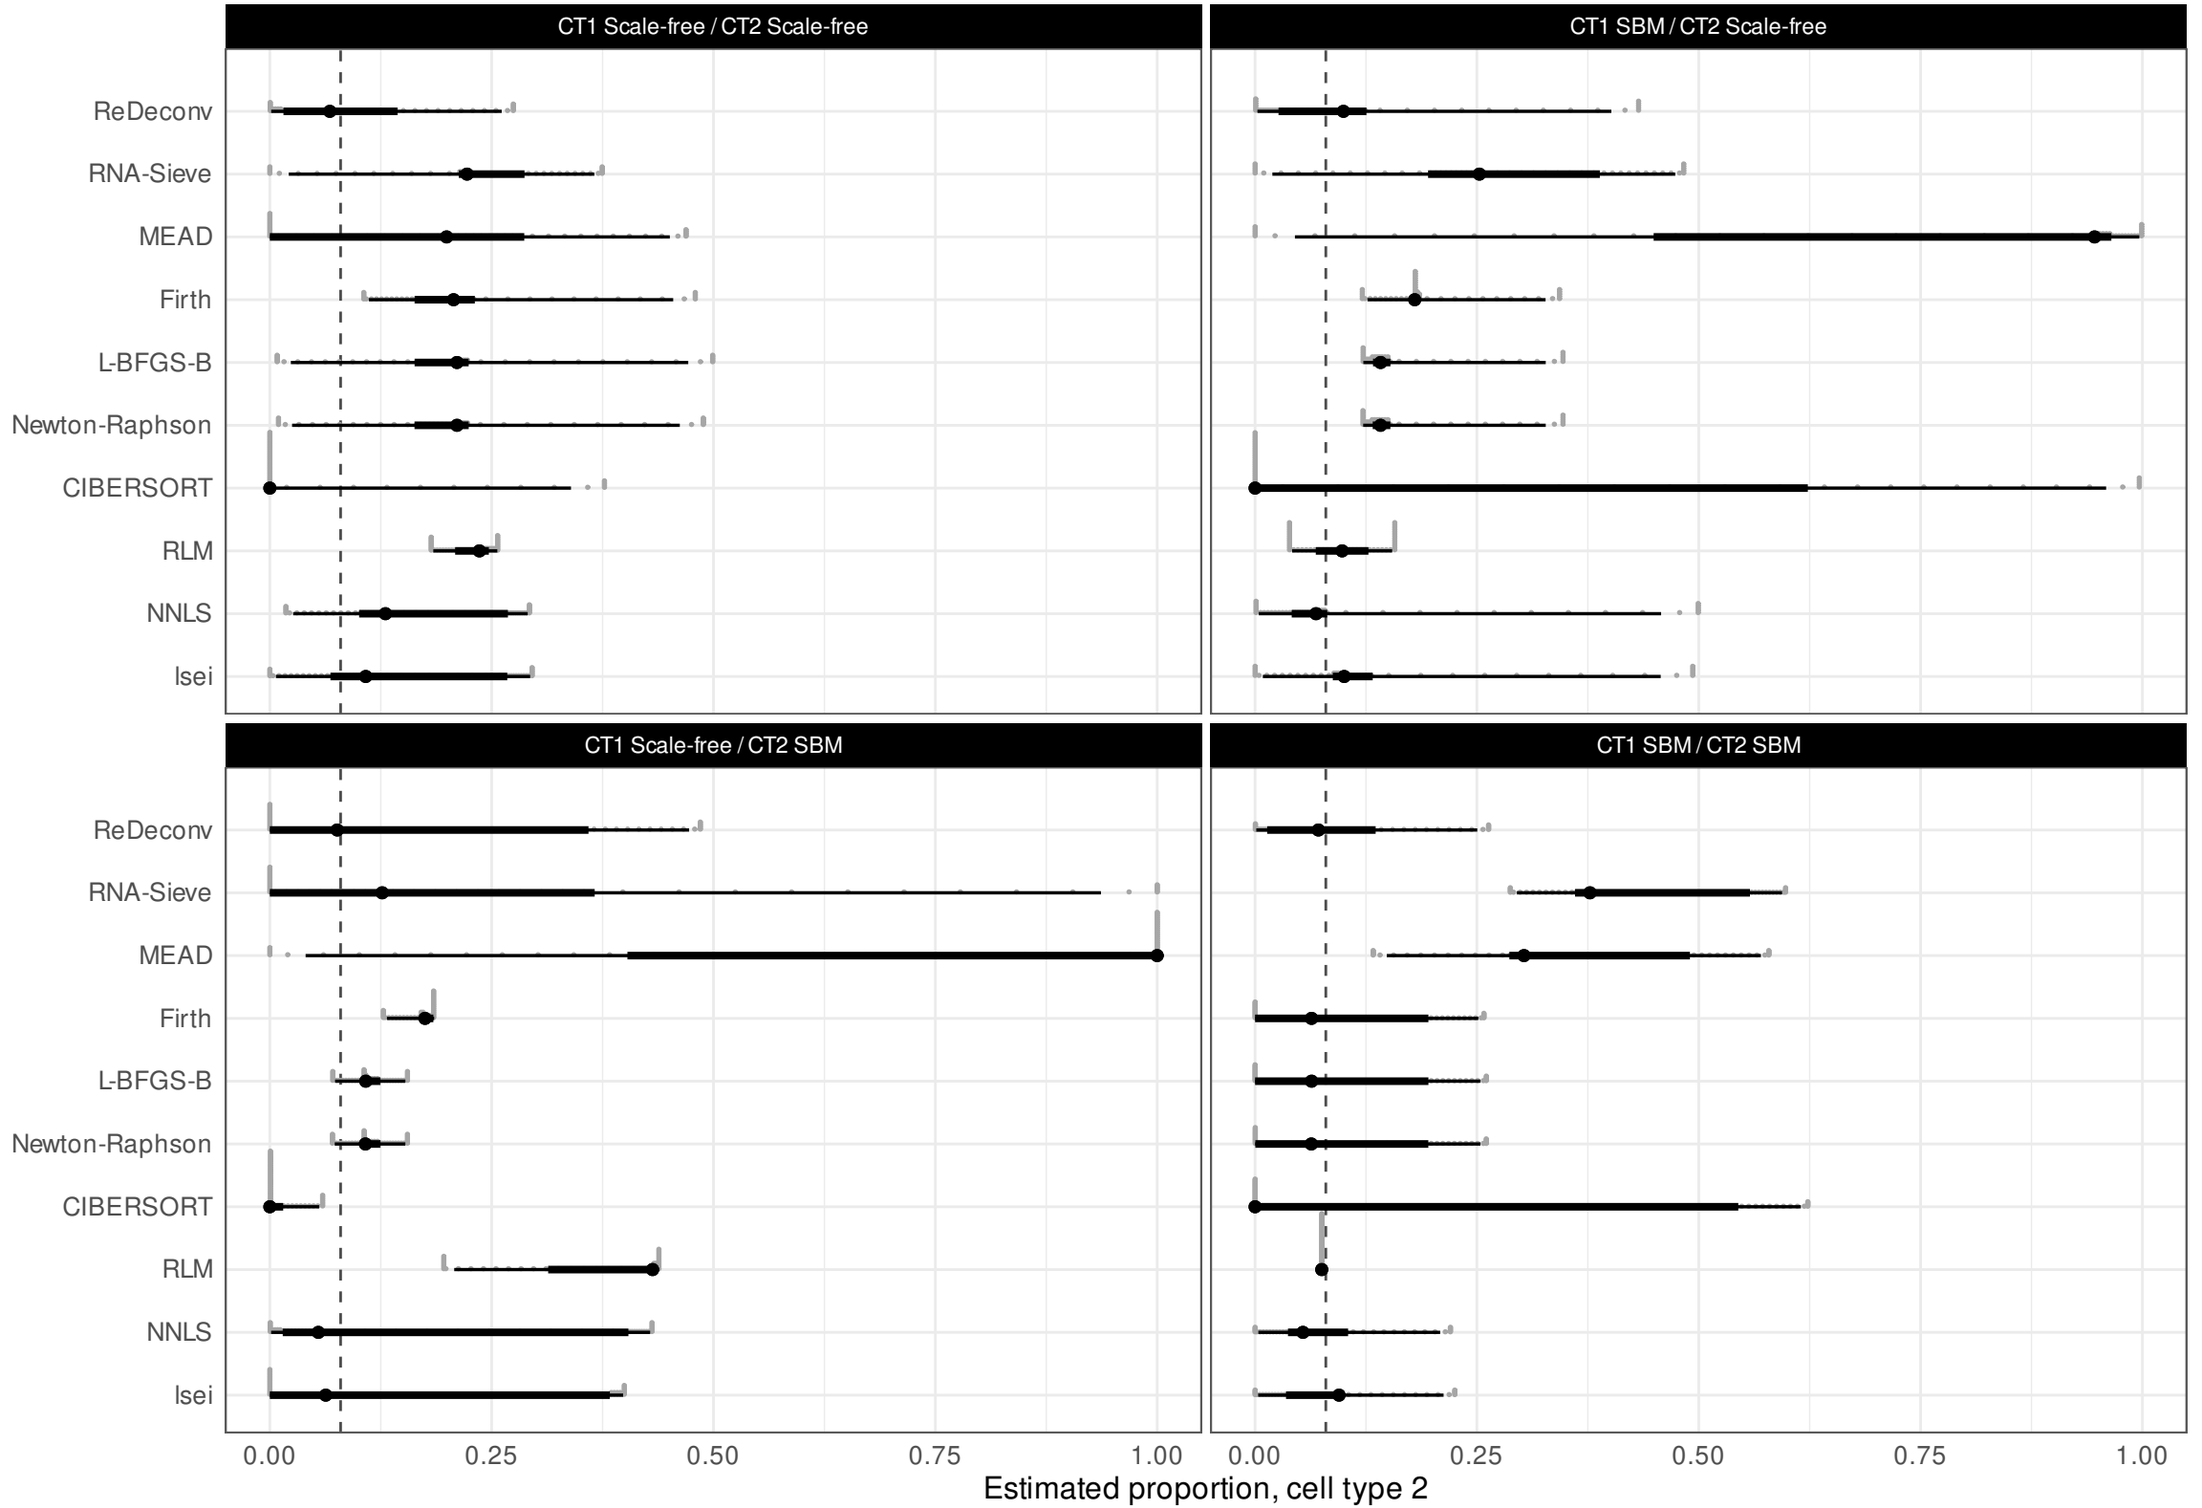

moderately unbalanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

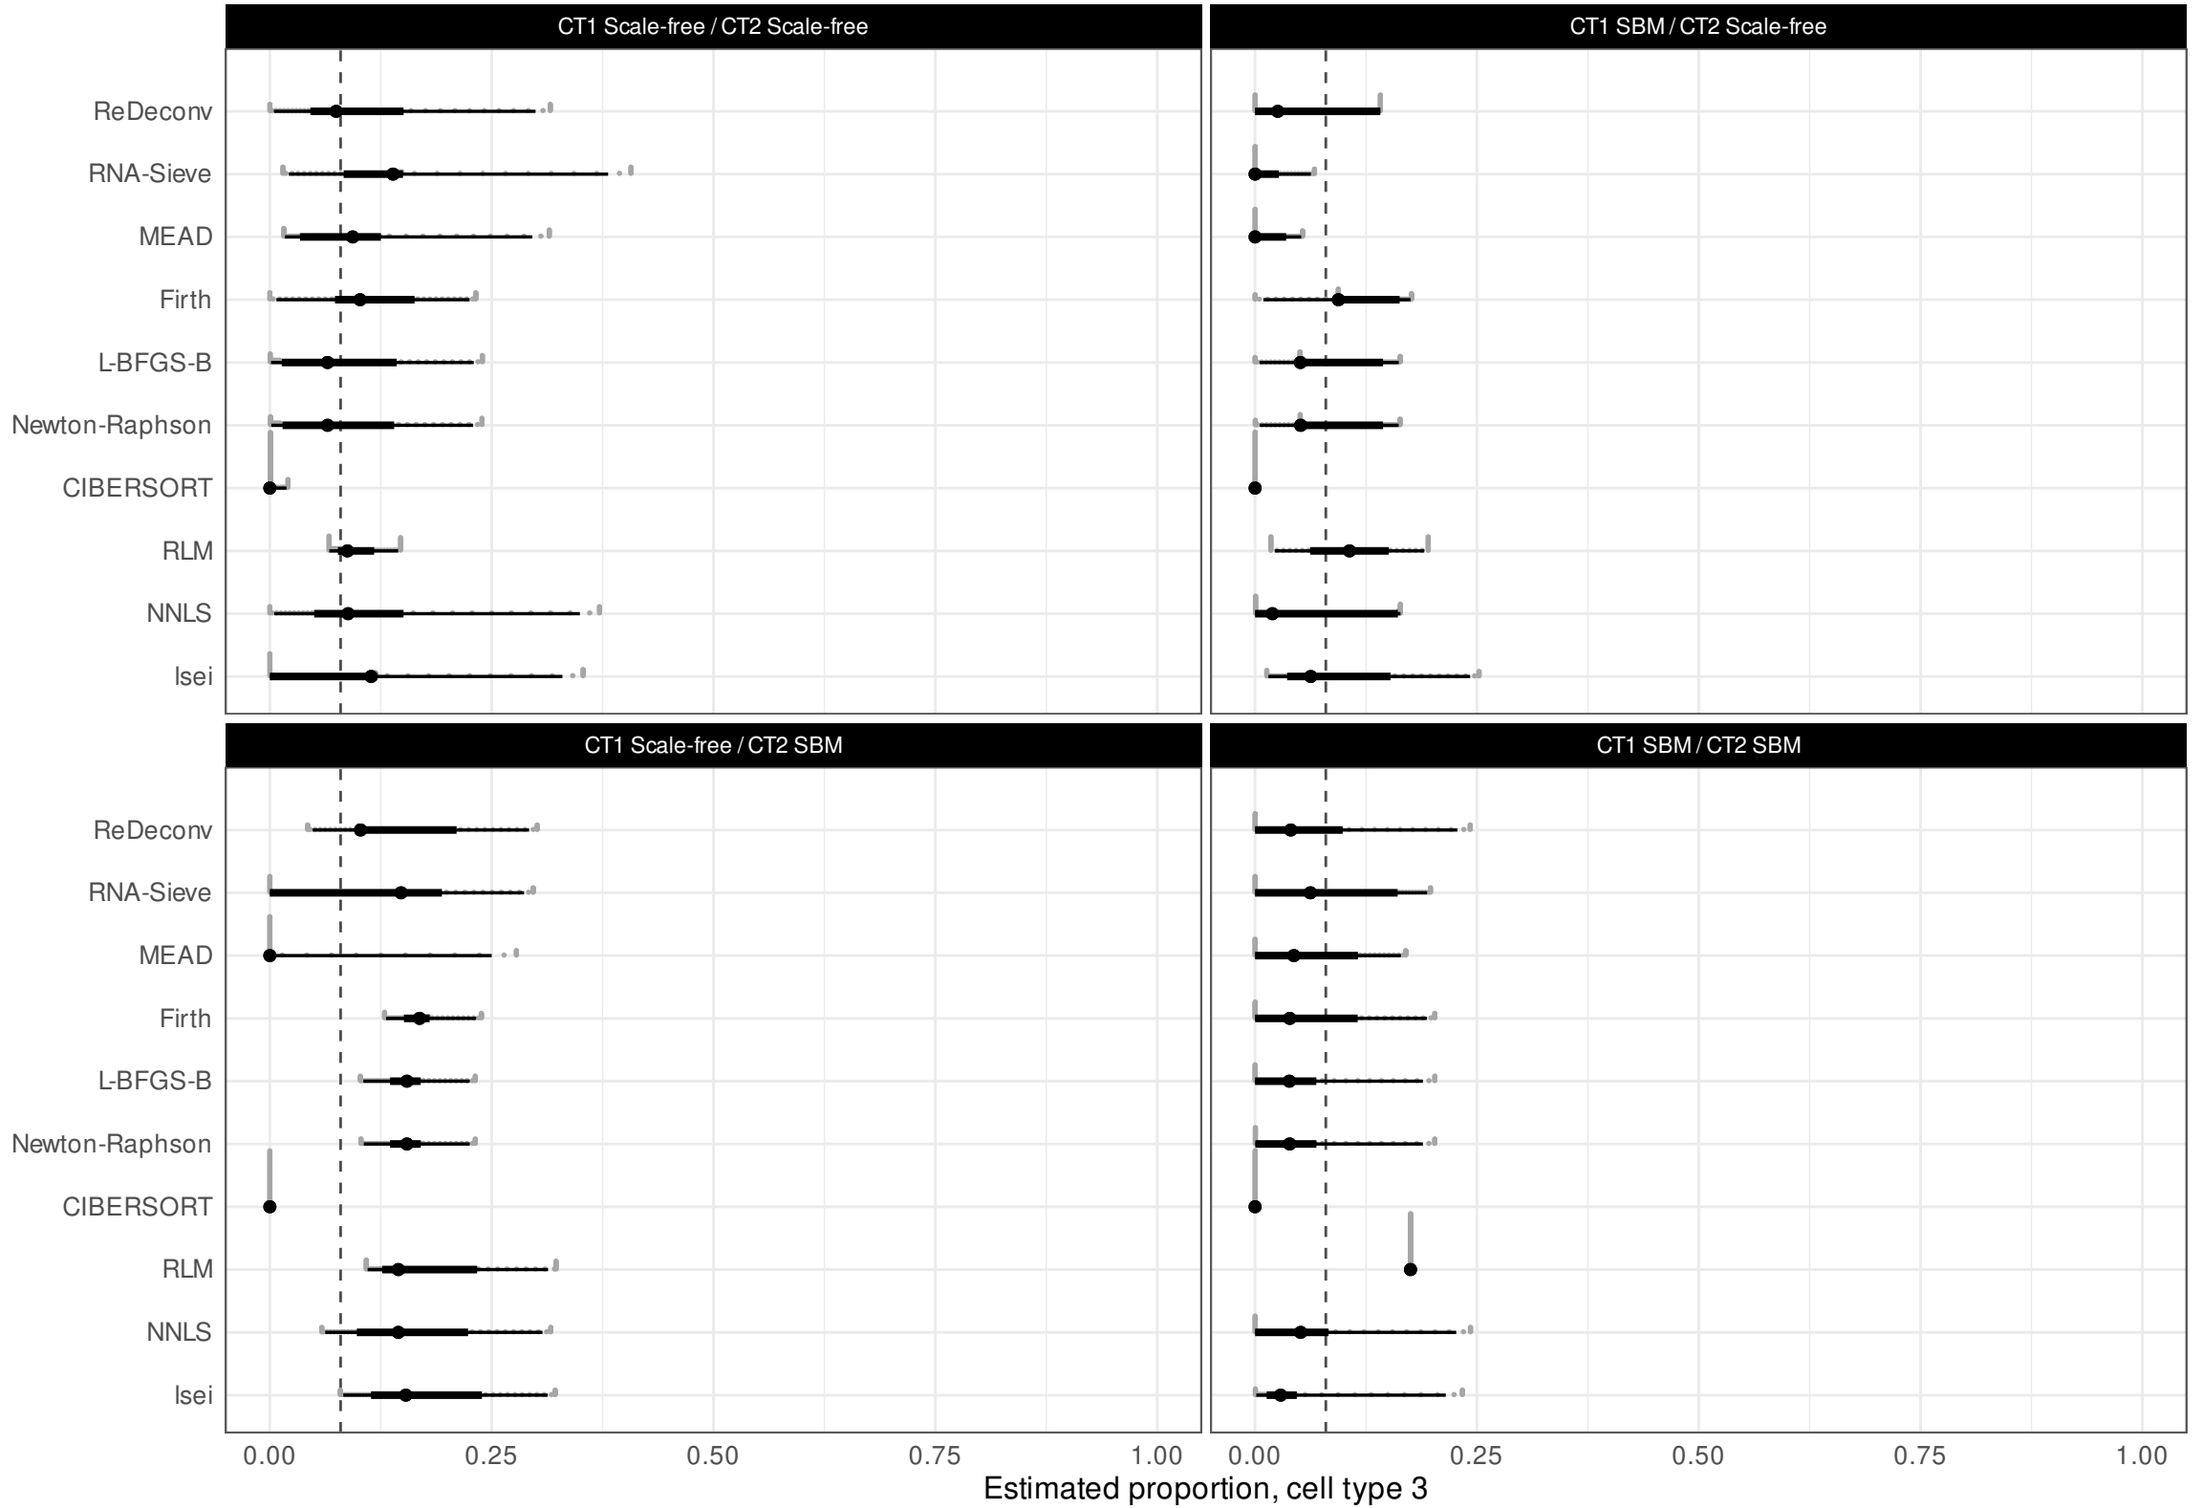

moderately unbalanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

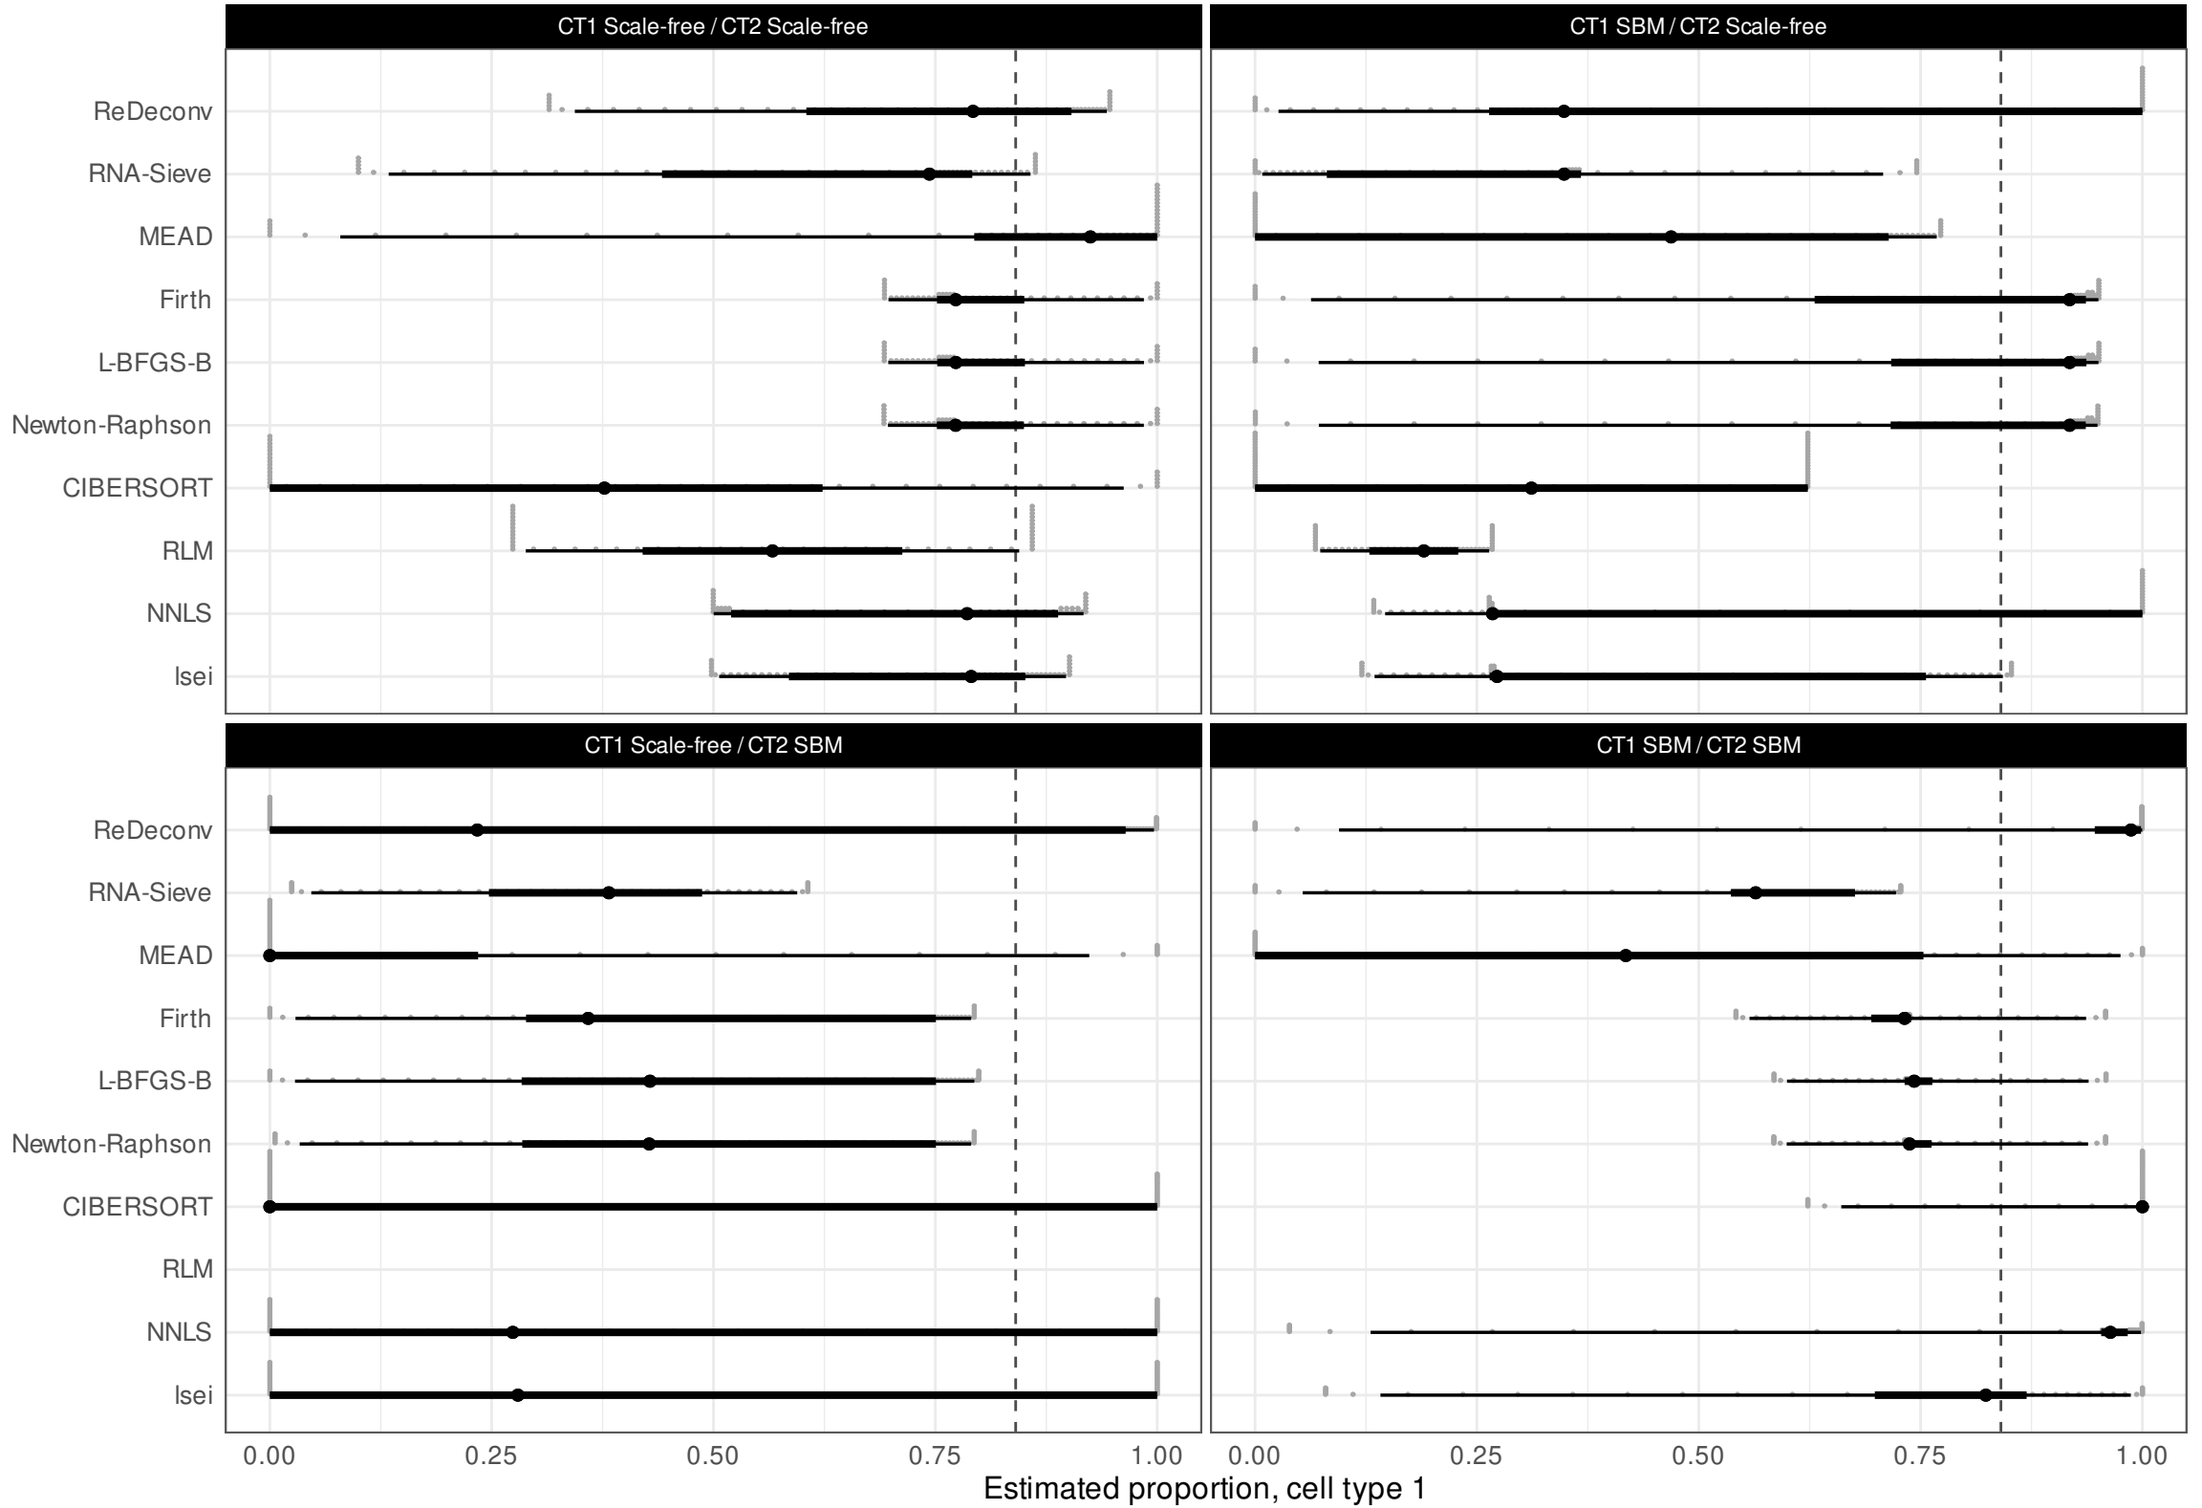

moderately unbalanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

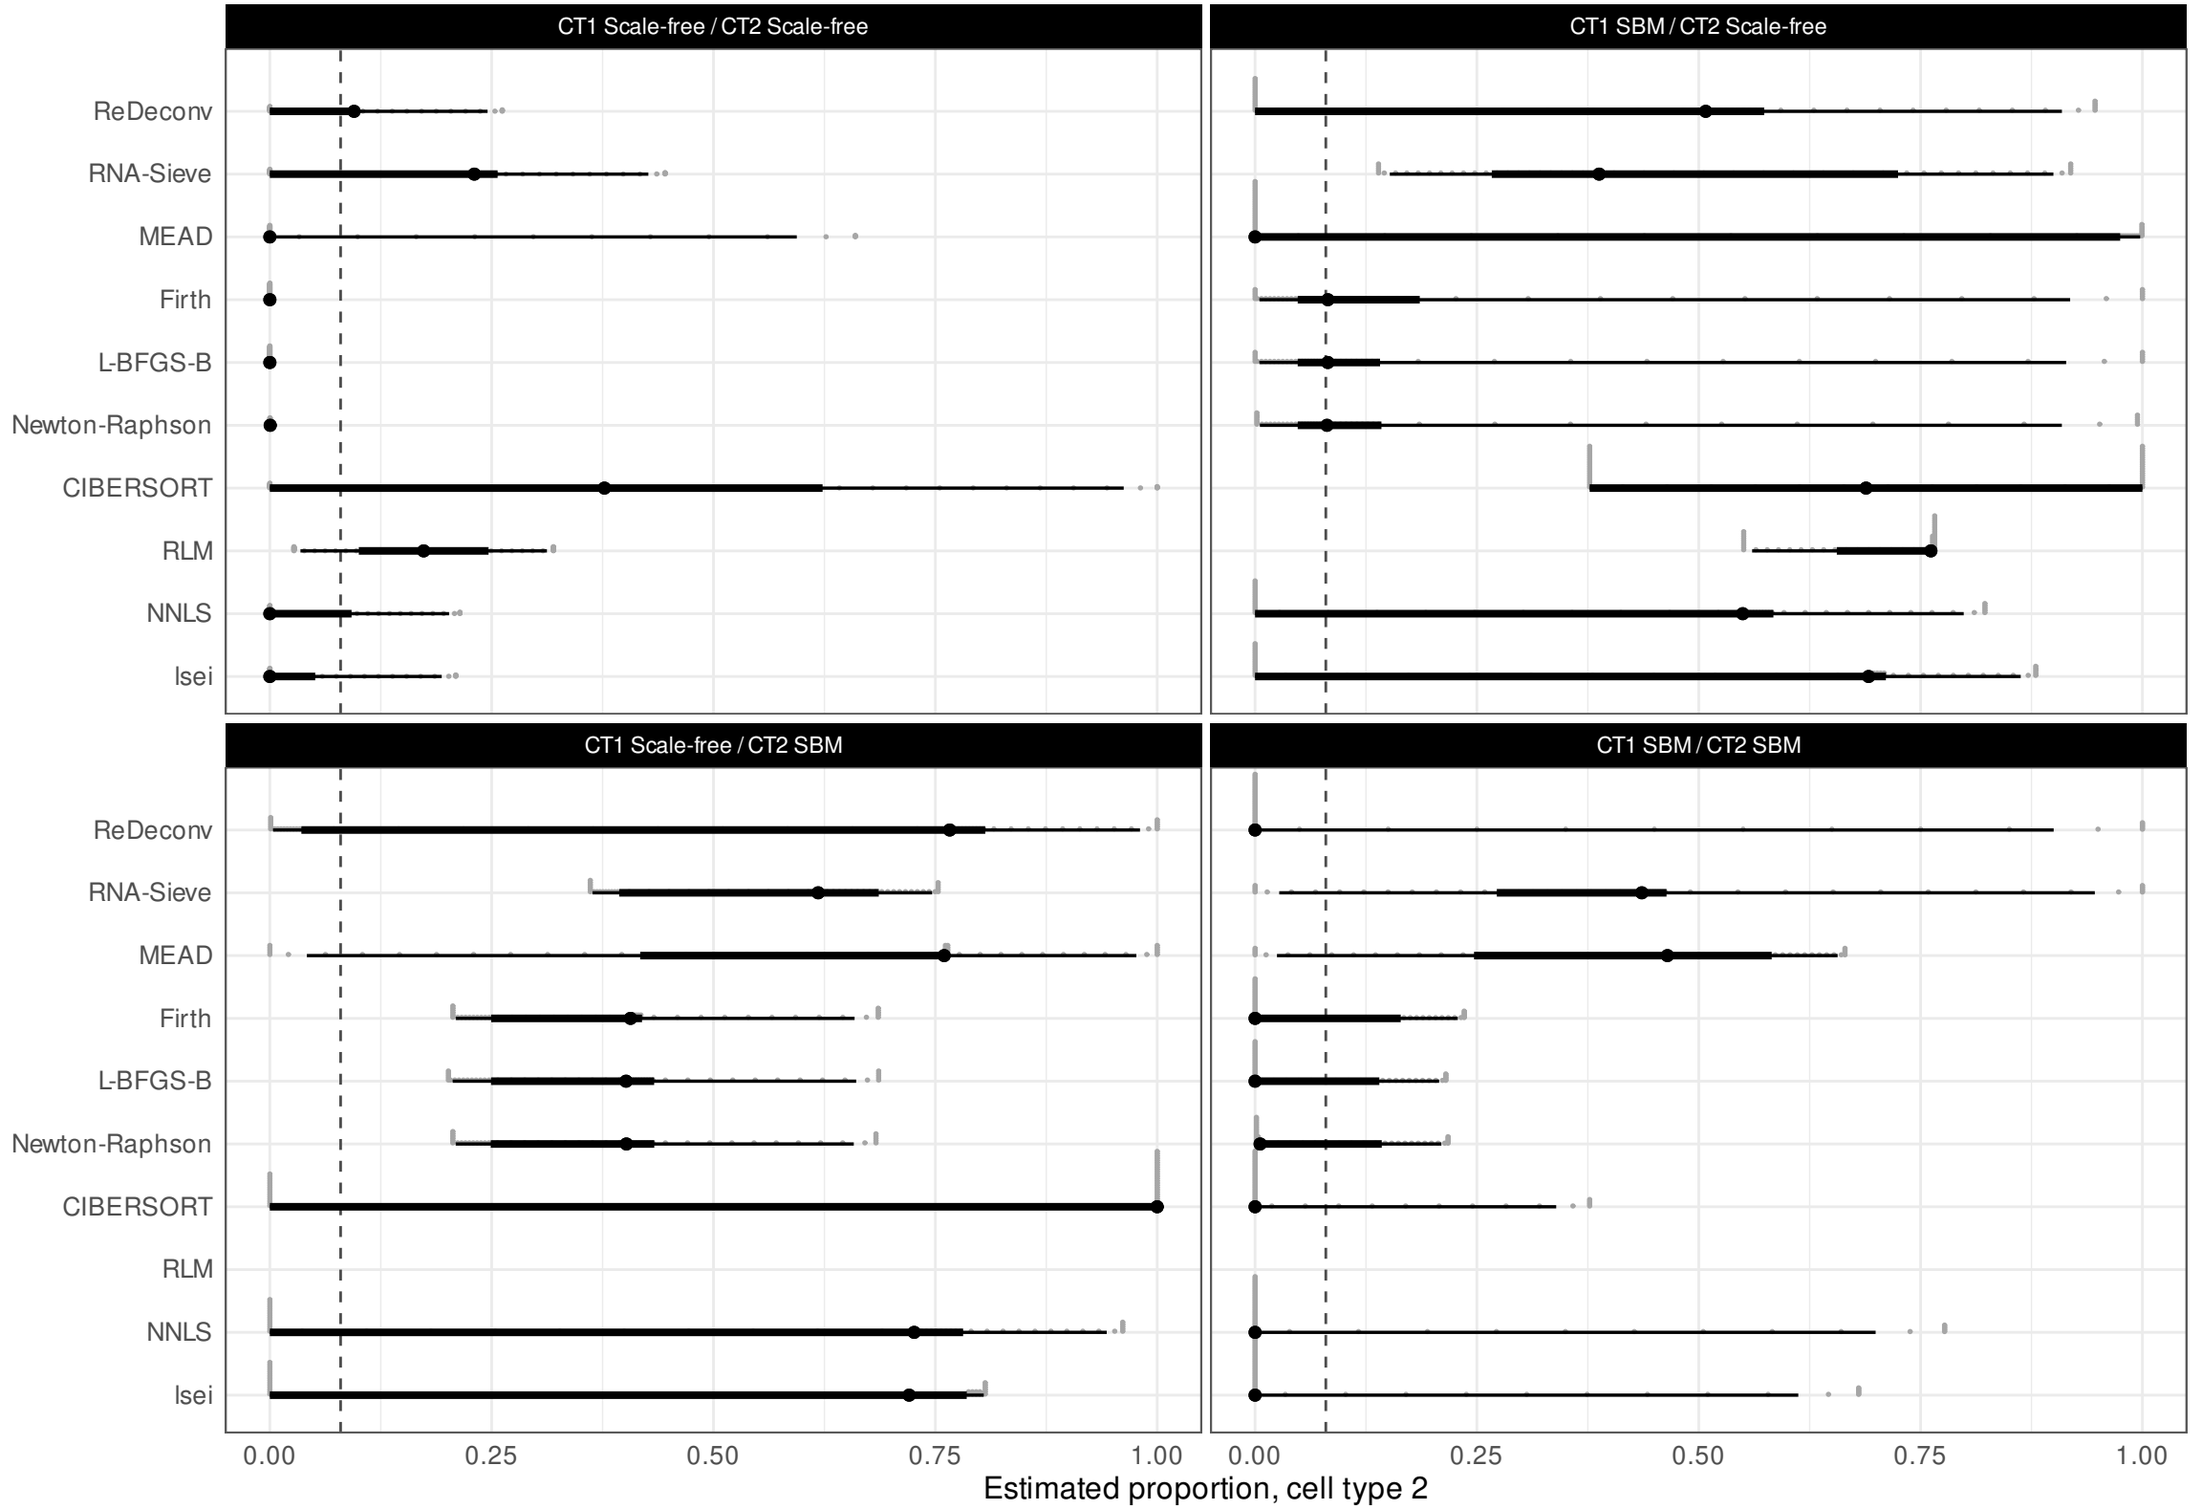

moderately unbalanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

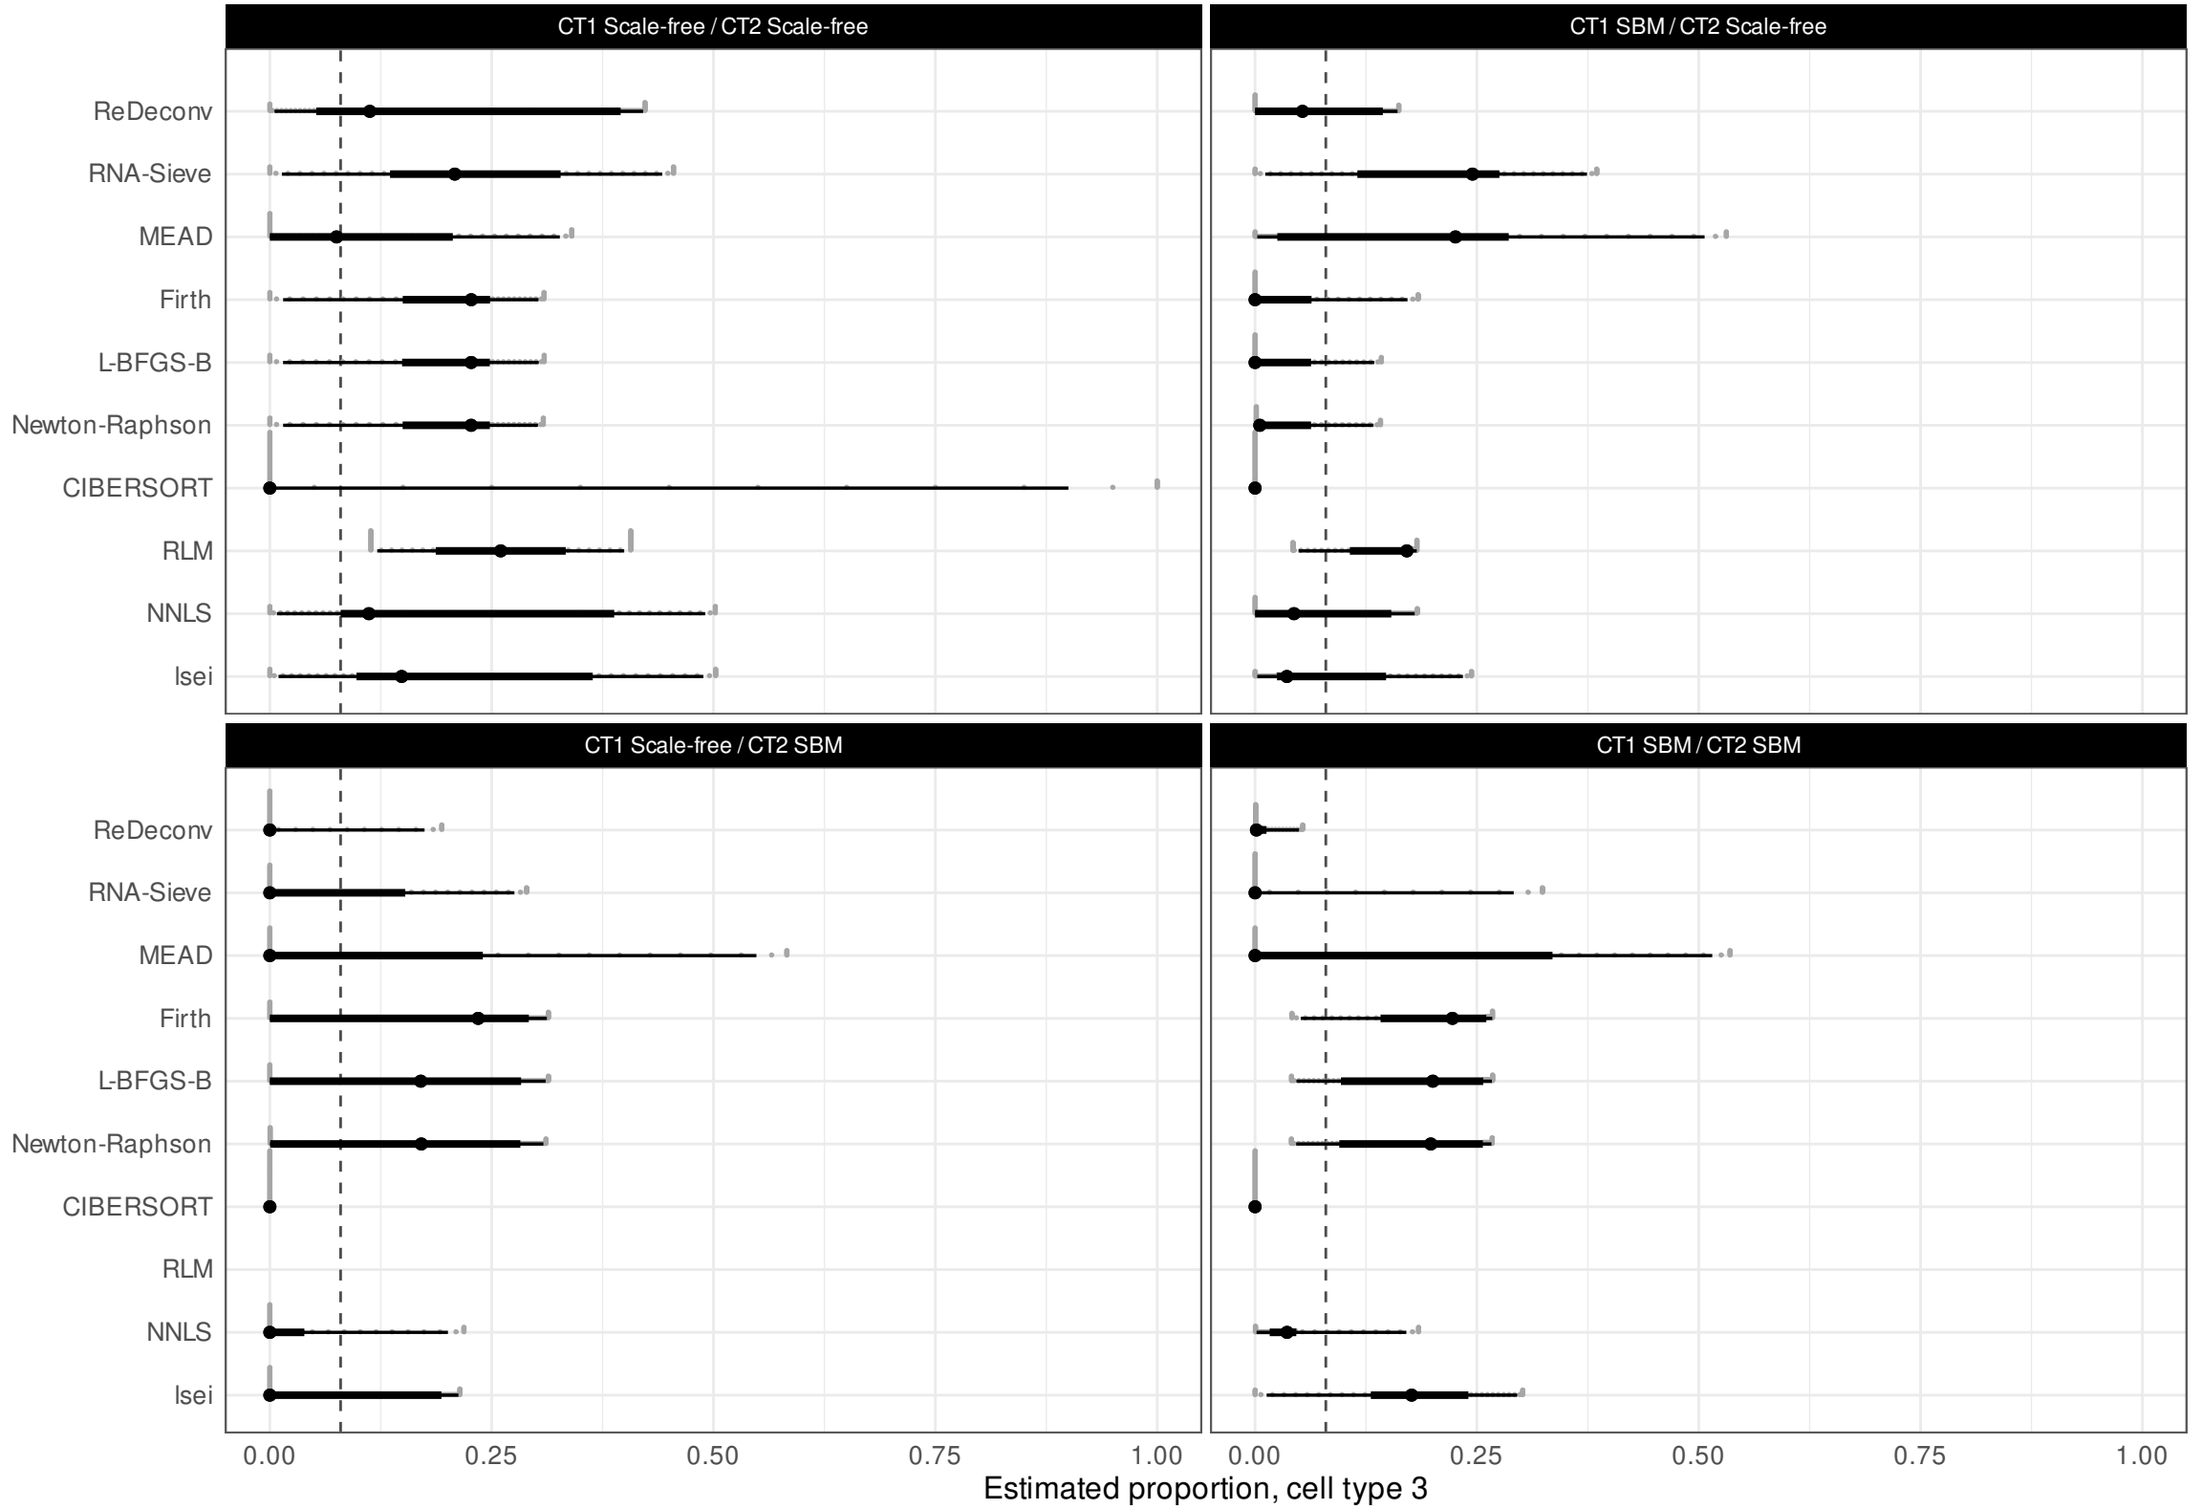

moderately unbalanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

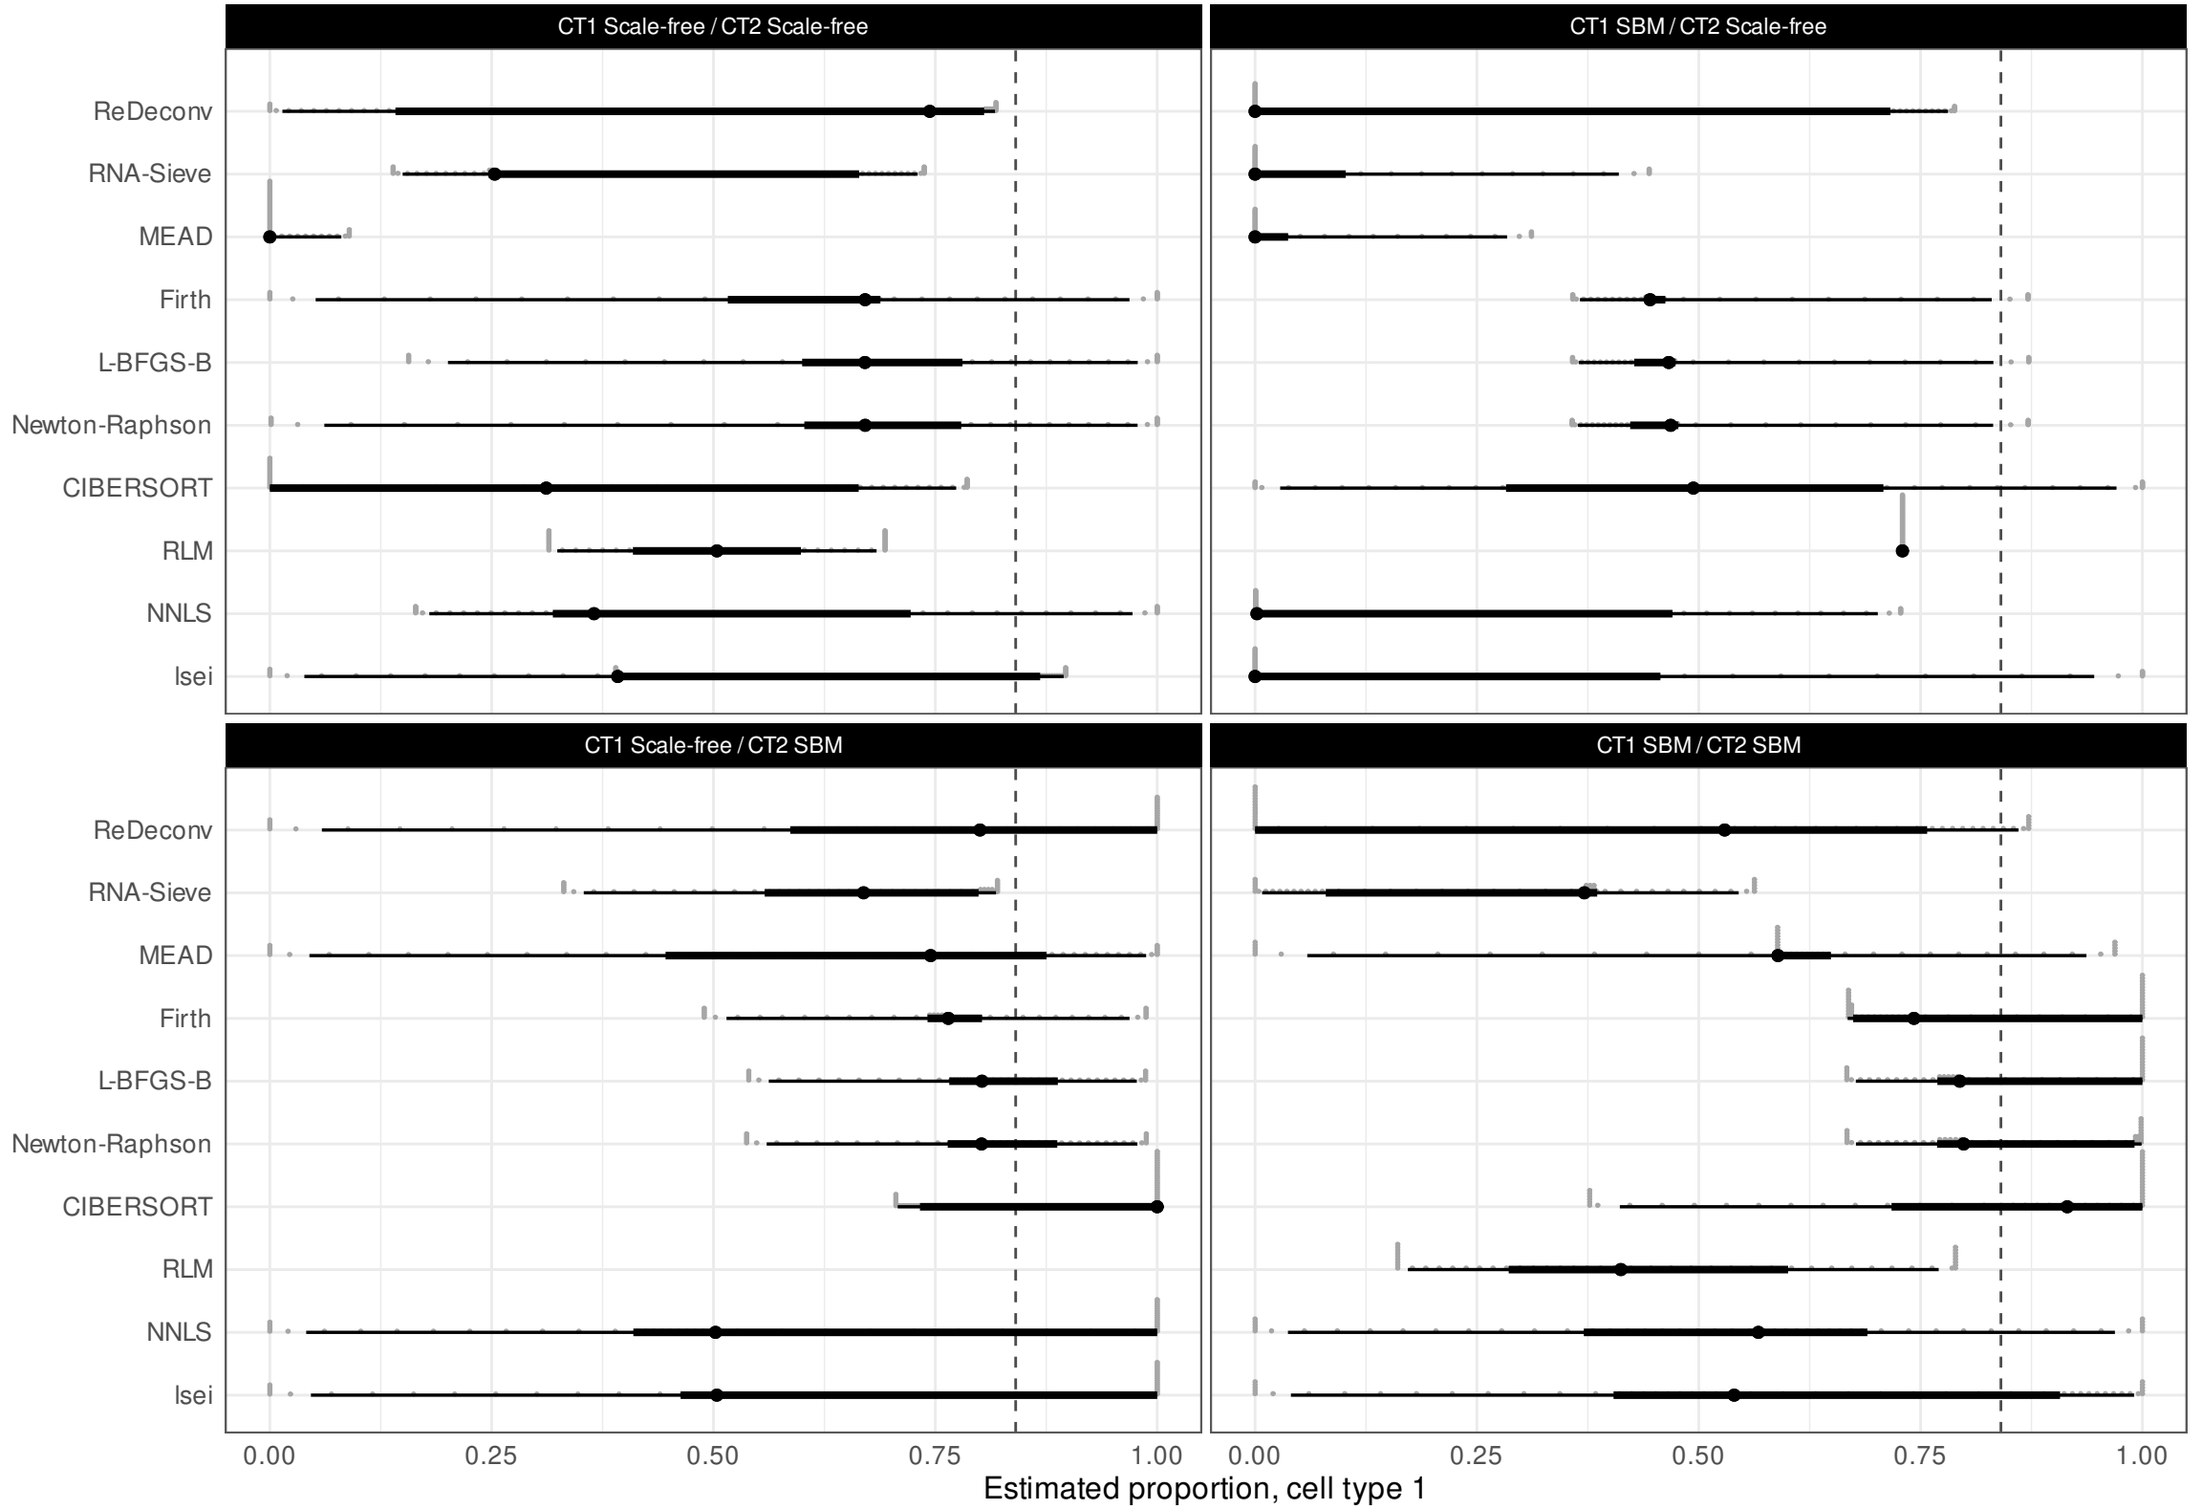

moderately unbalanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

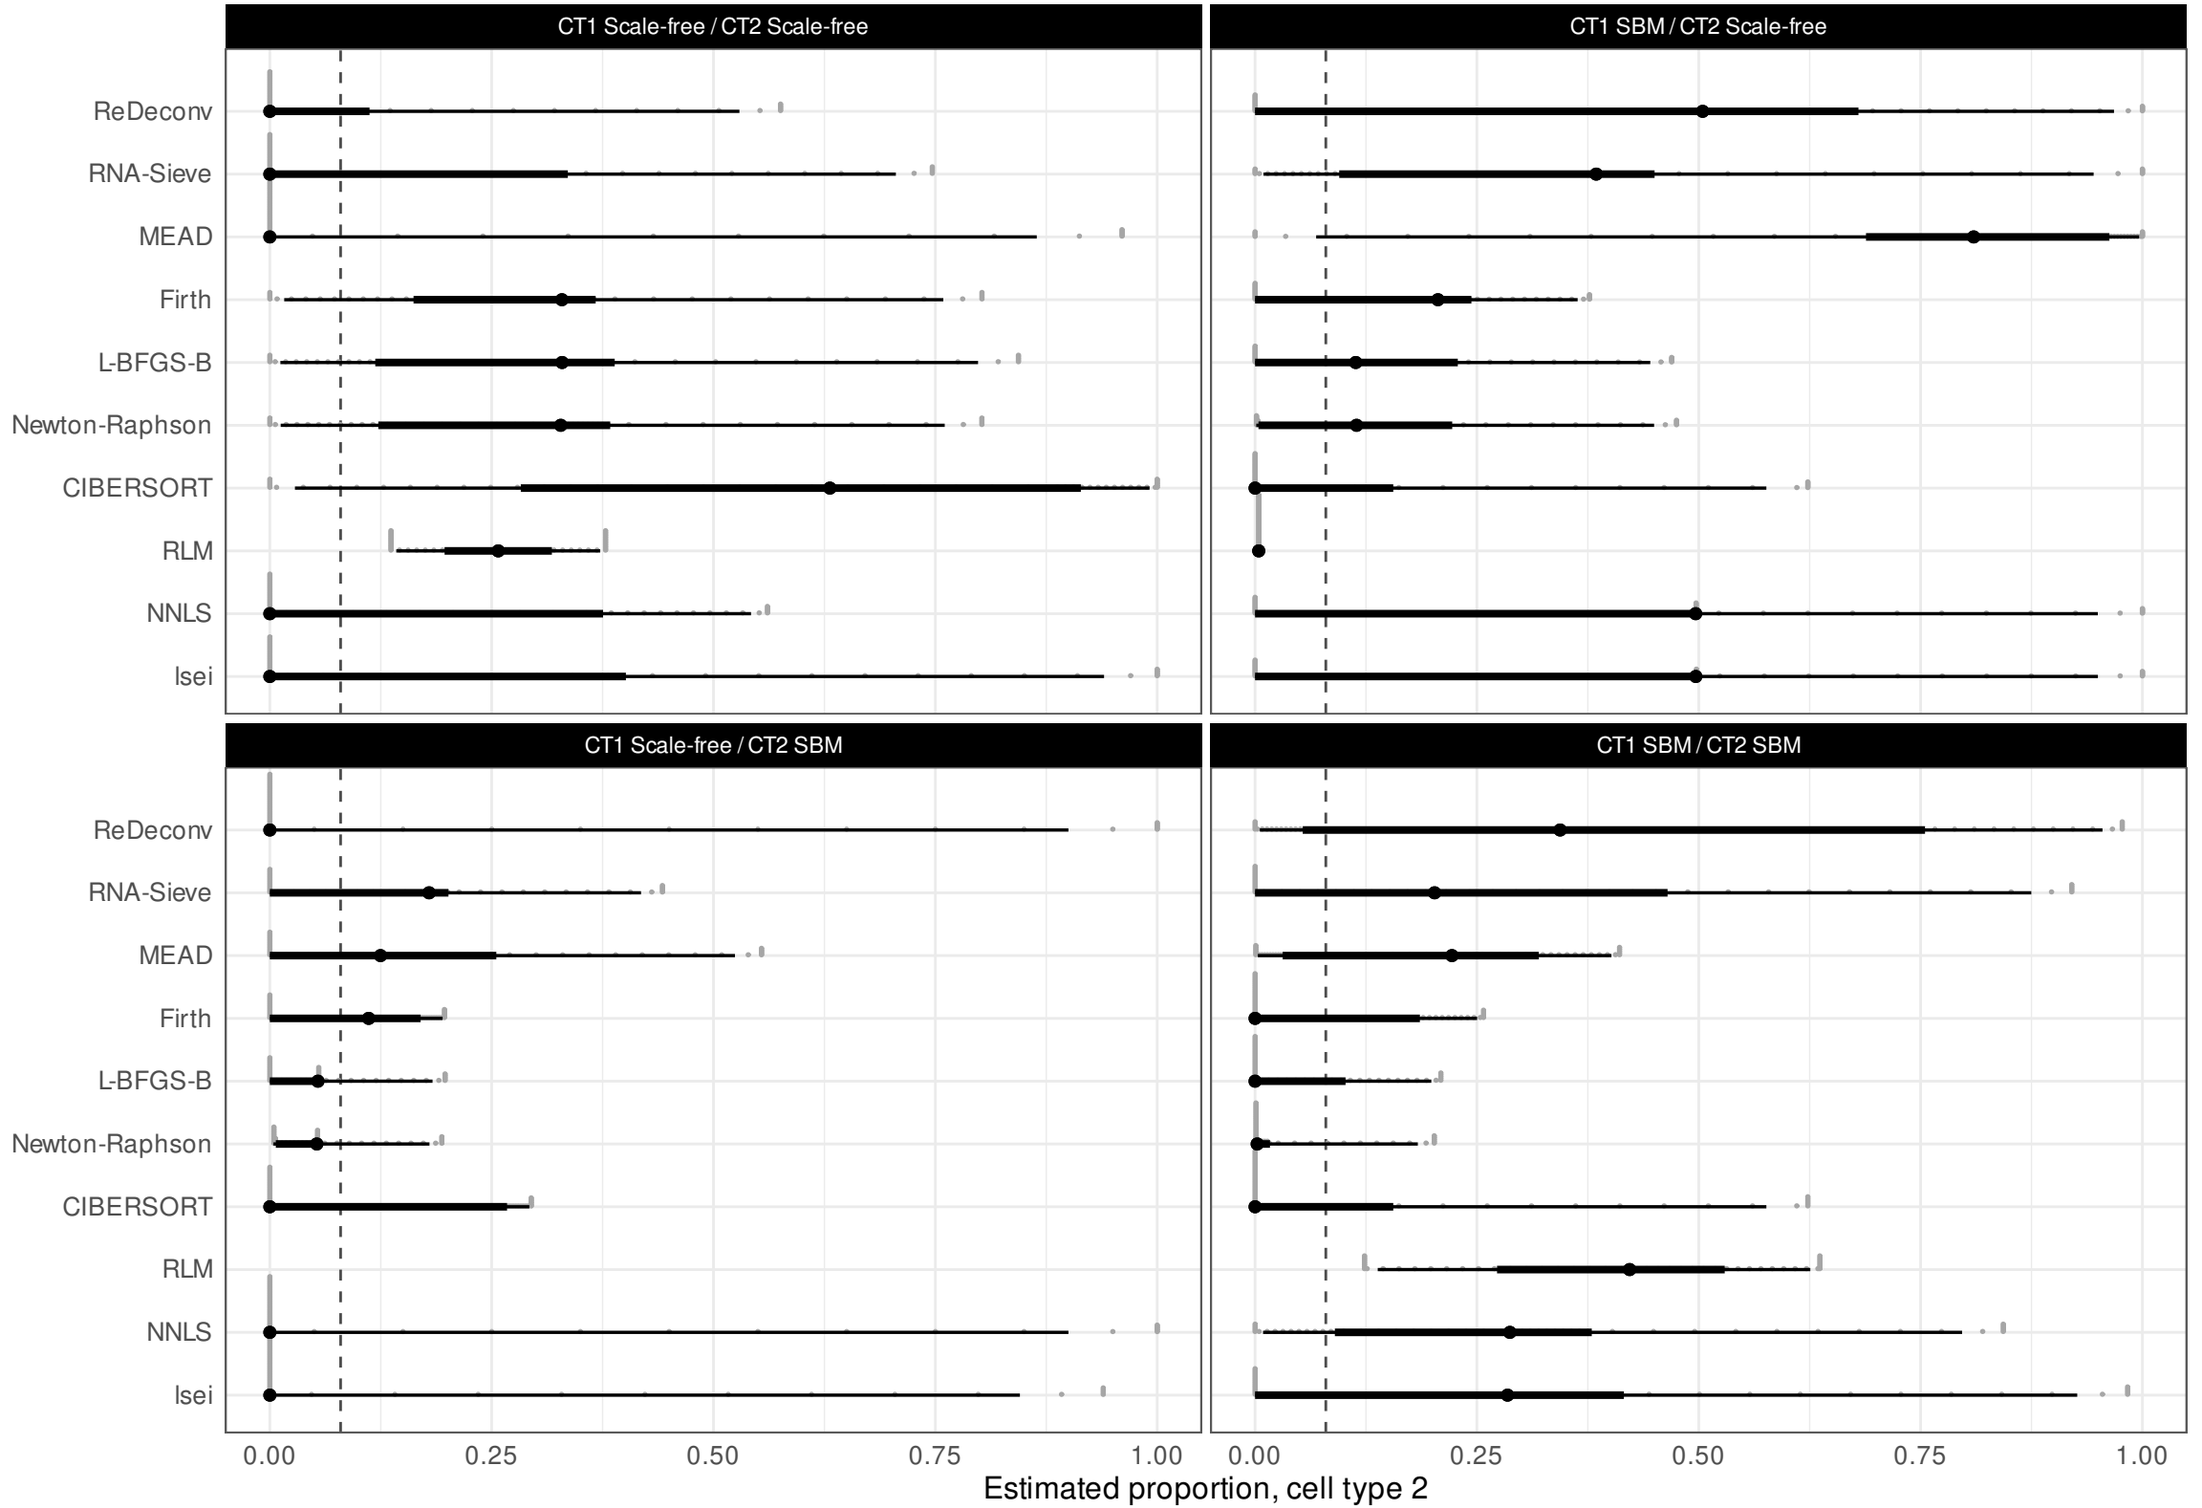

moderately unbalanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

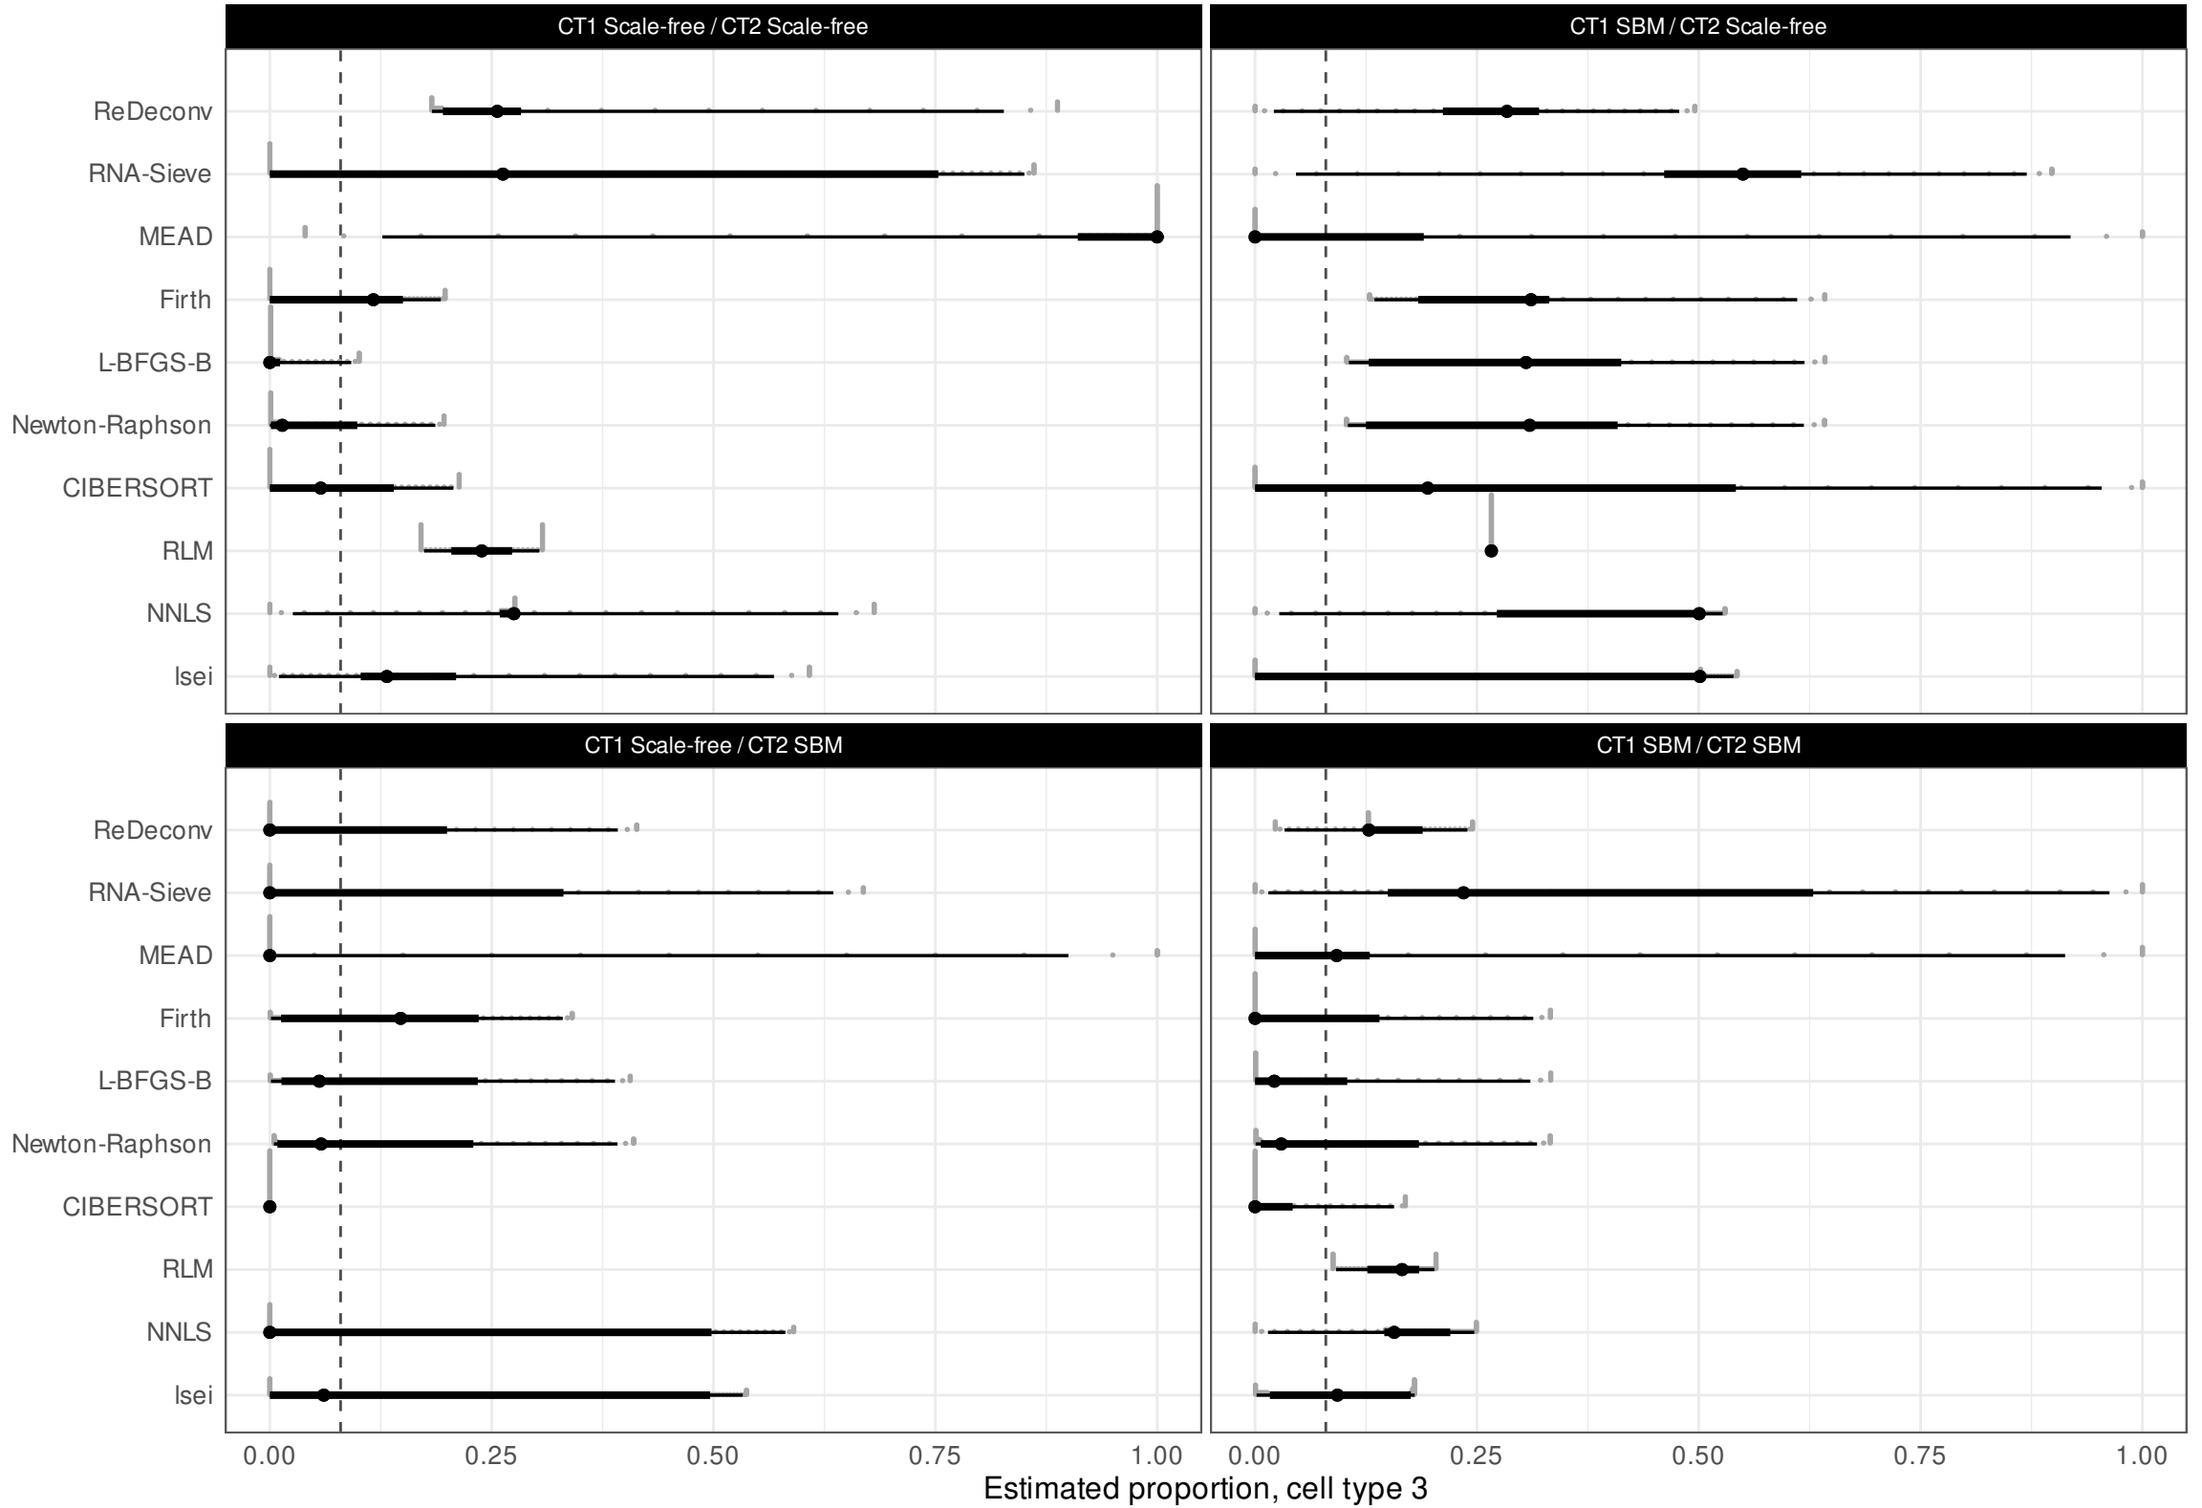

moderately unbalanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

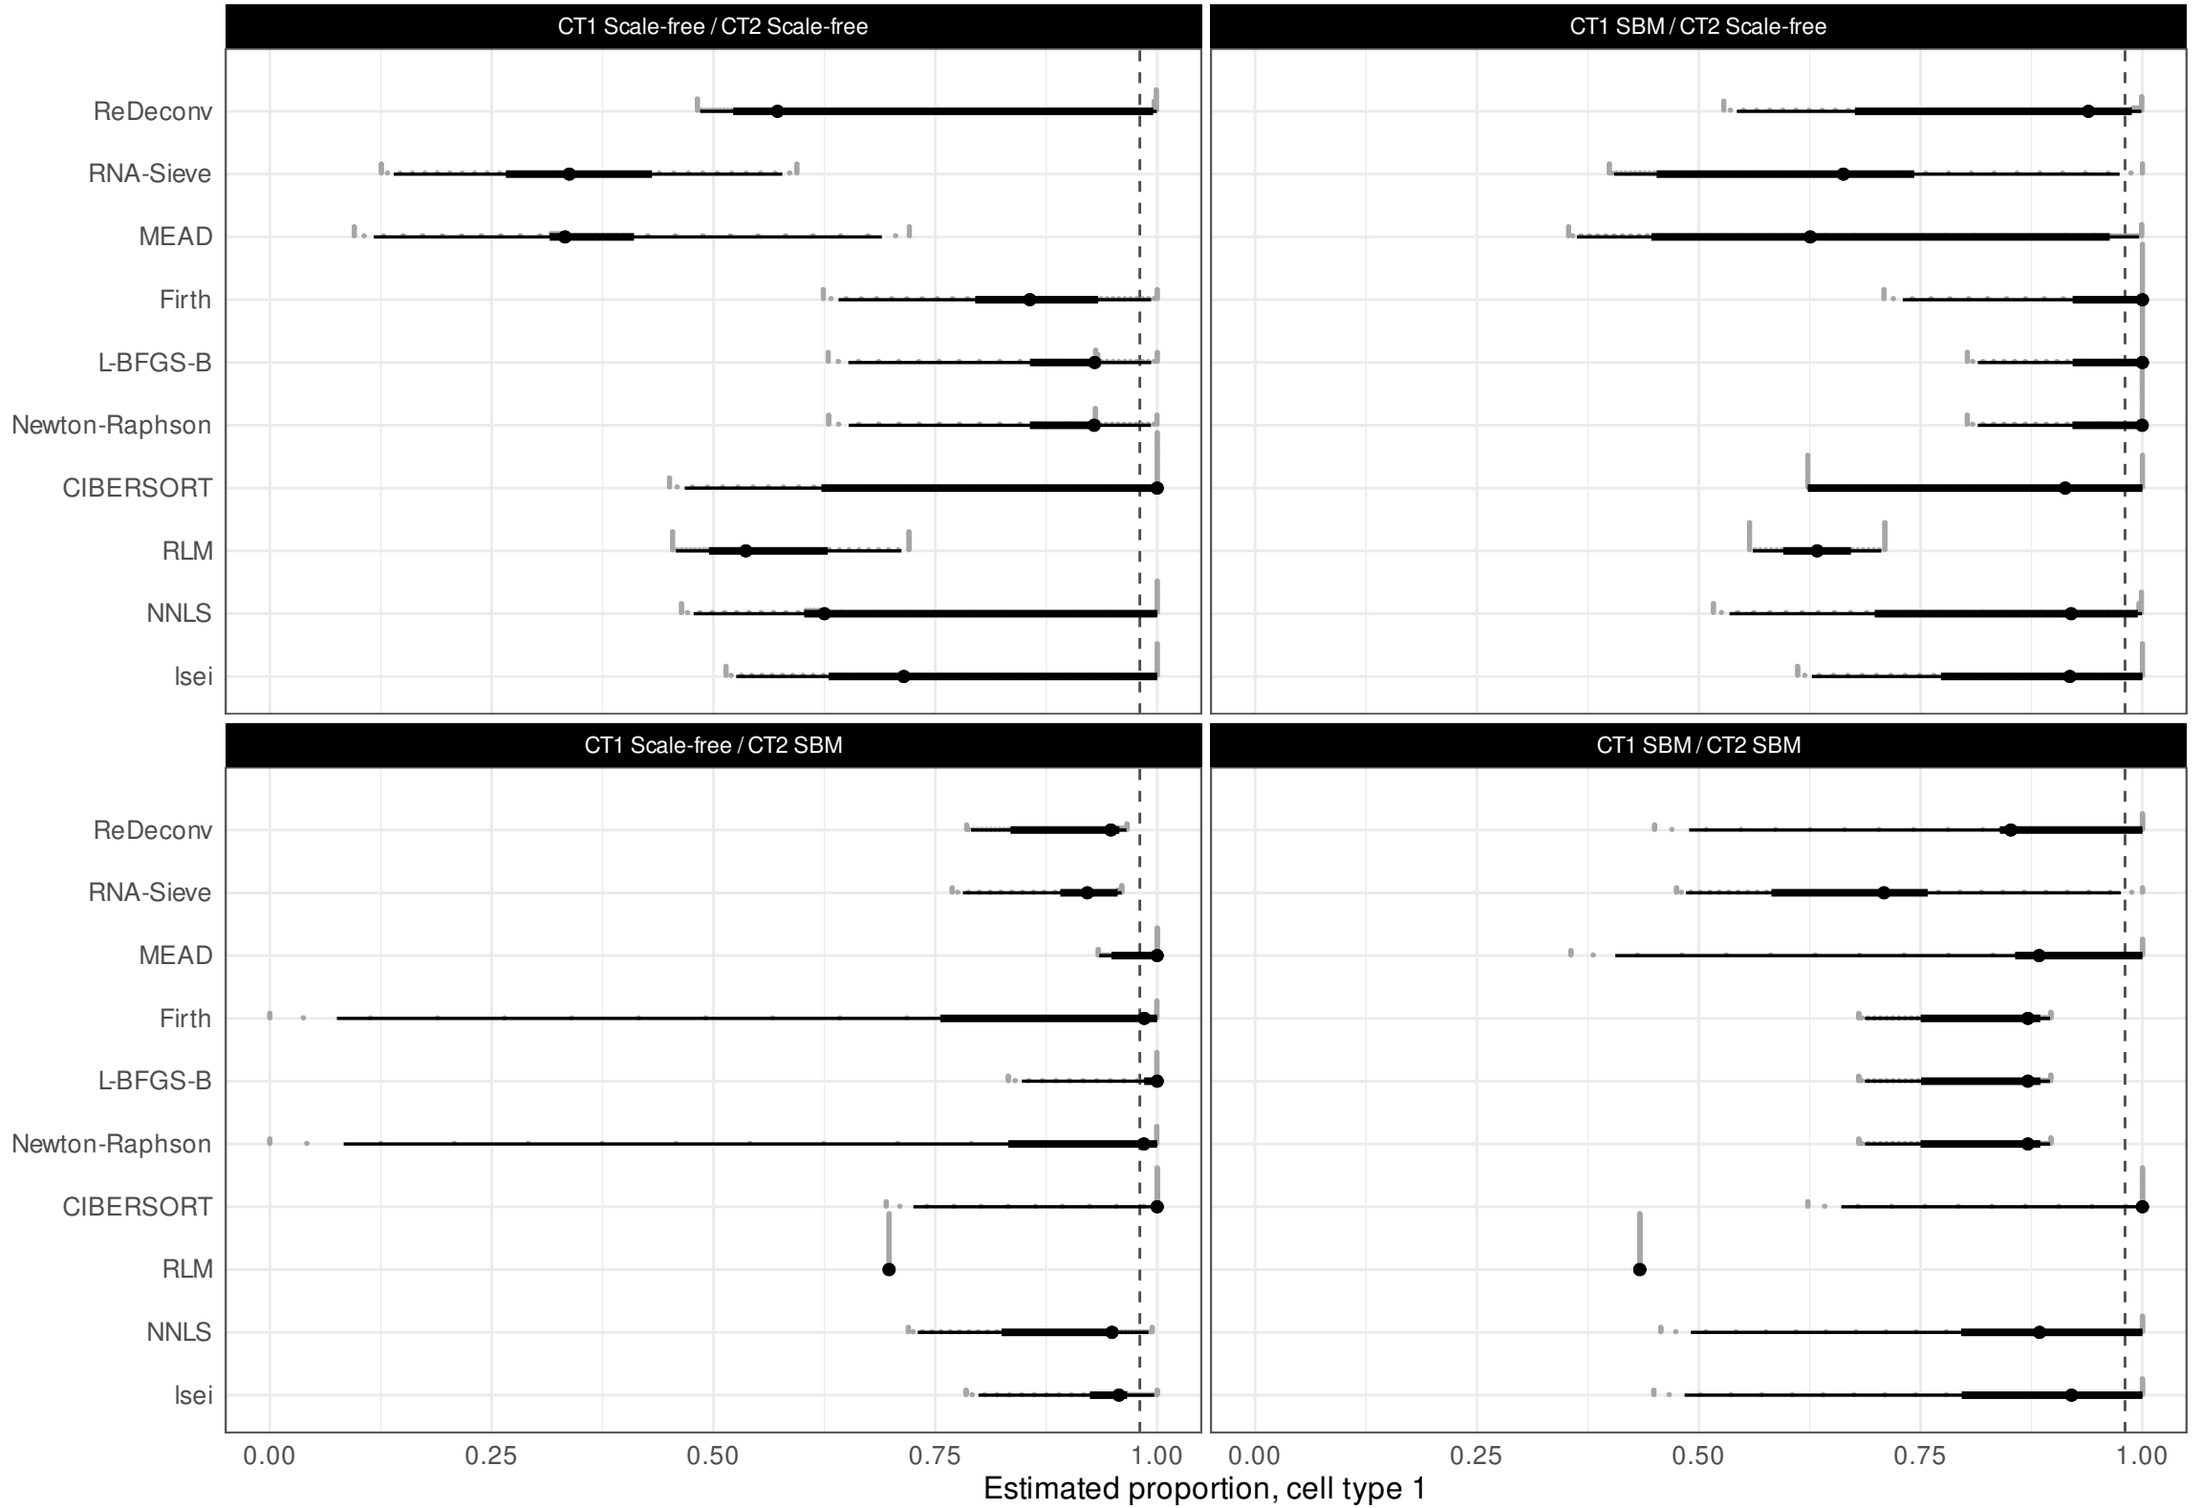

moderately unbalanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

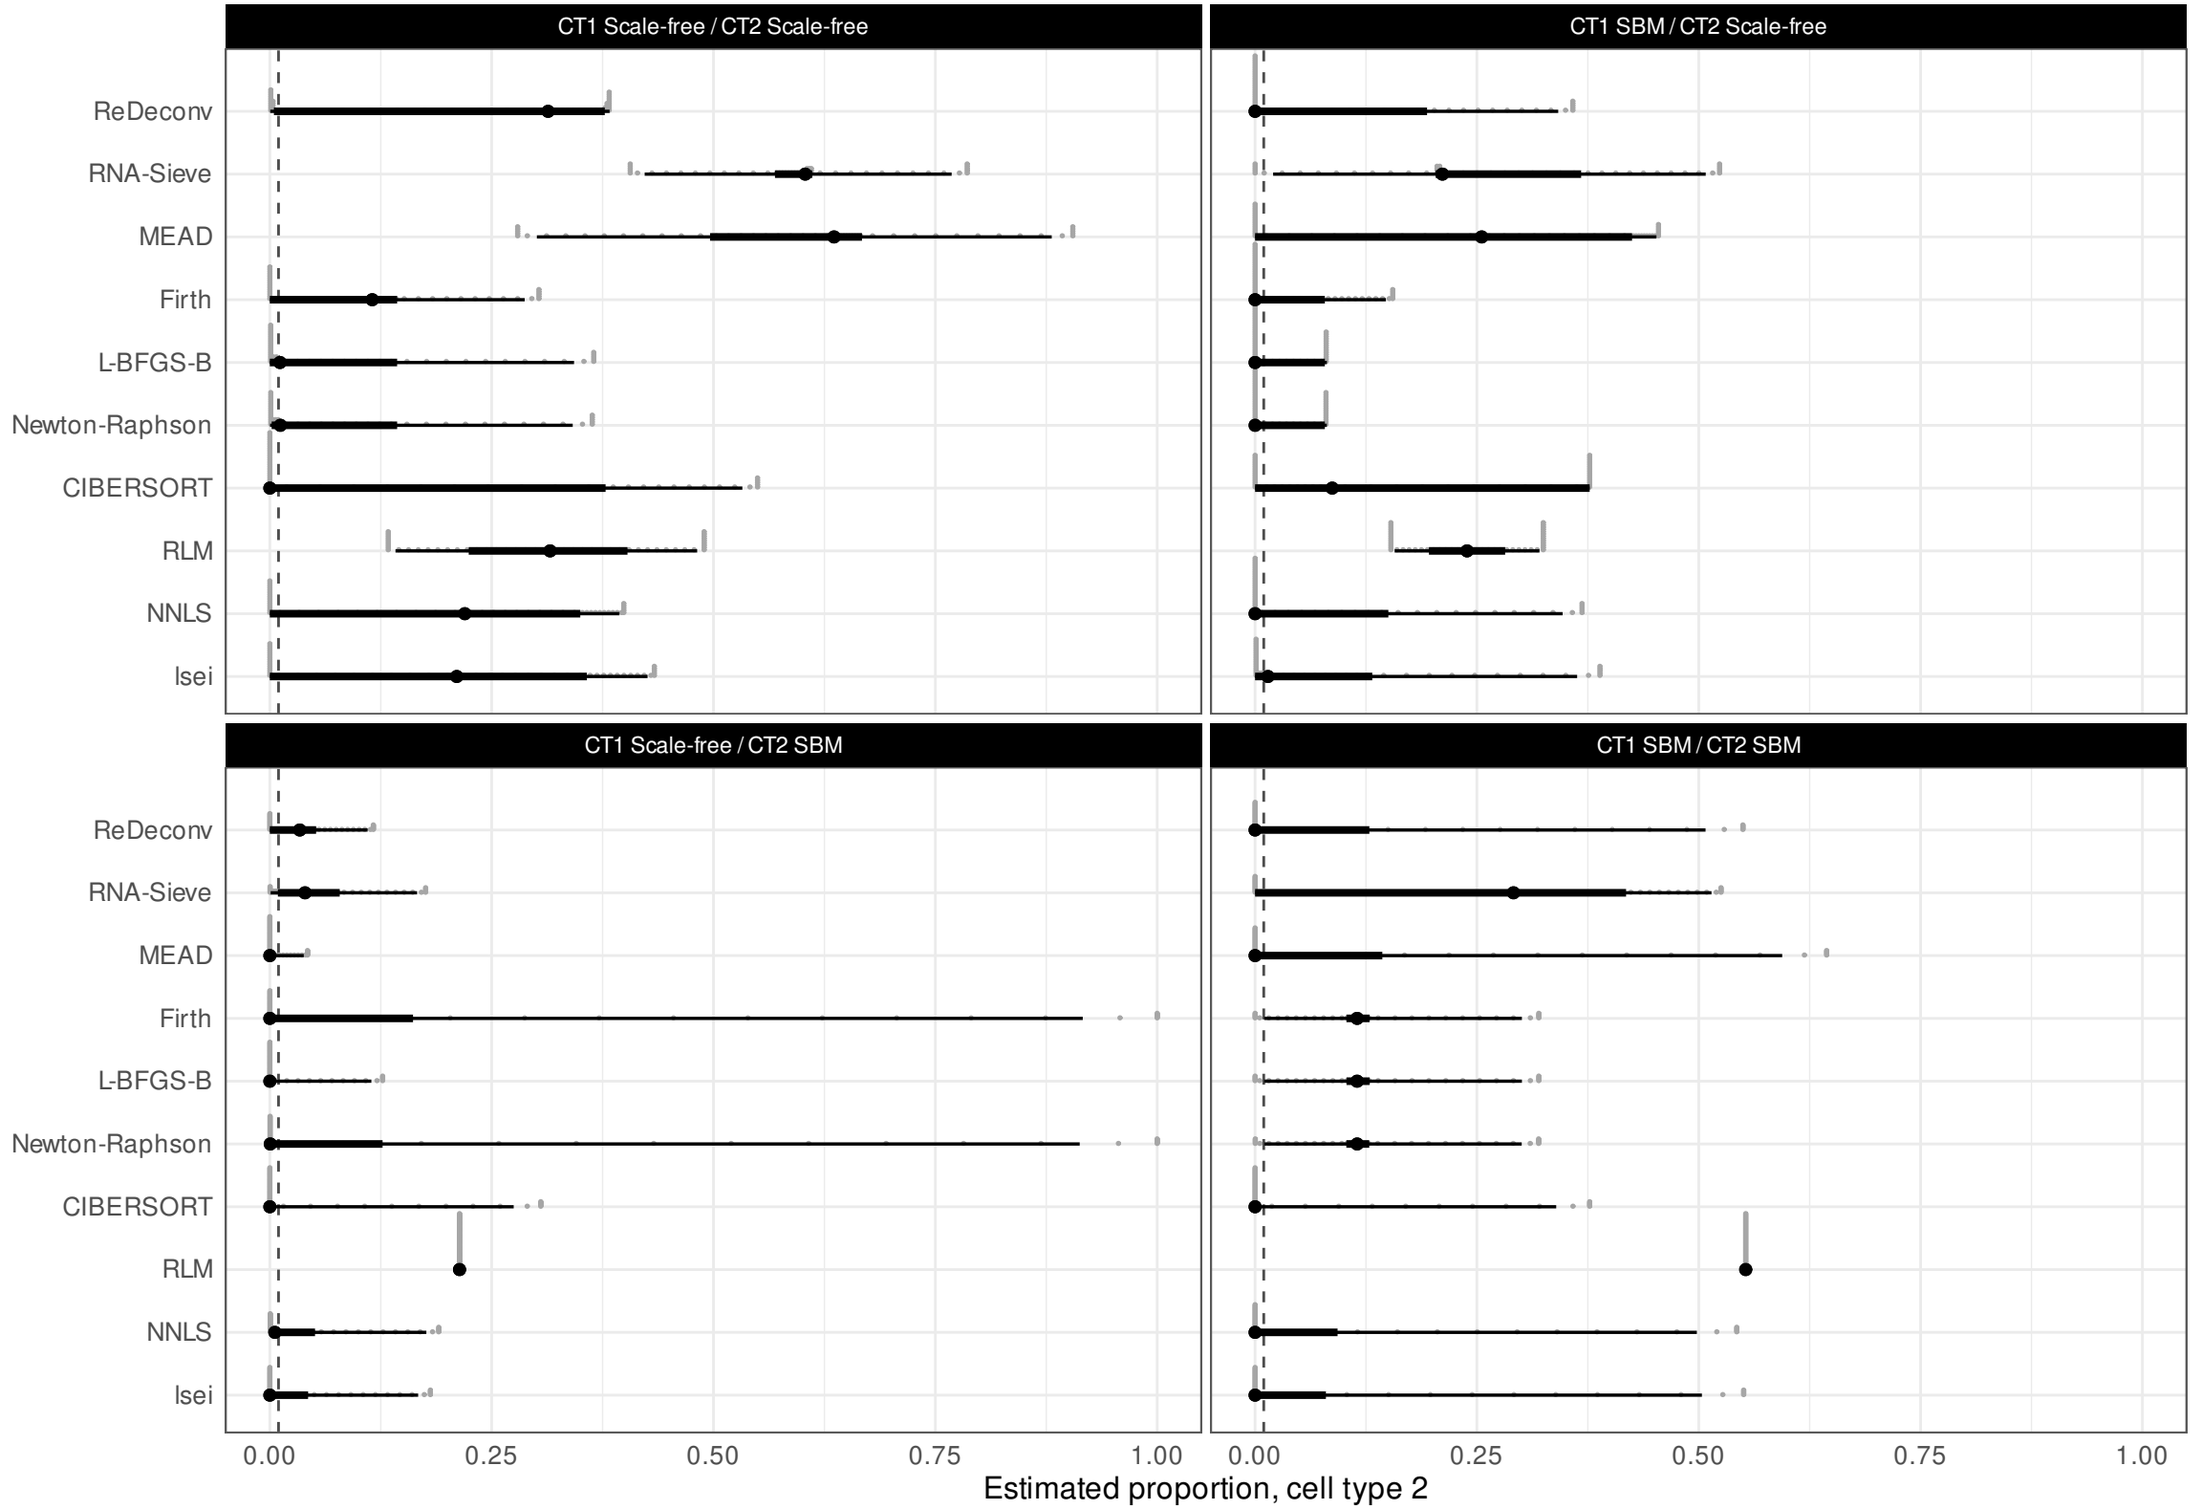

highly unbalanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

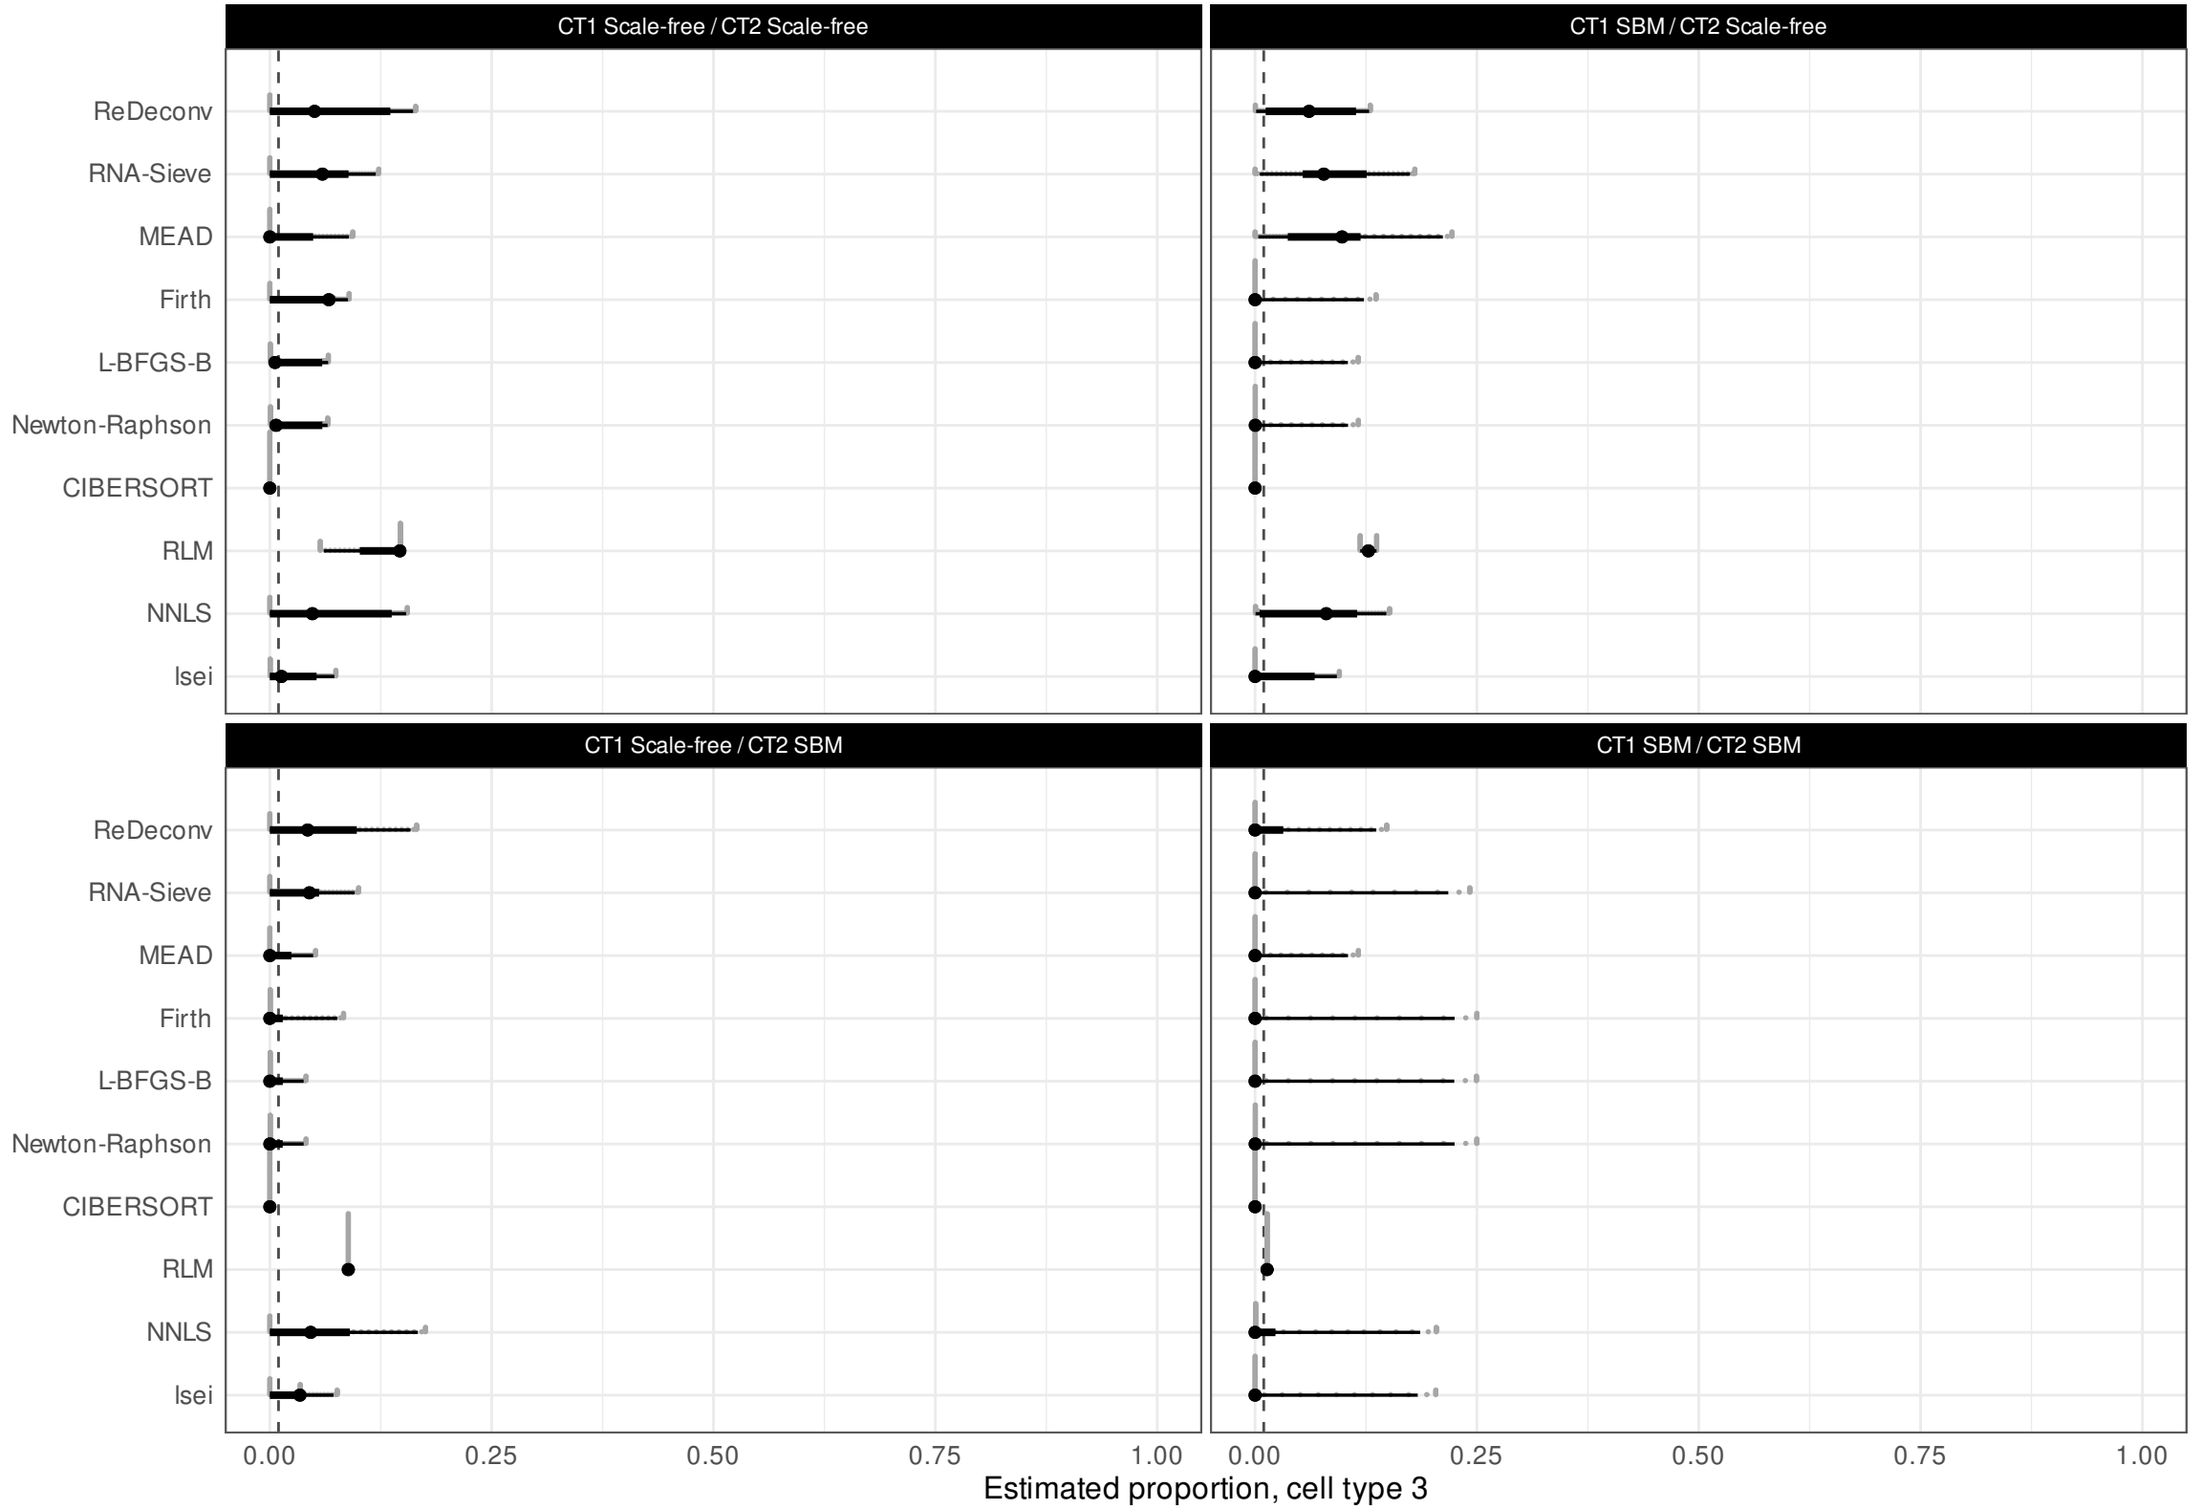

highly unbalanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

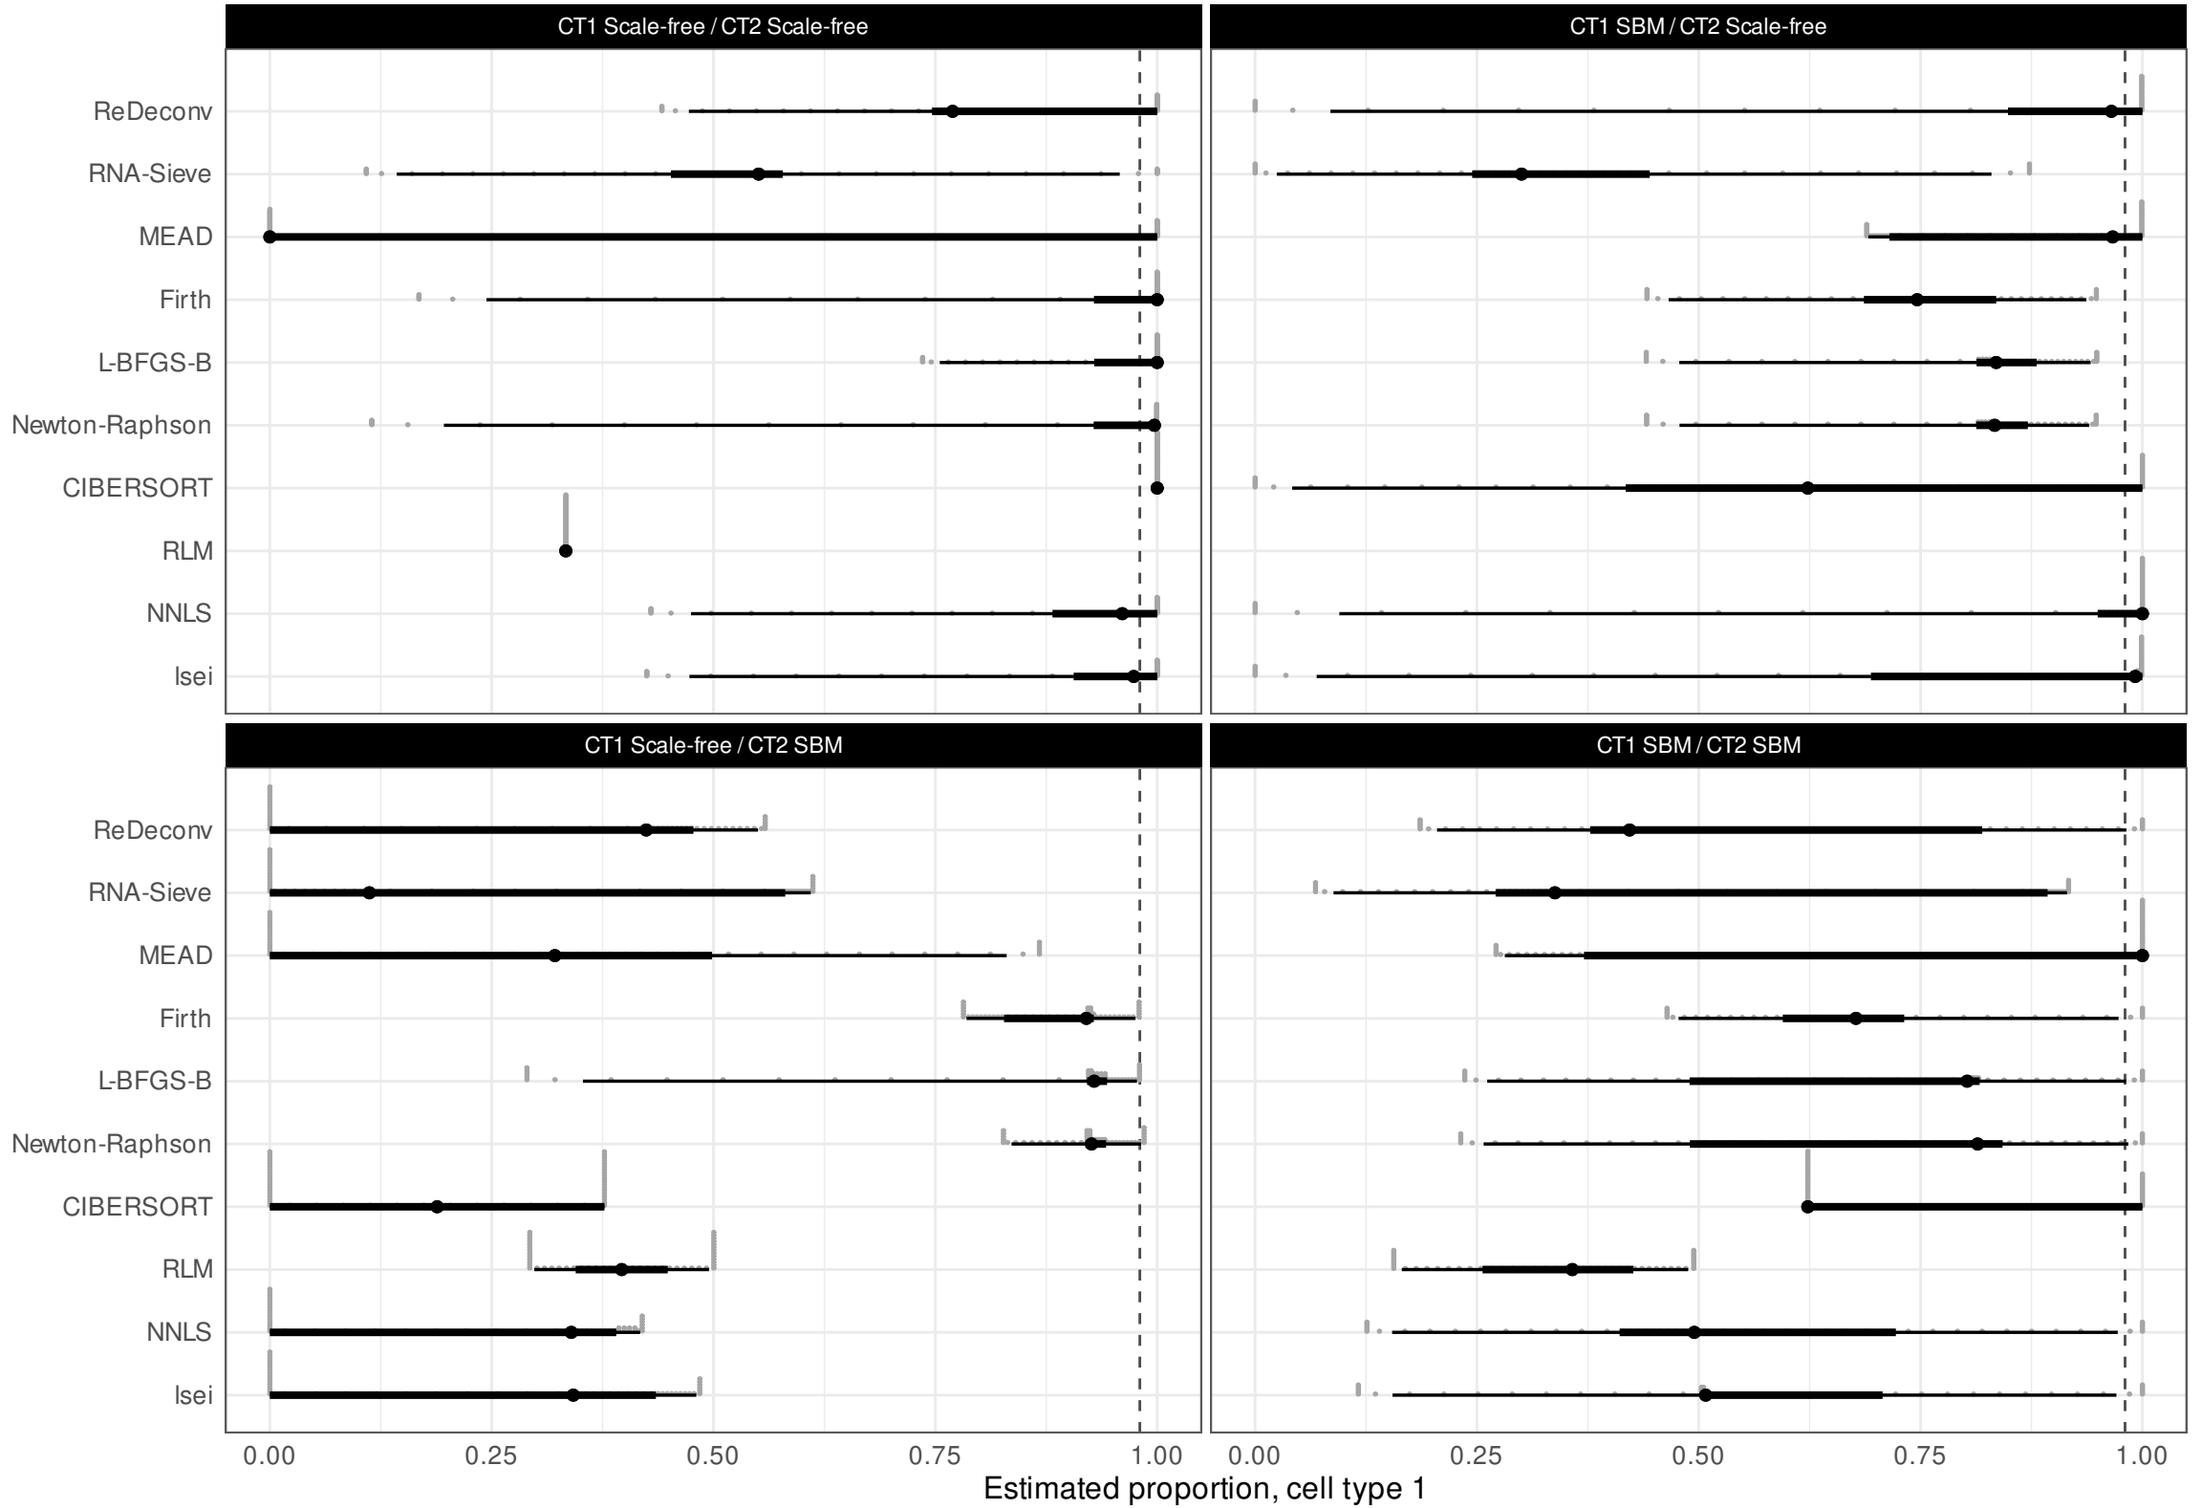

highly unbalanced / low overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

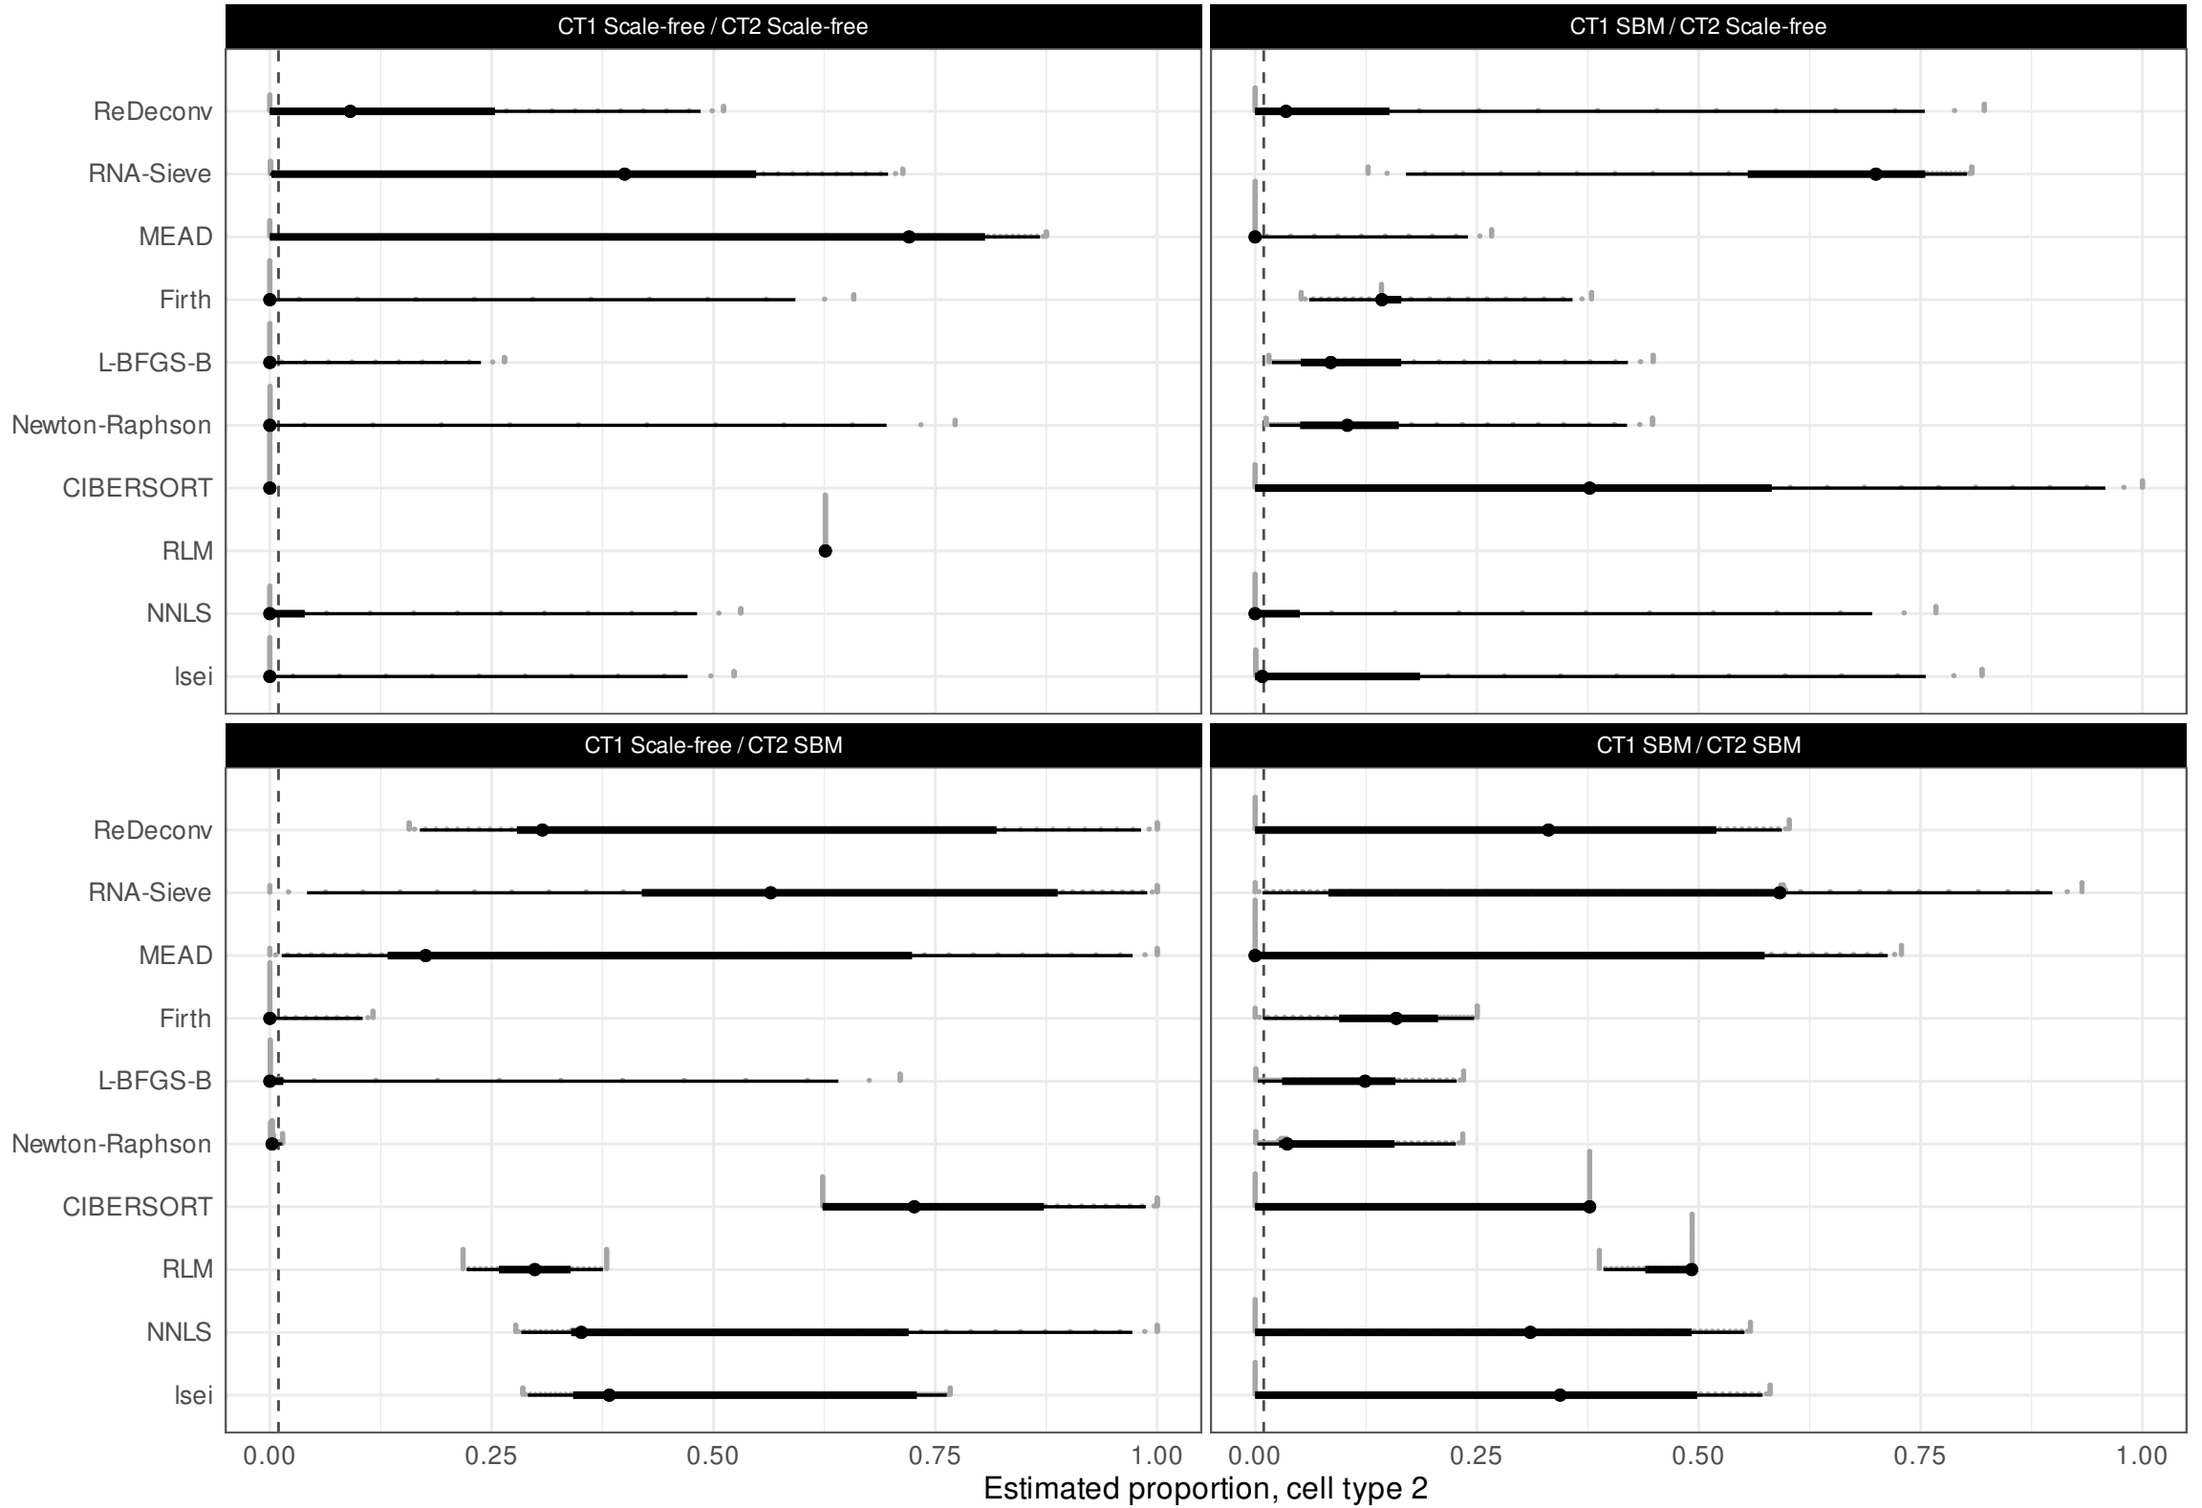

highly unbalanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

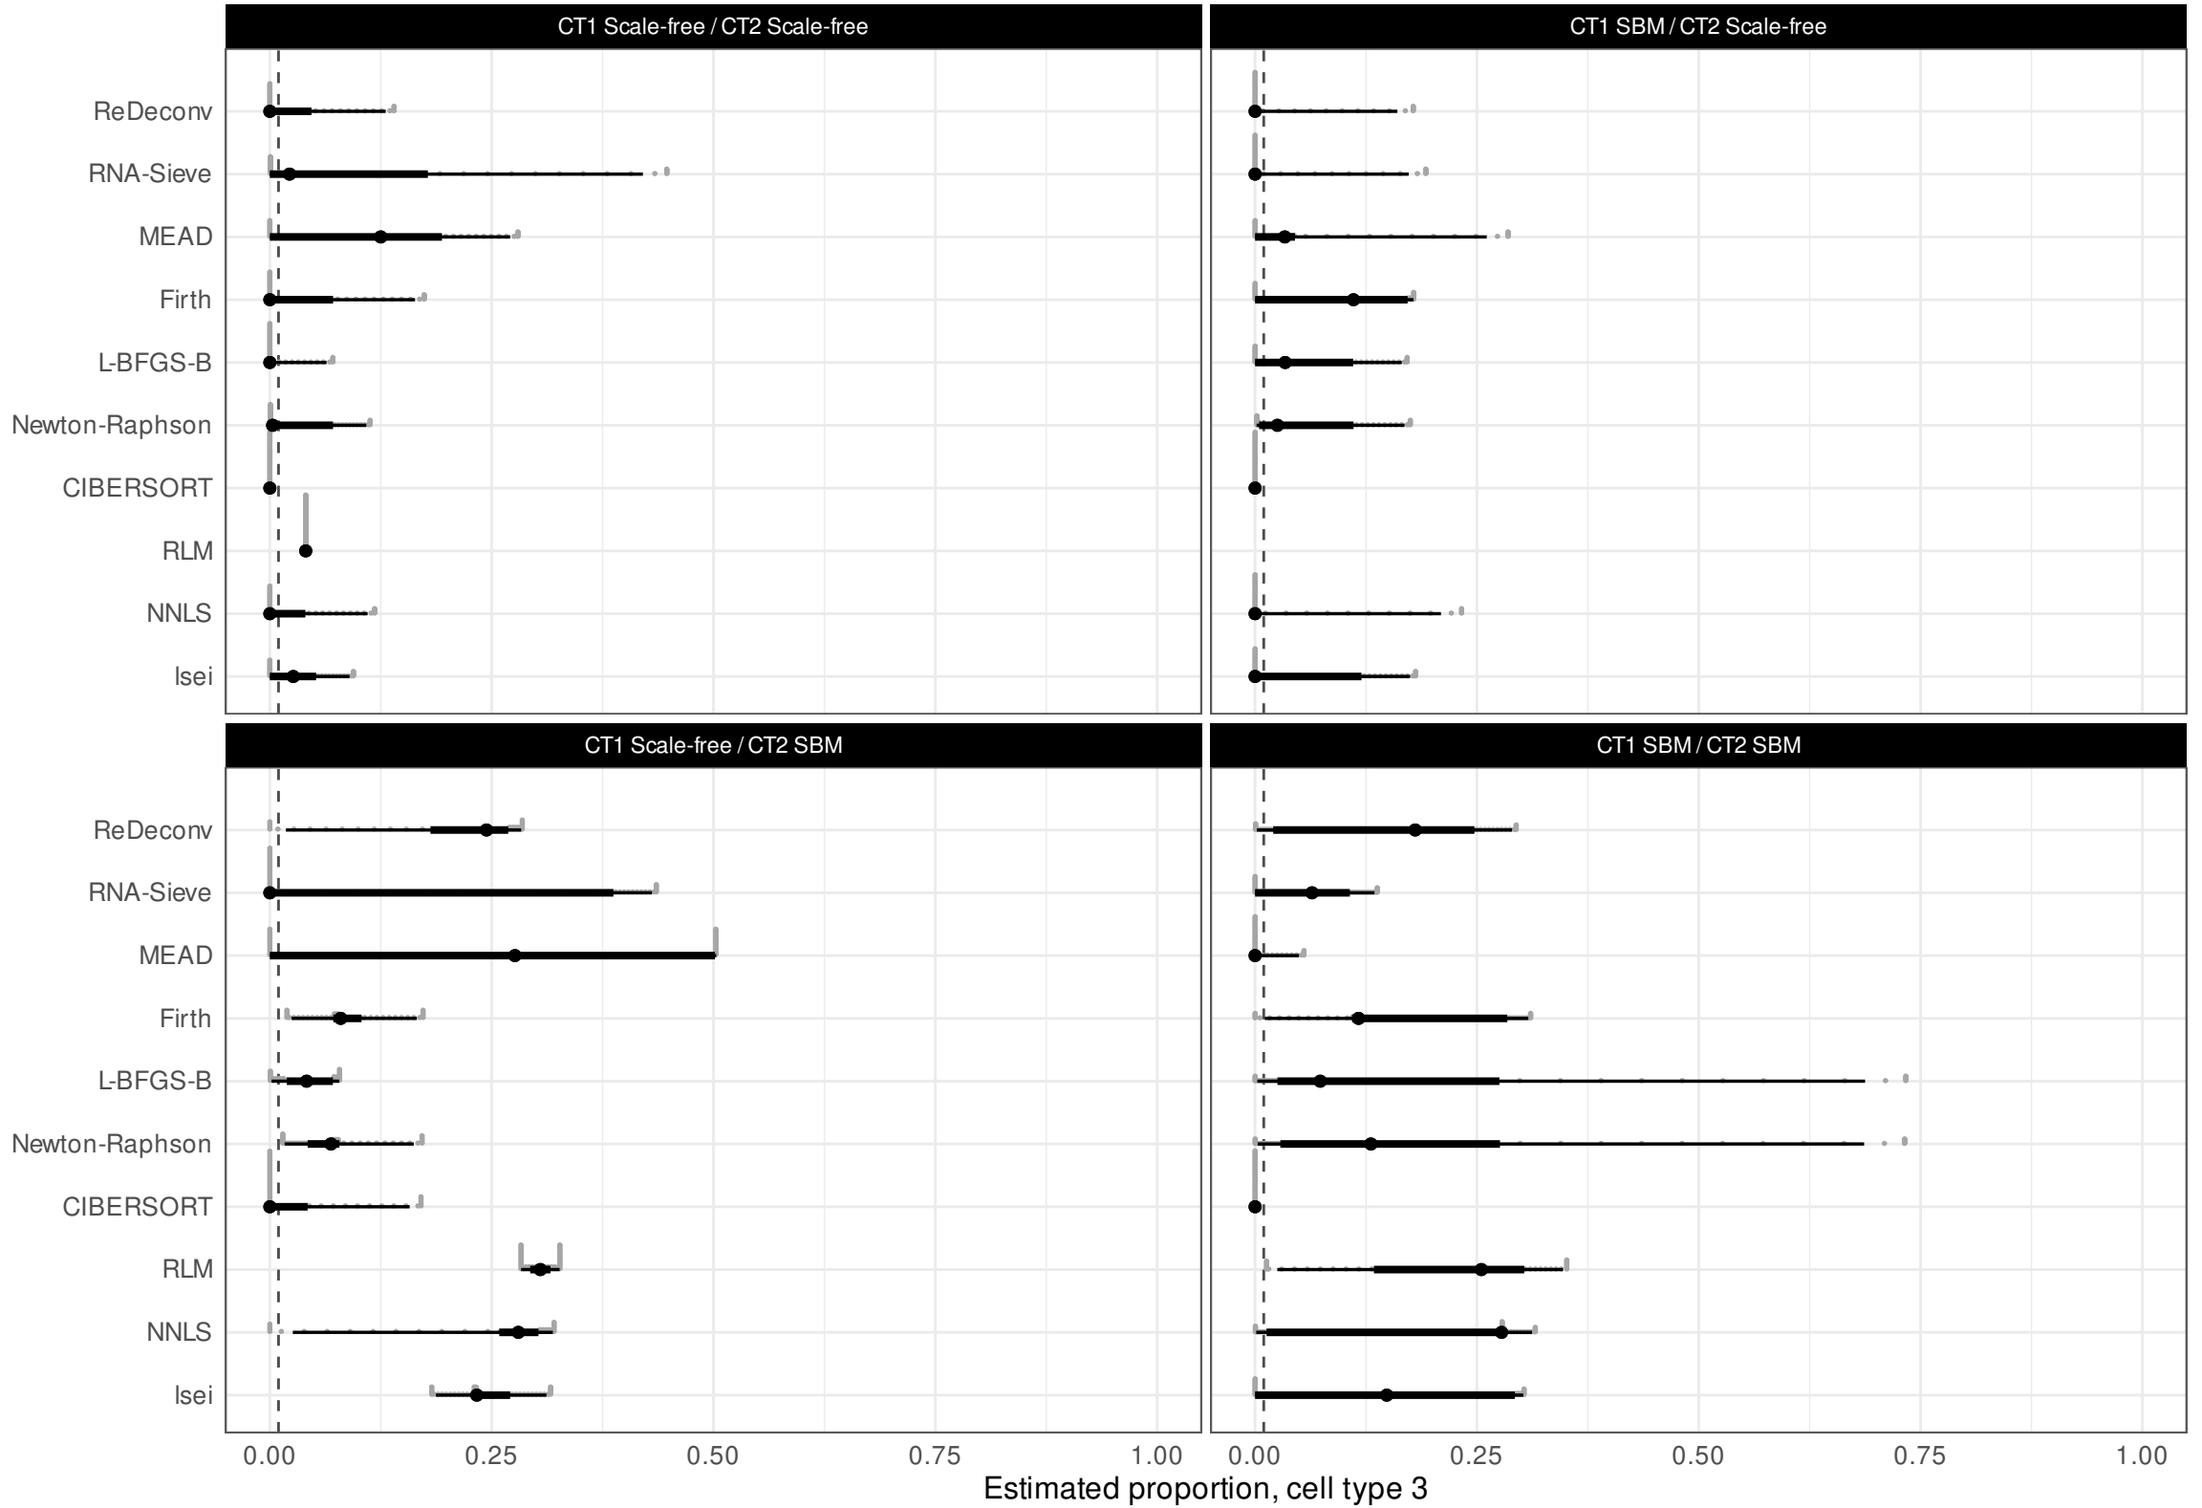

highly unbalanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

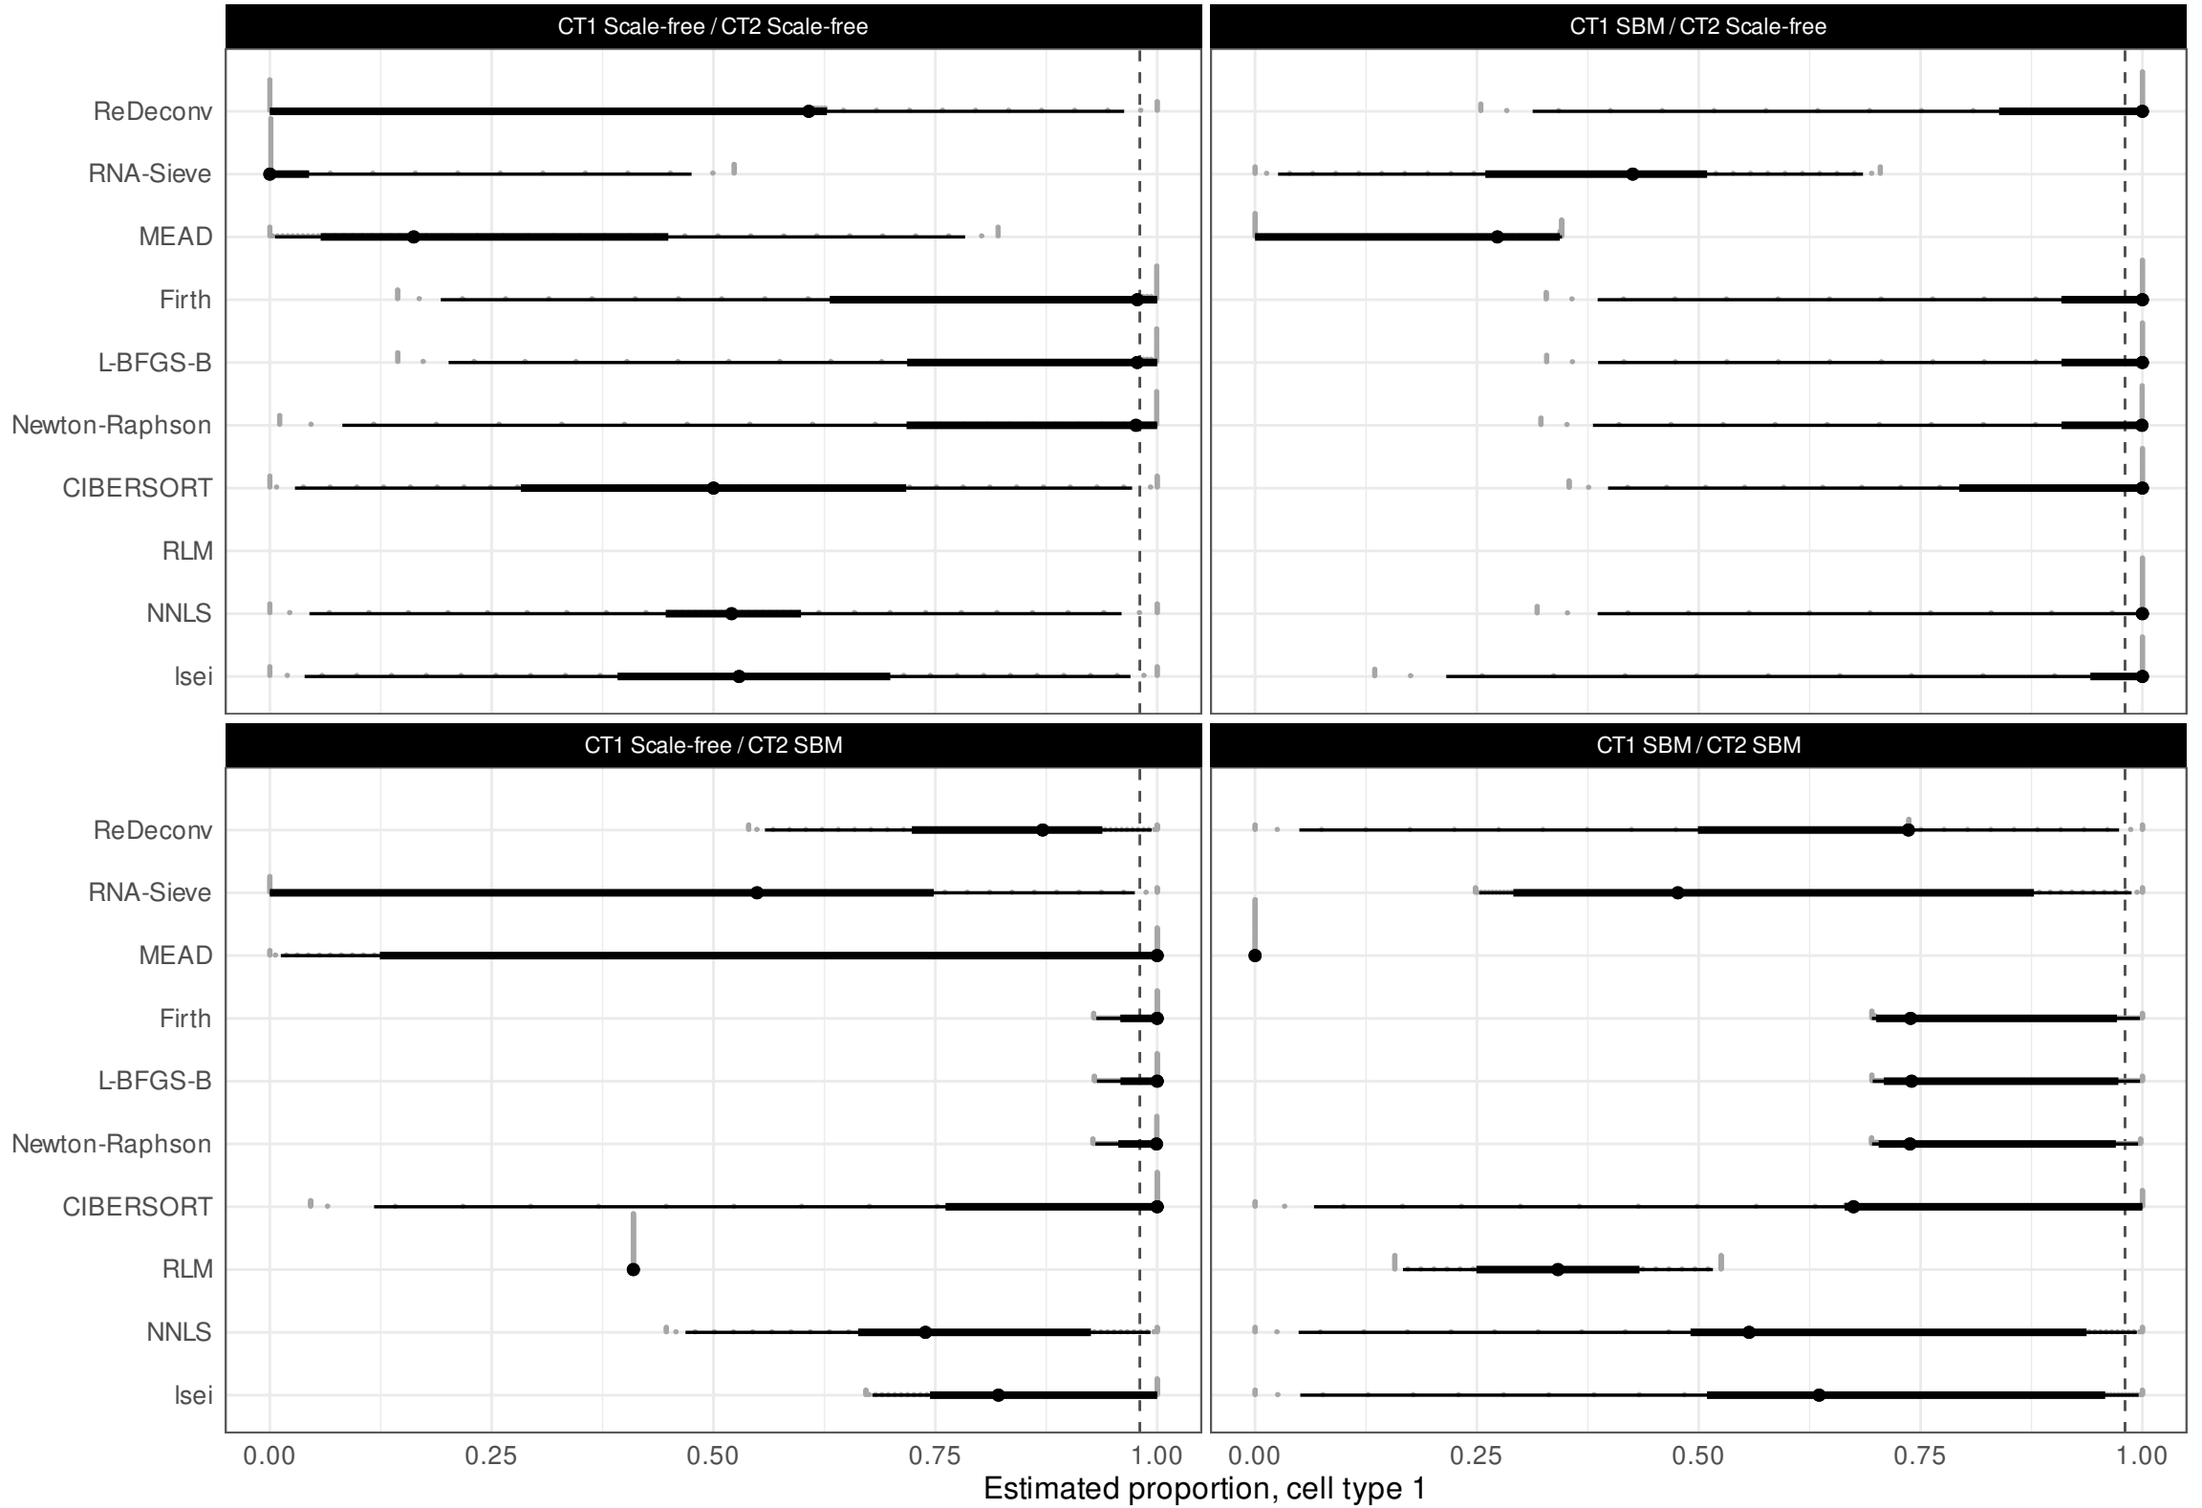

highly unbalanced / moderate overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

highly unbalanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

highly unbalanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.

Monte Carlo law of the estimates: 50 quantile dots

highly unbalanced / high overlap

One estimate per simulated bulk; intervals: 50% and 95% Monte Carlo quantiles; dashed: mean target. Mass at 0 or 1 is an estimate on a face.
