Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

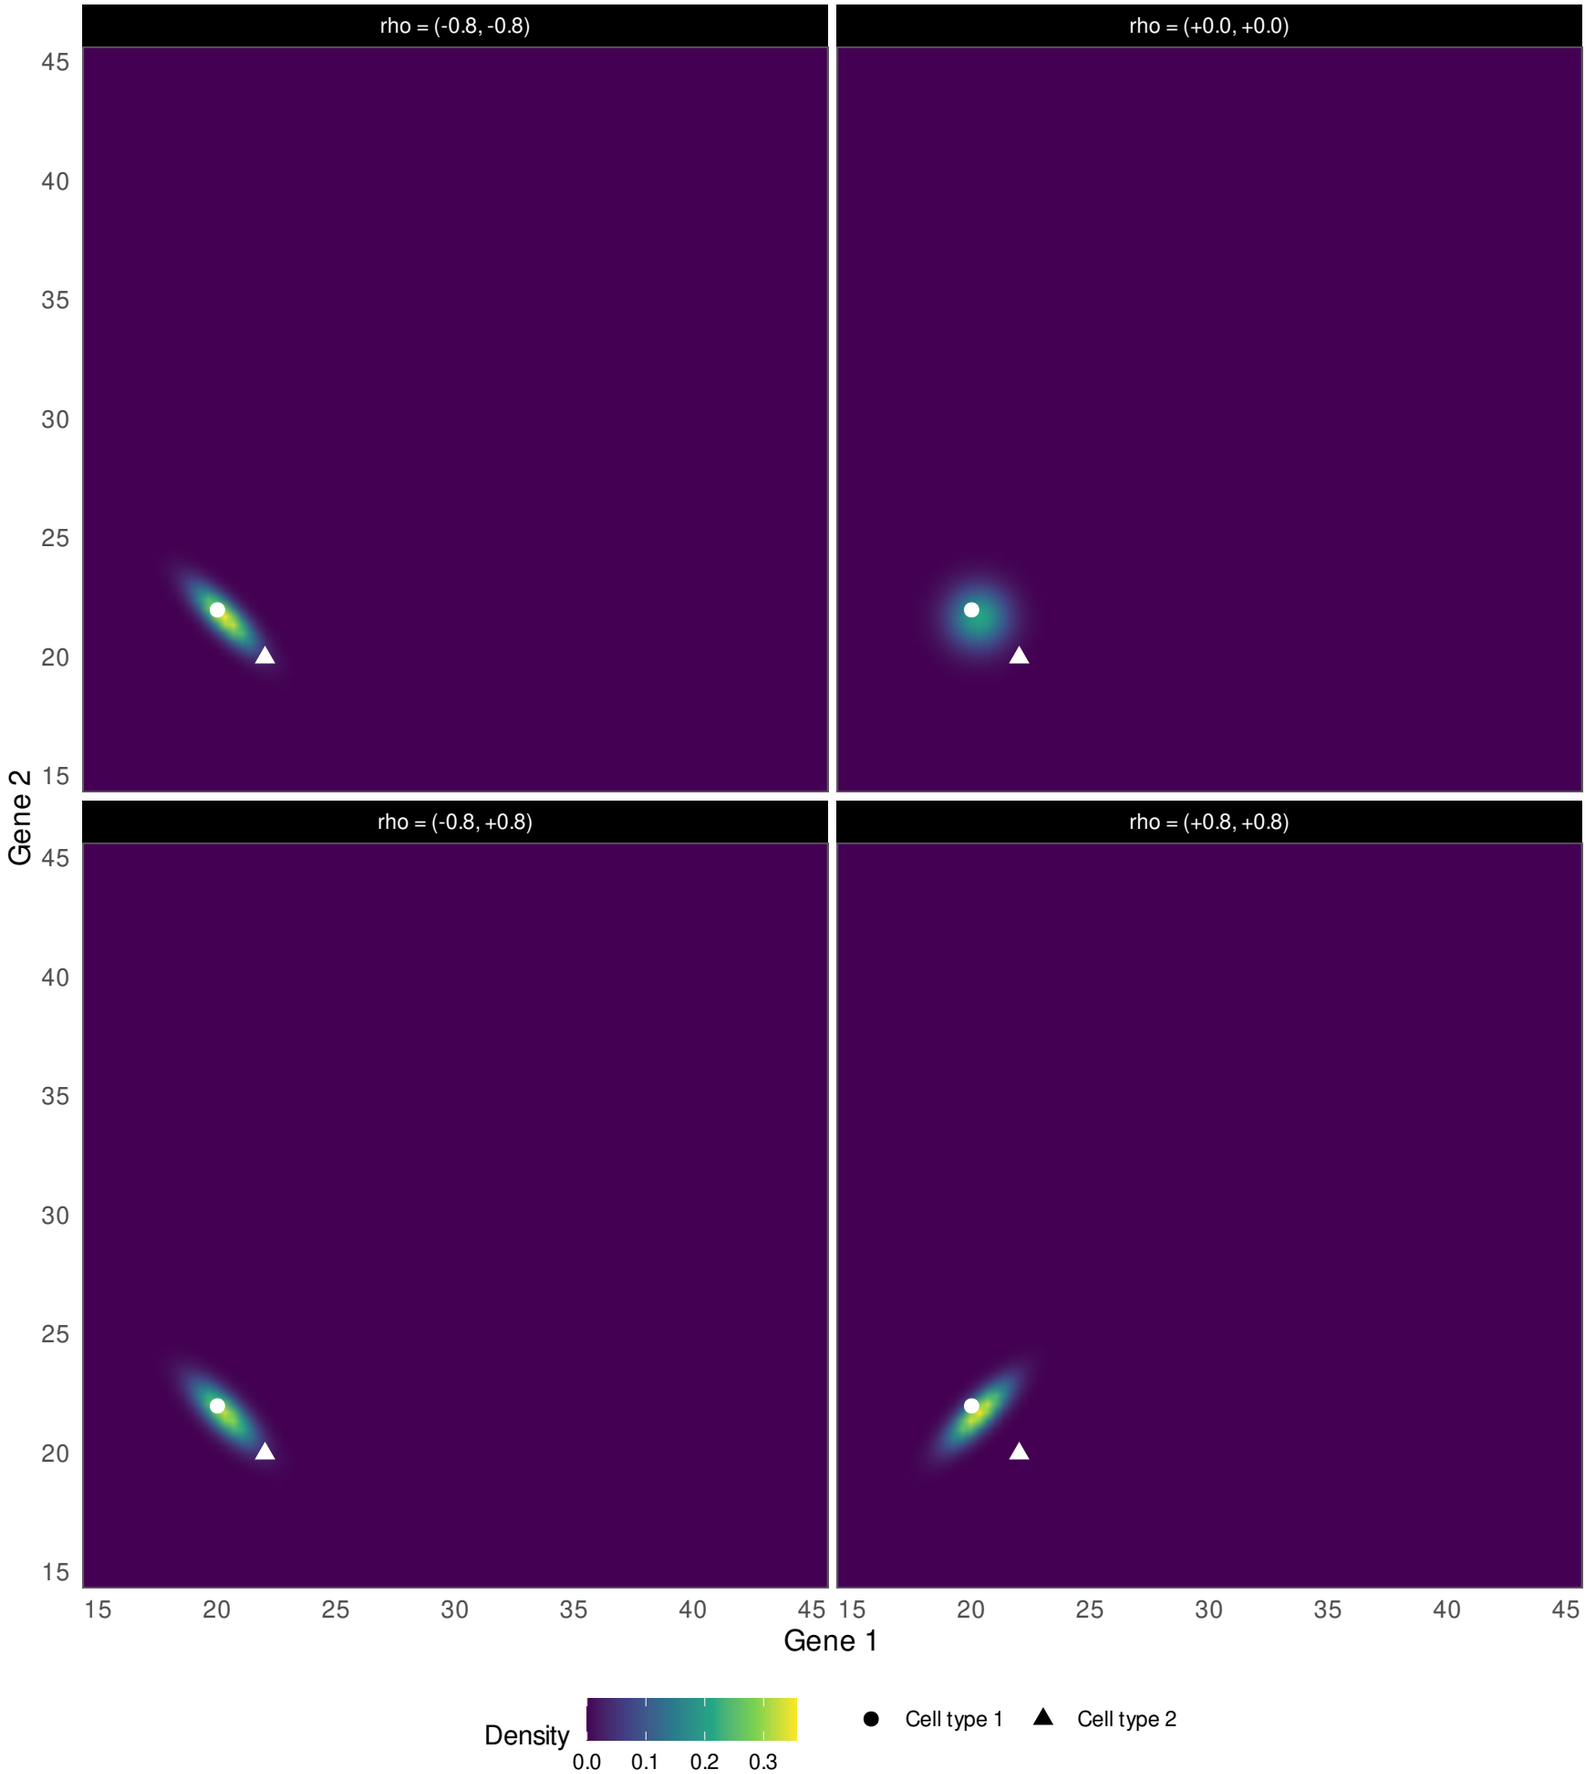

small centroid gap / homoscedastic / balanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

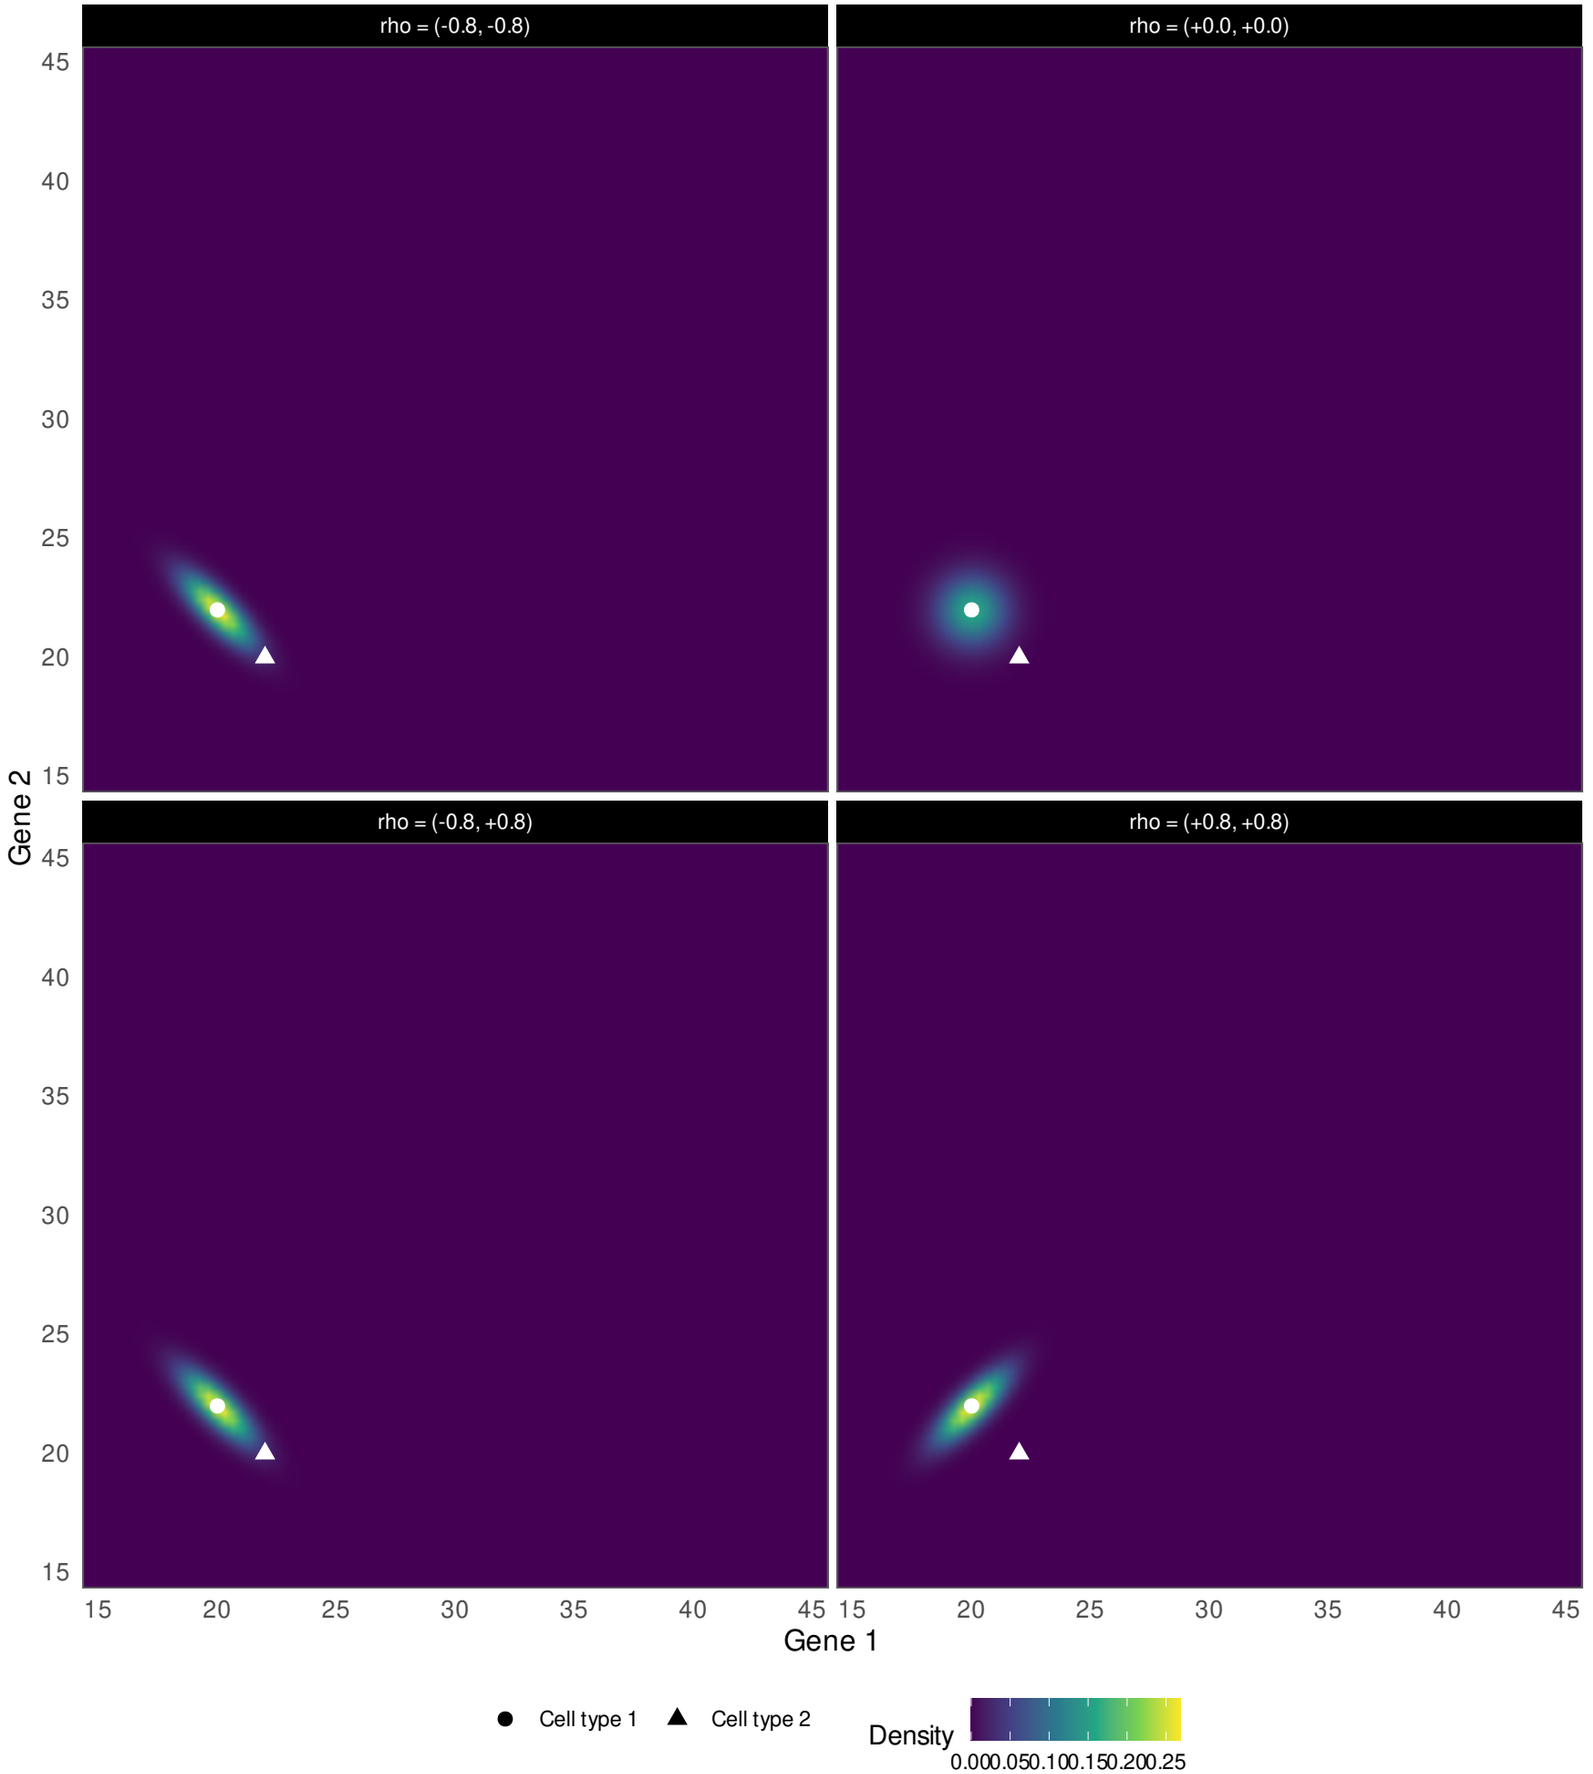

small centroid gap / homoscedastic / moderately unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

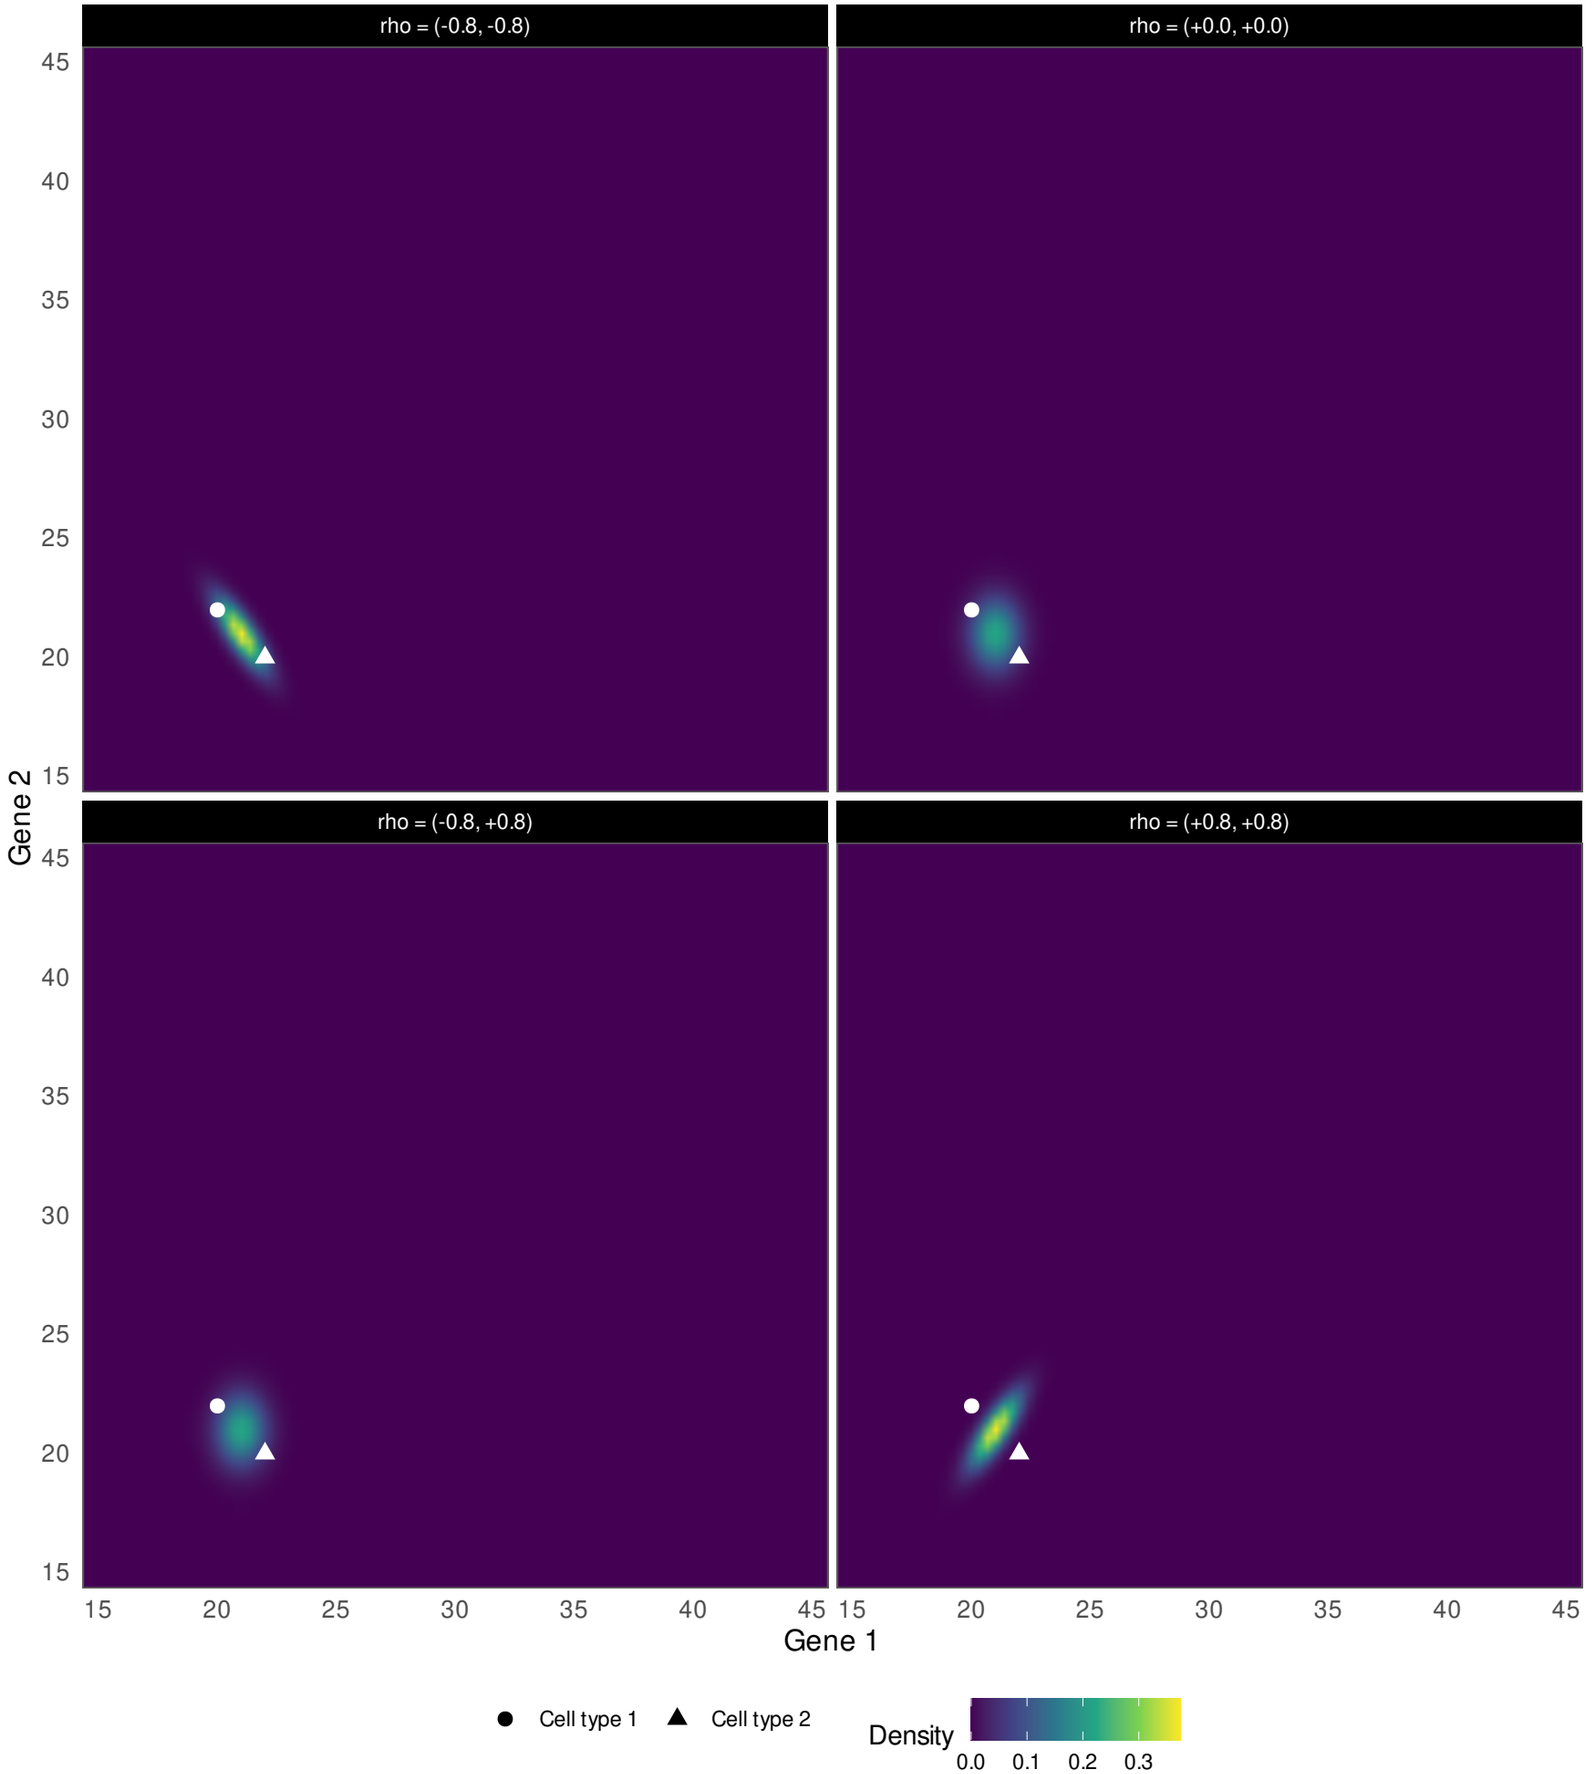

small centroid gap / homoscedastic / highly unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

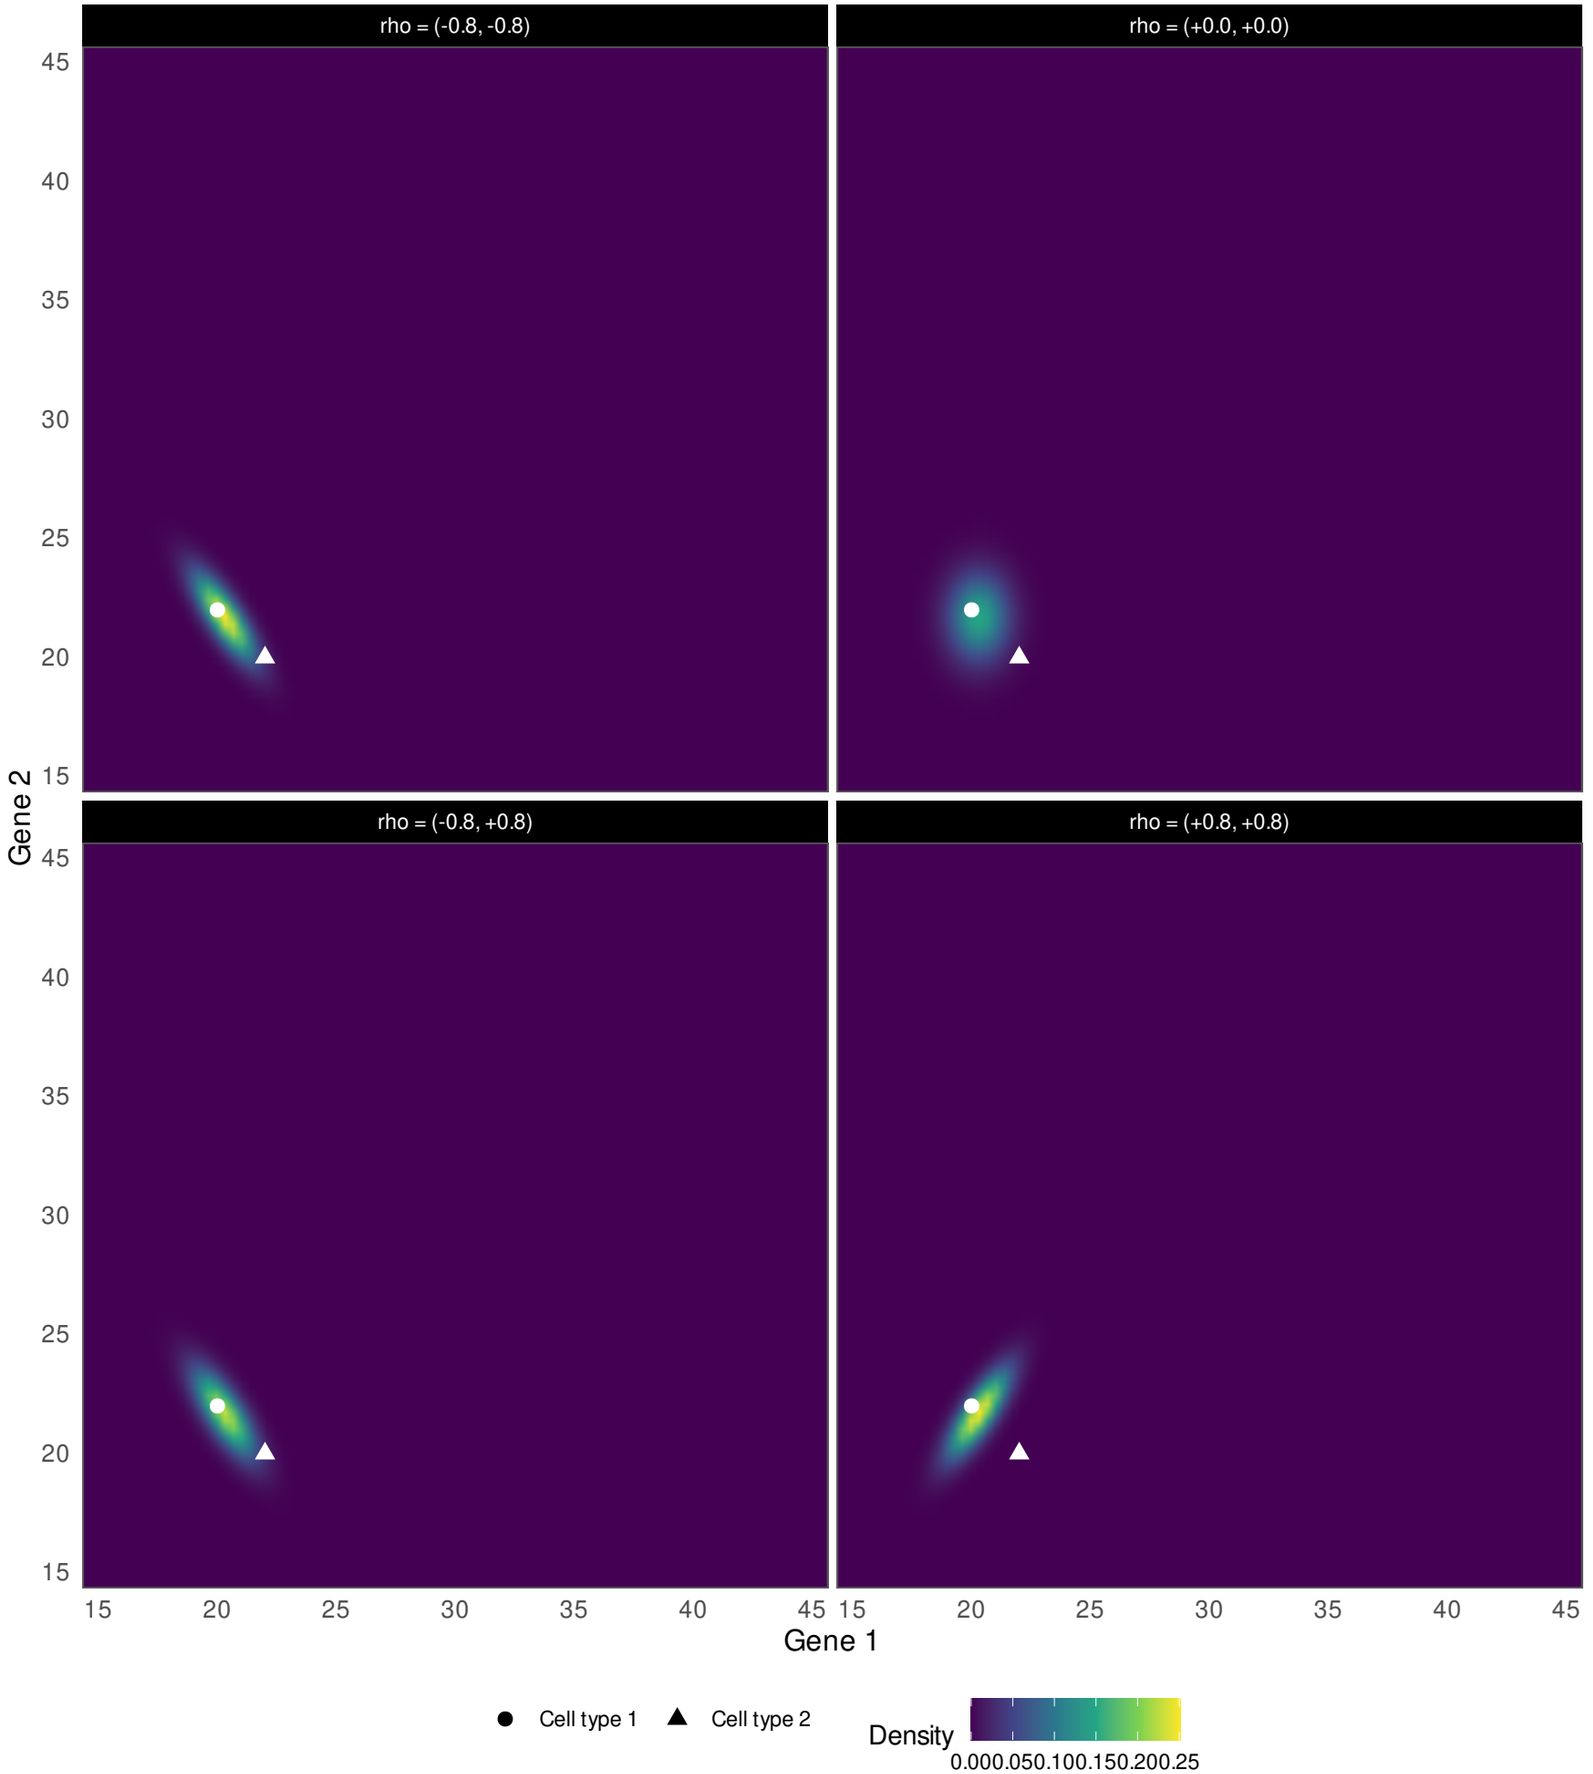

small centroid gap / heteroscedastic / balanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

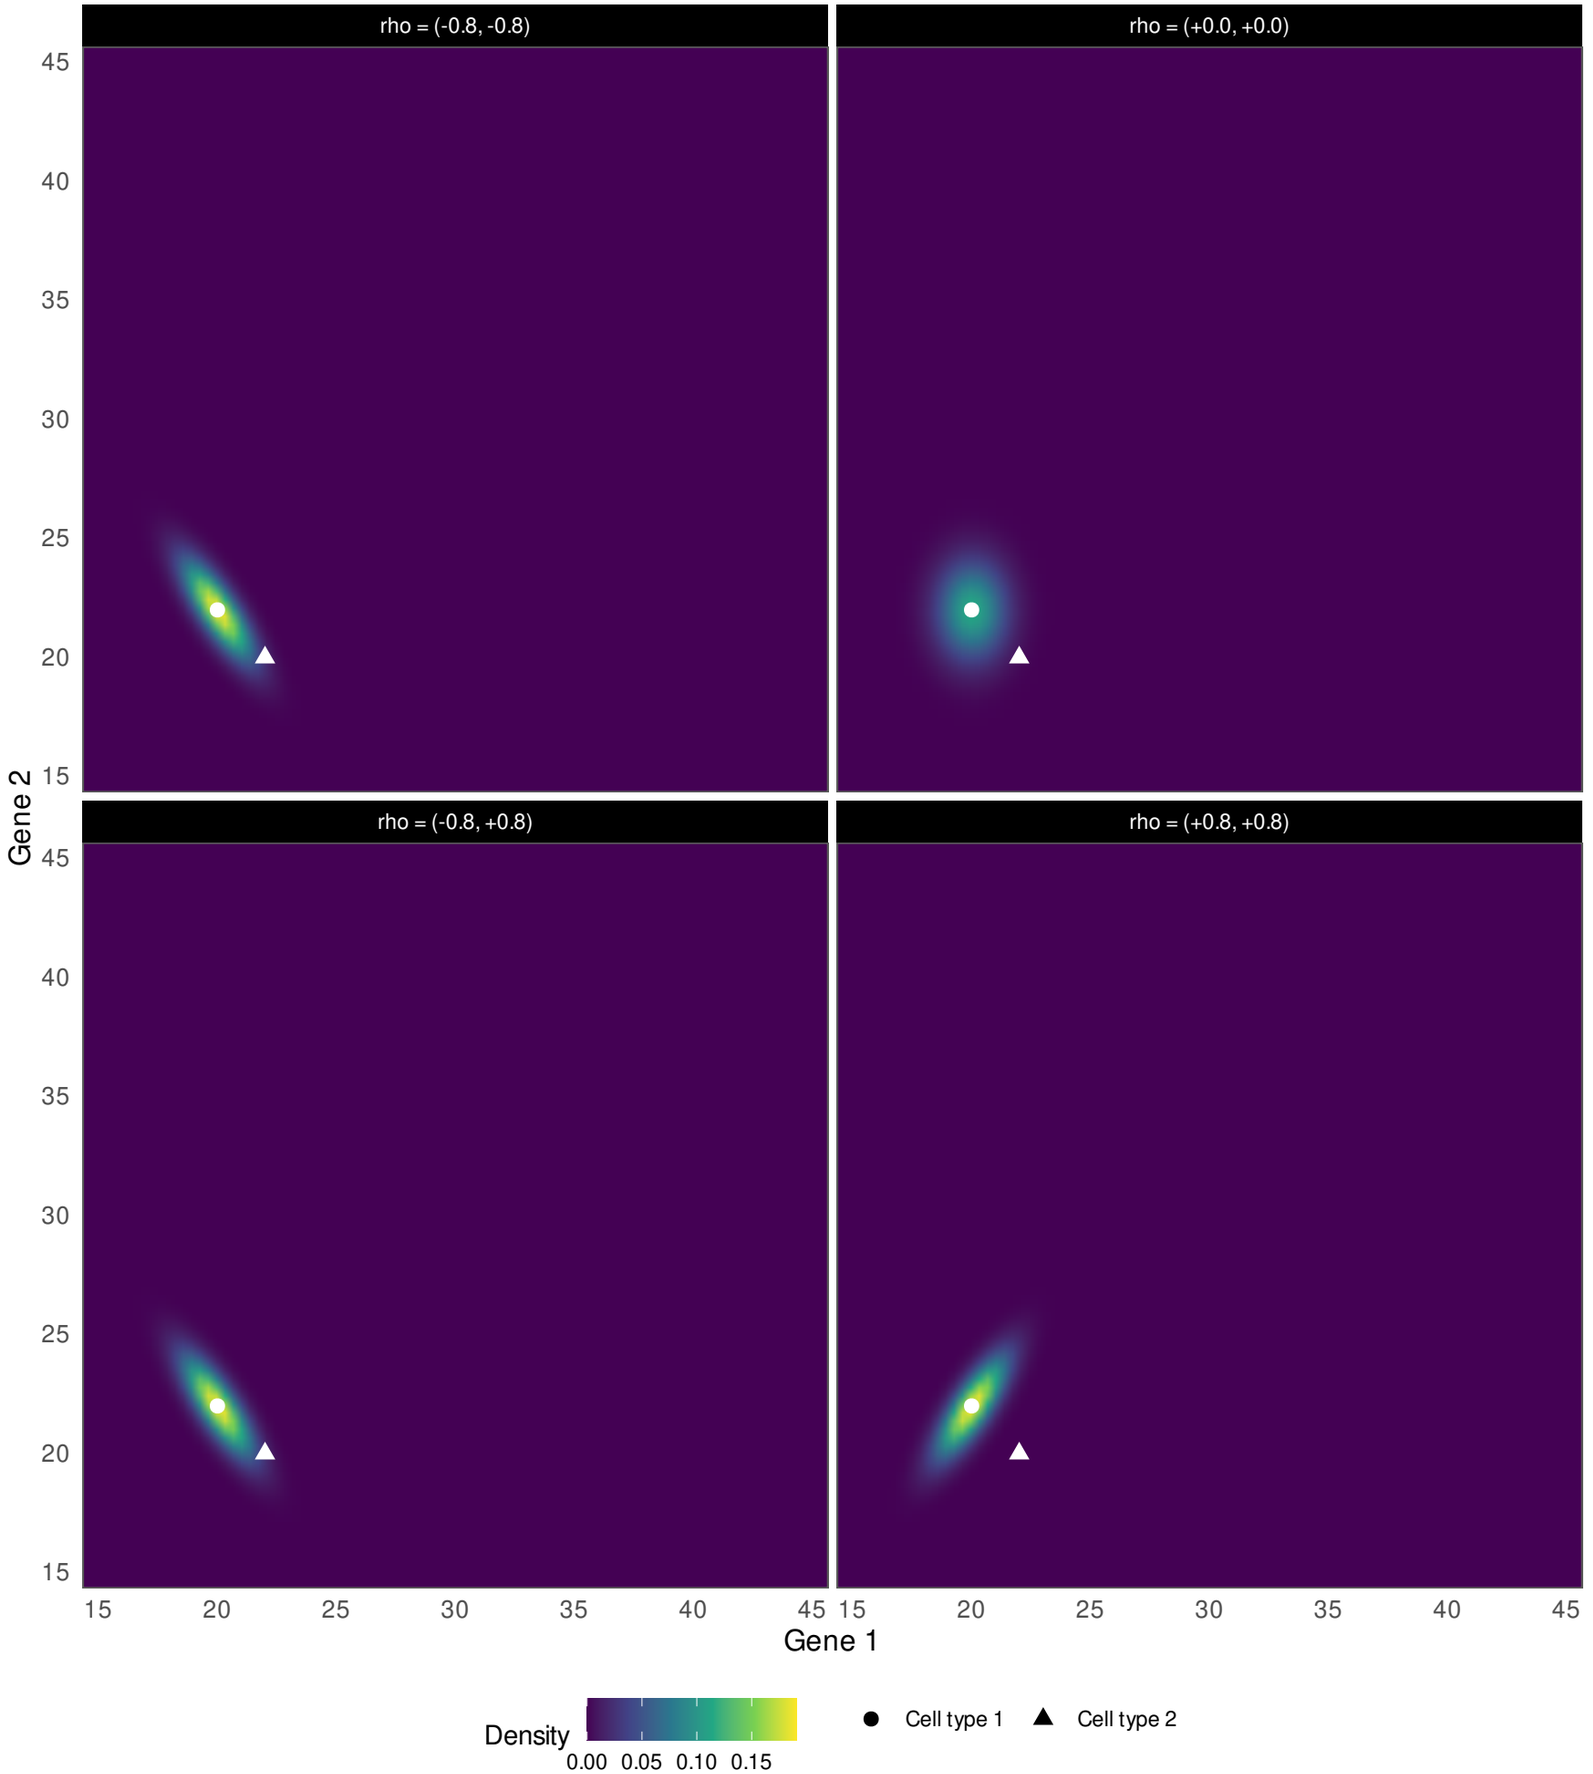

small centroid gap / heteroscedastic / moderately unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

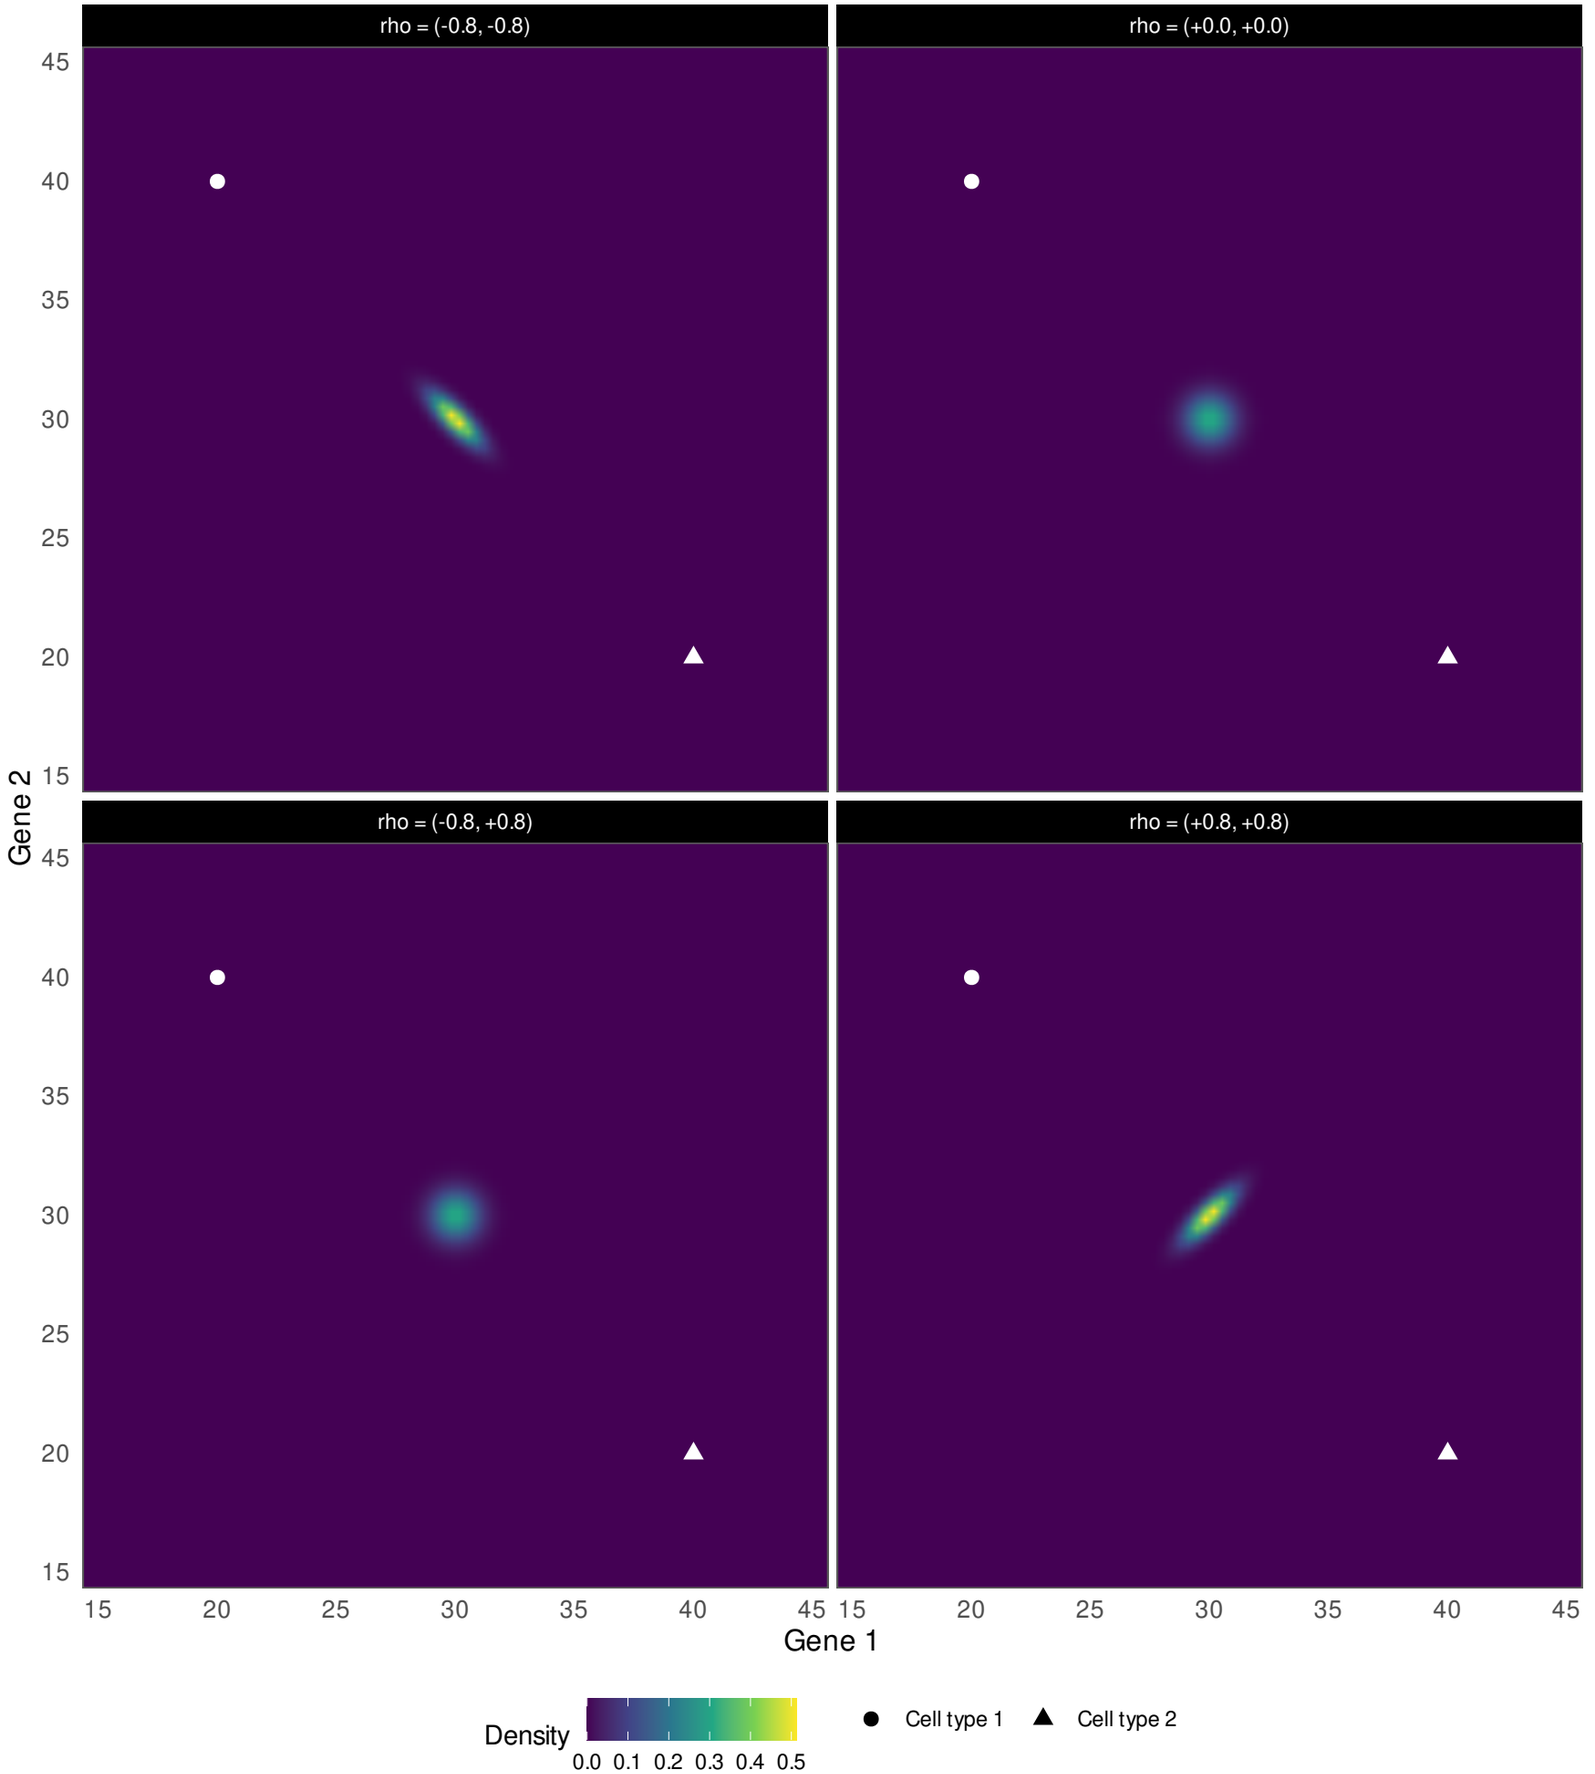

small centroid gap / heteroscedastic / highly unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

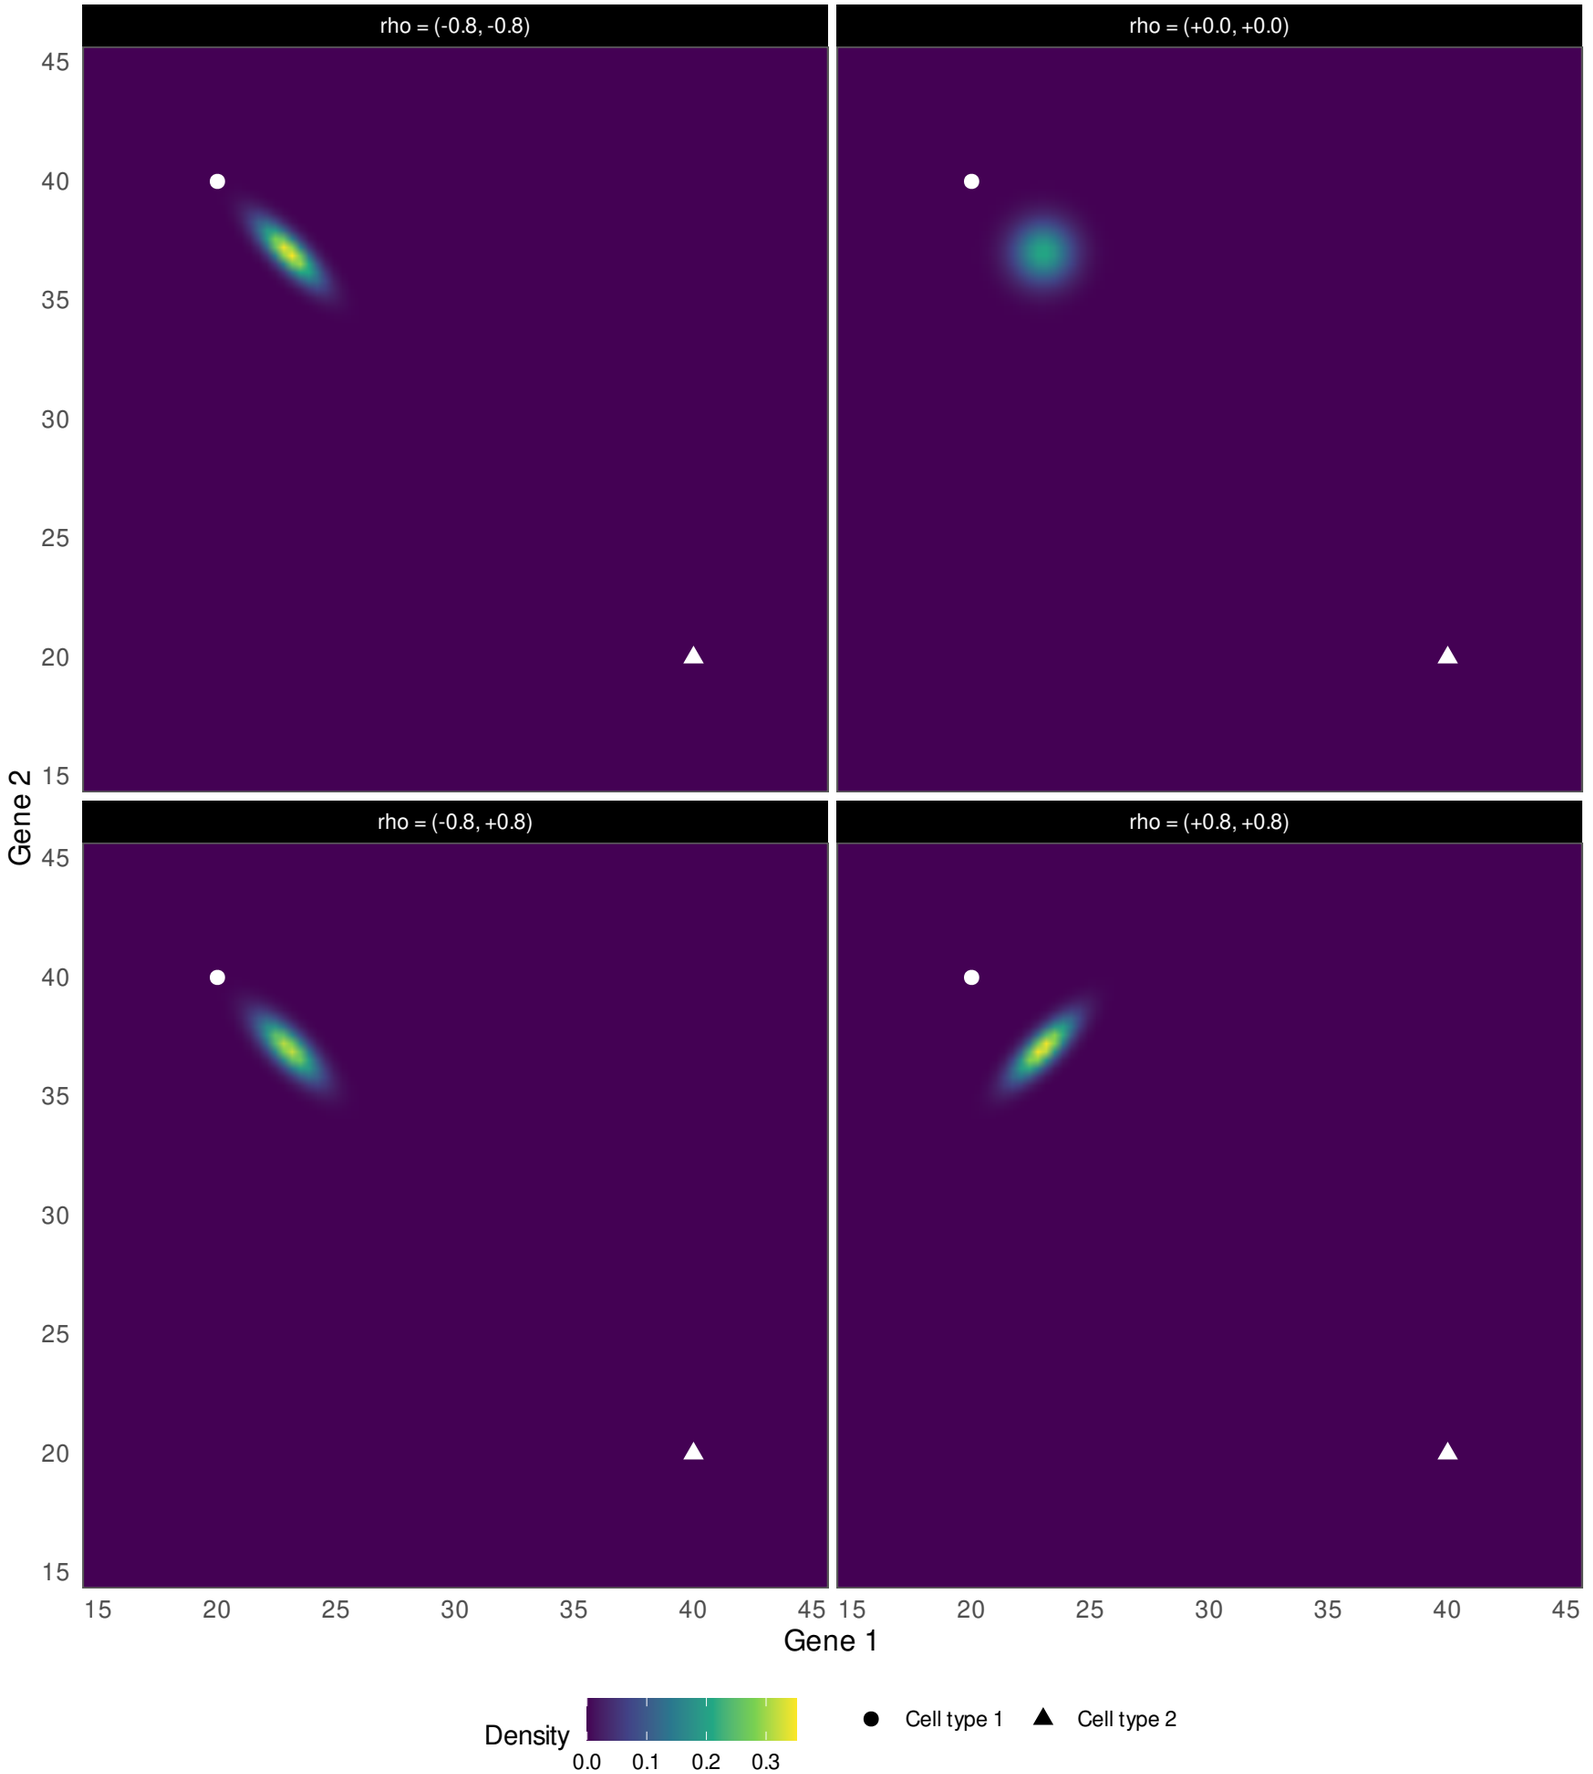

large centroid gap / homoscedastic / balanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

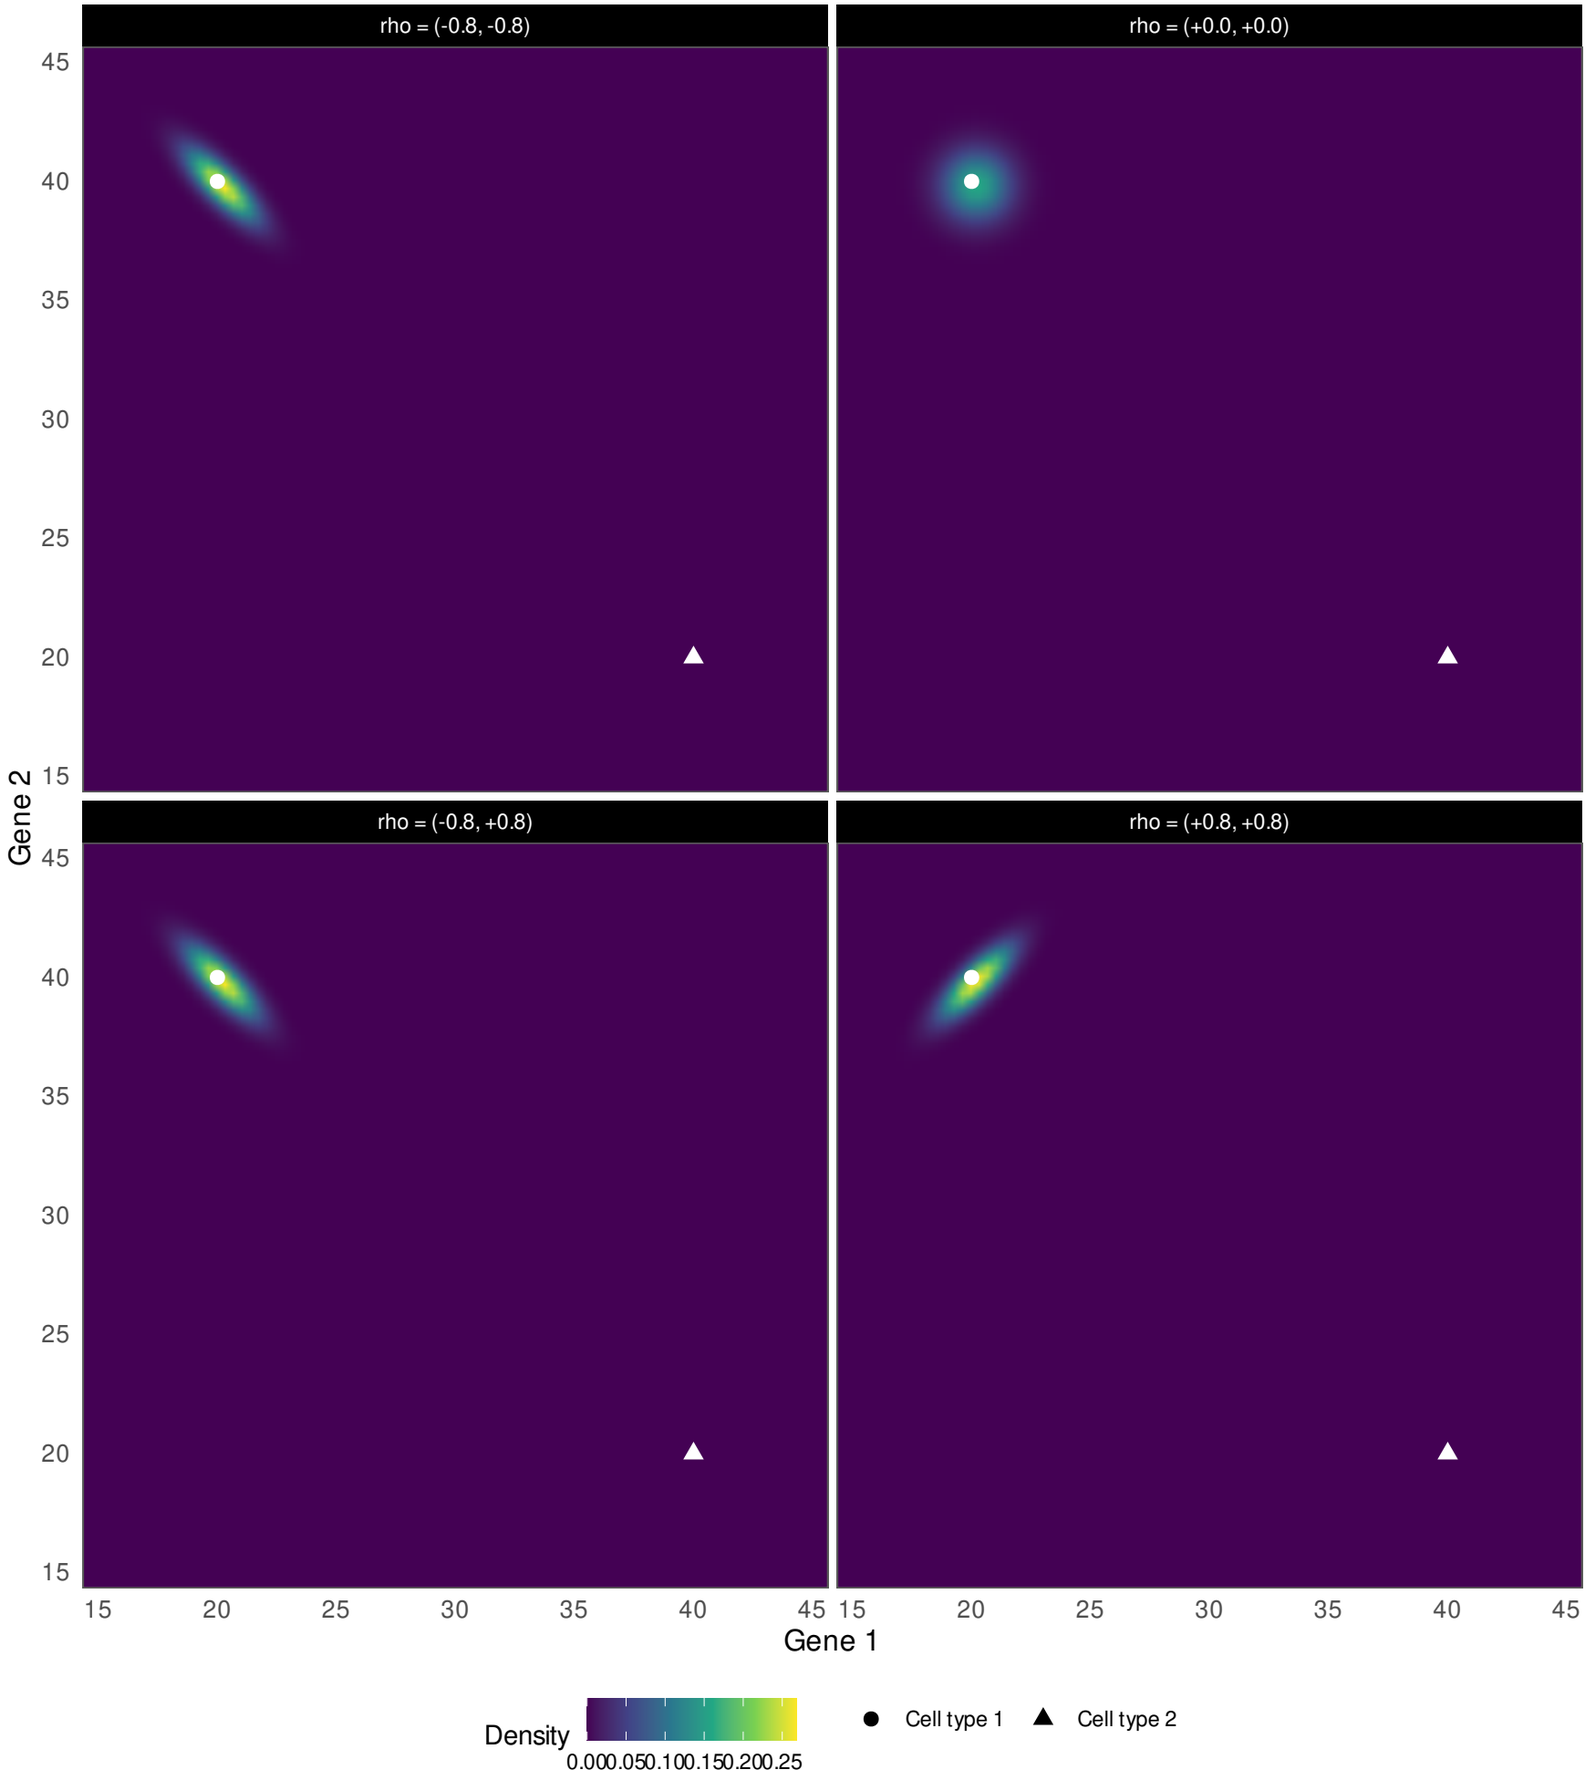

large centroid gap / homoscedastic / moderately unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

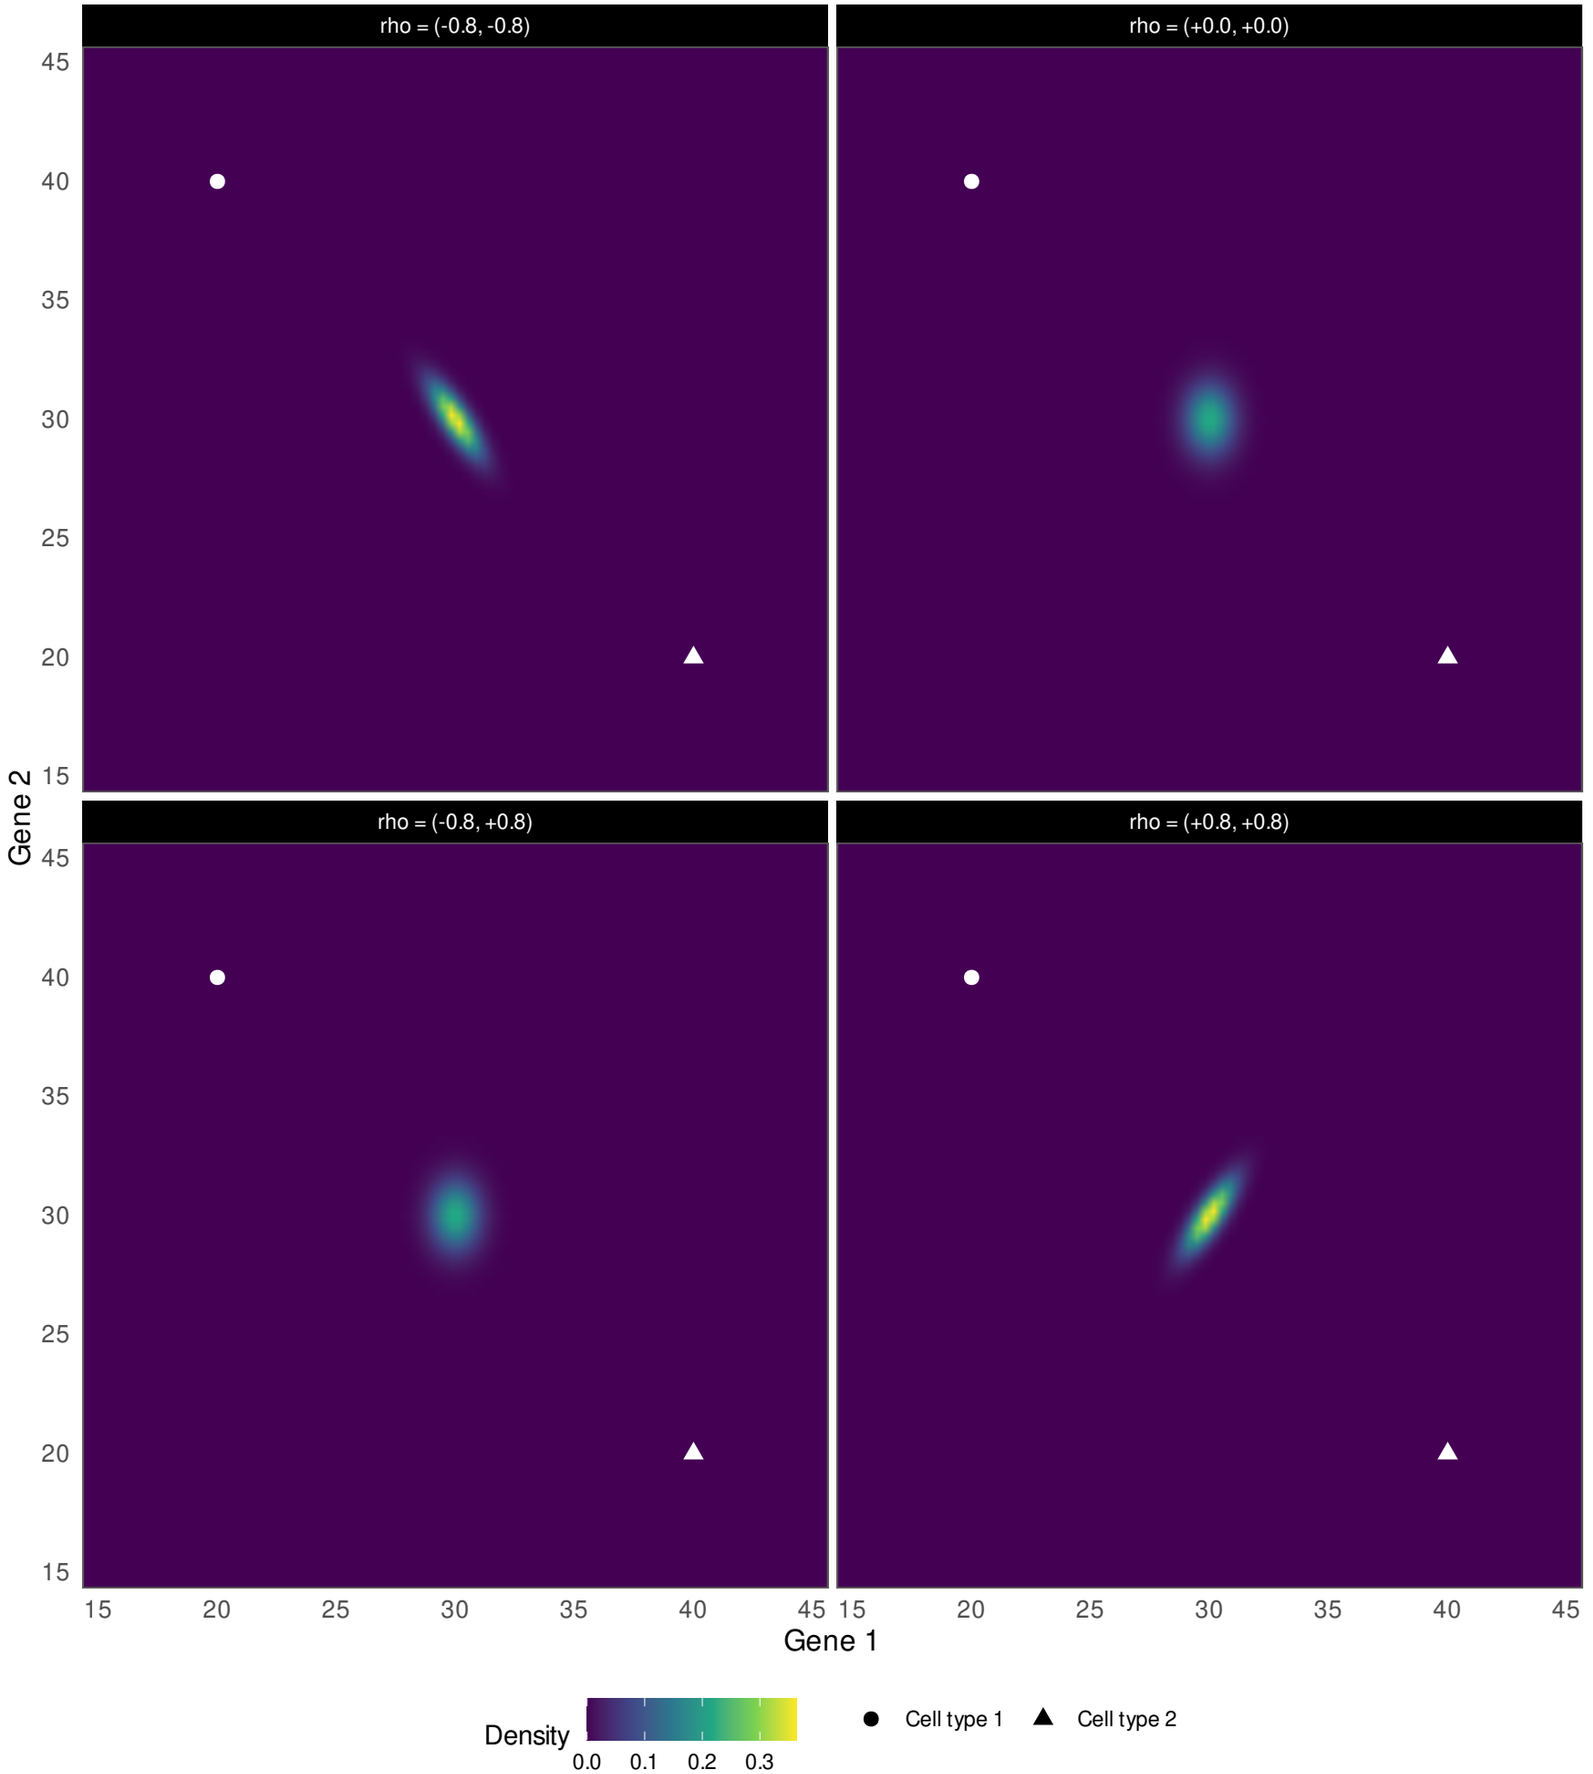

large centroid gap / homoscedastic / highly unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

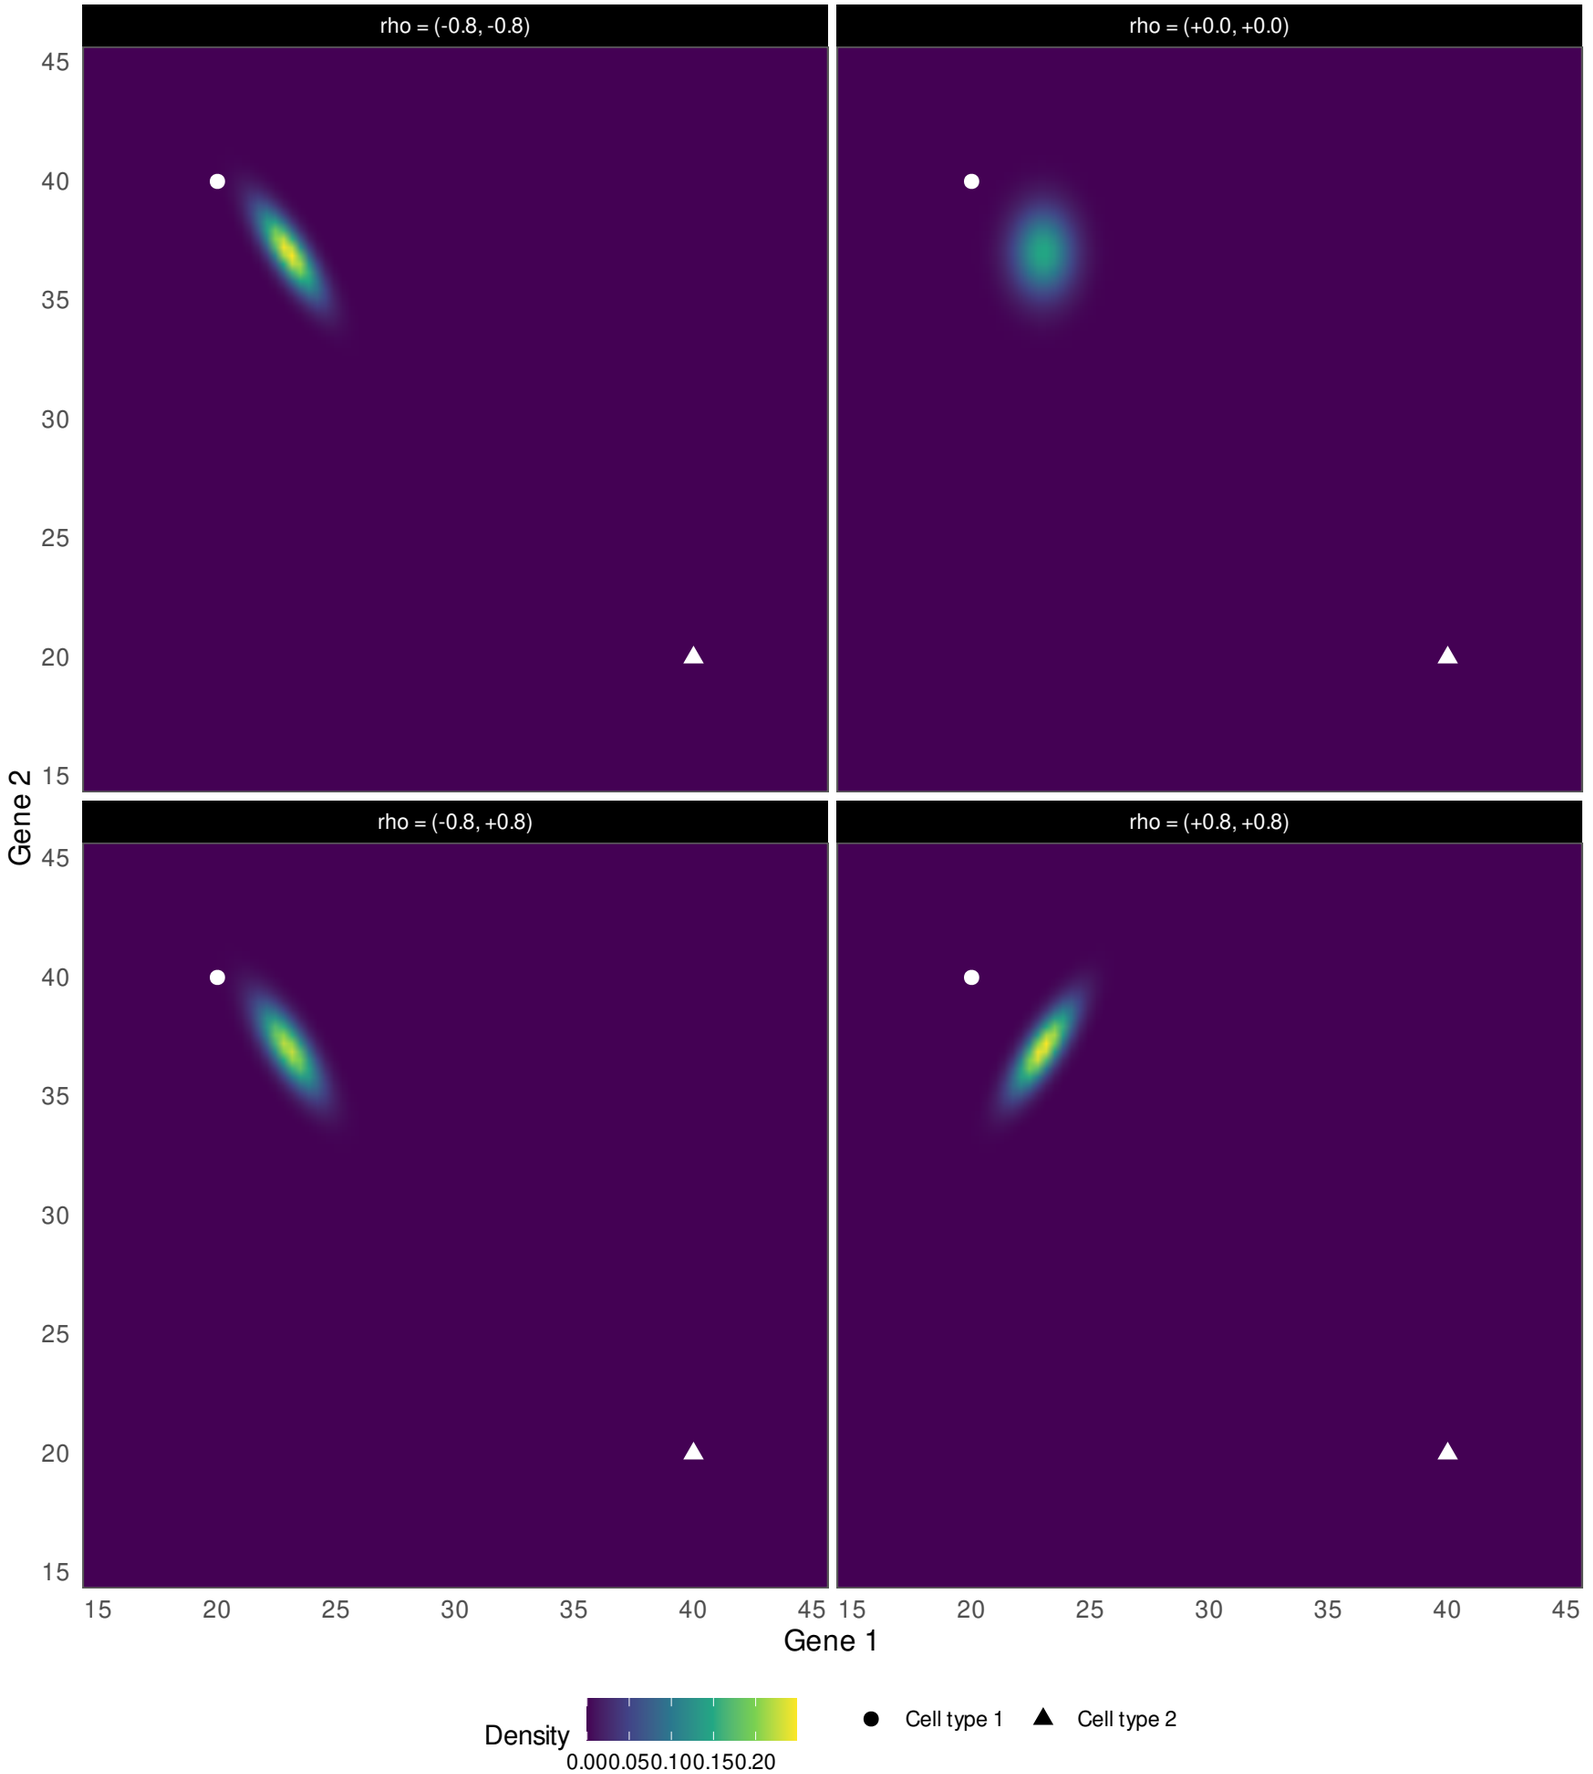

large centroid gap / heteroscedastic / balanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

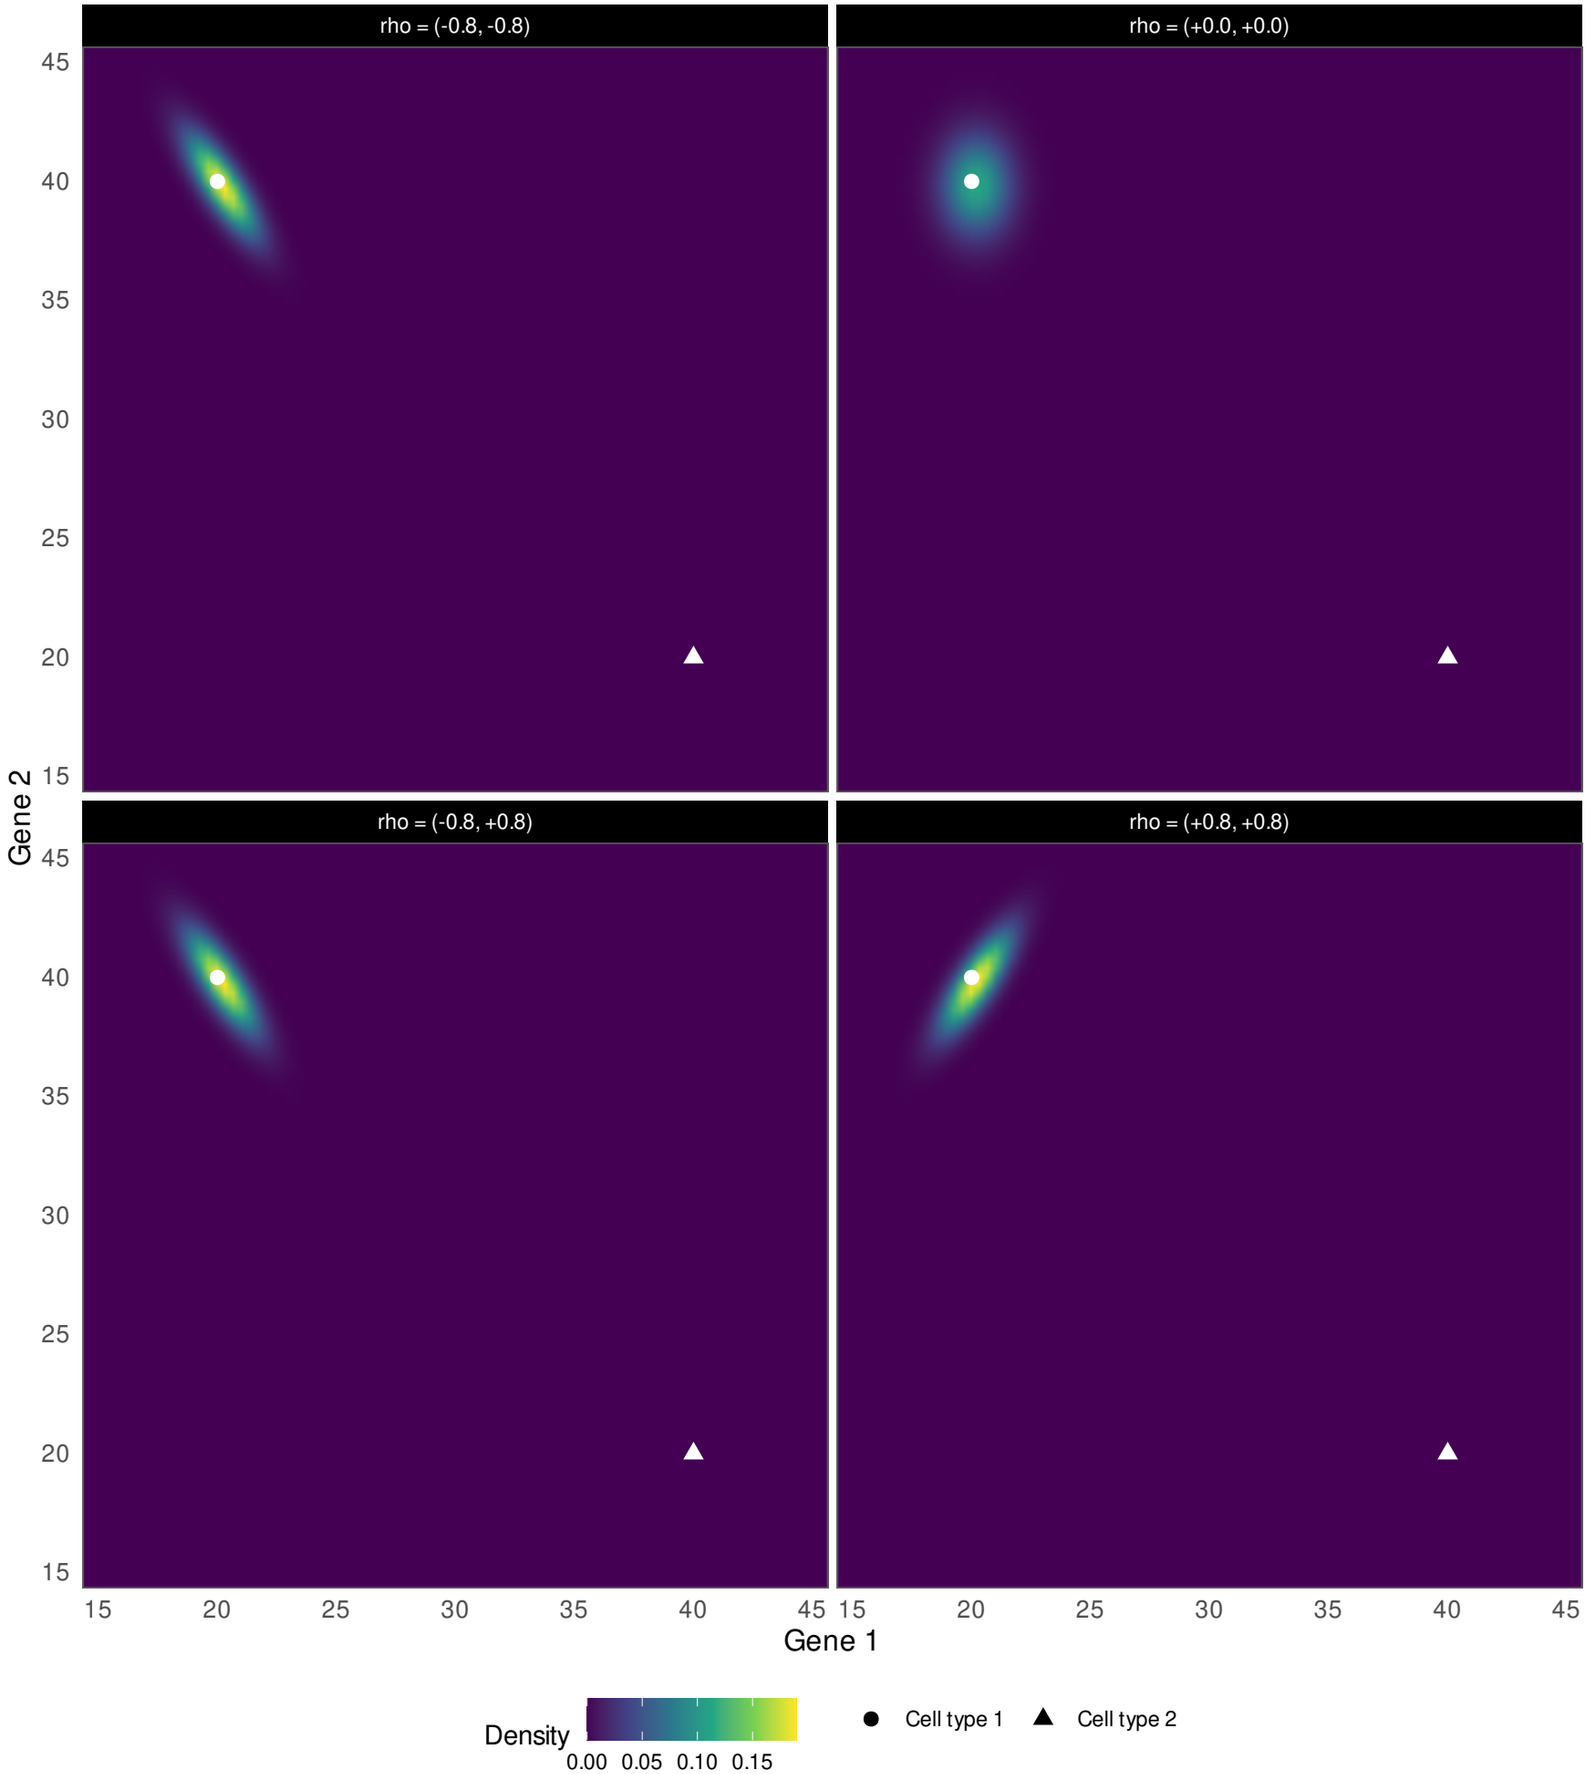

large centroid gap / heteroscedastic / moderately unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.

Bulk convolution N(mu p, sum_j p_j^2 Sigma_j)

large centroid gap / heteroscedastic / highly unbalanced

Fill: exact density of the bulk law; points: centroids of the purified types. Same gene axes on every page.
