Convergence: theoretical success, theoretical and numerical failures

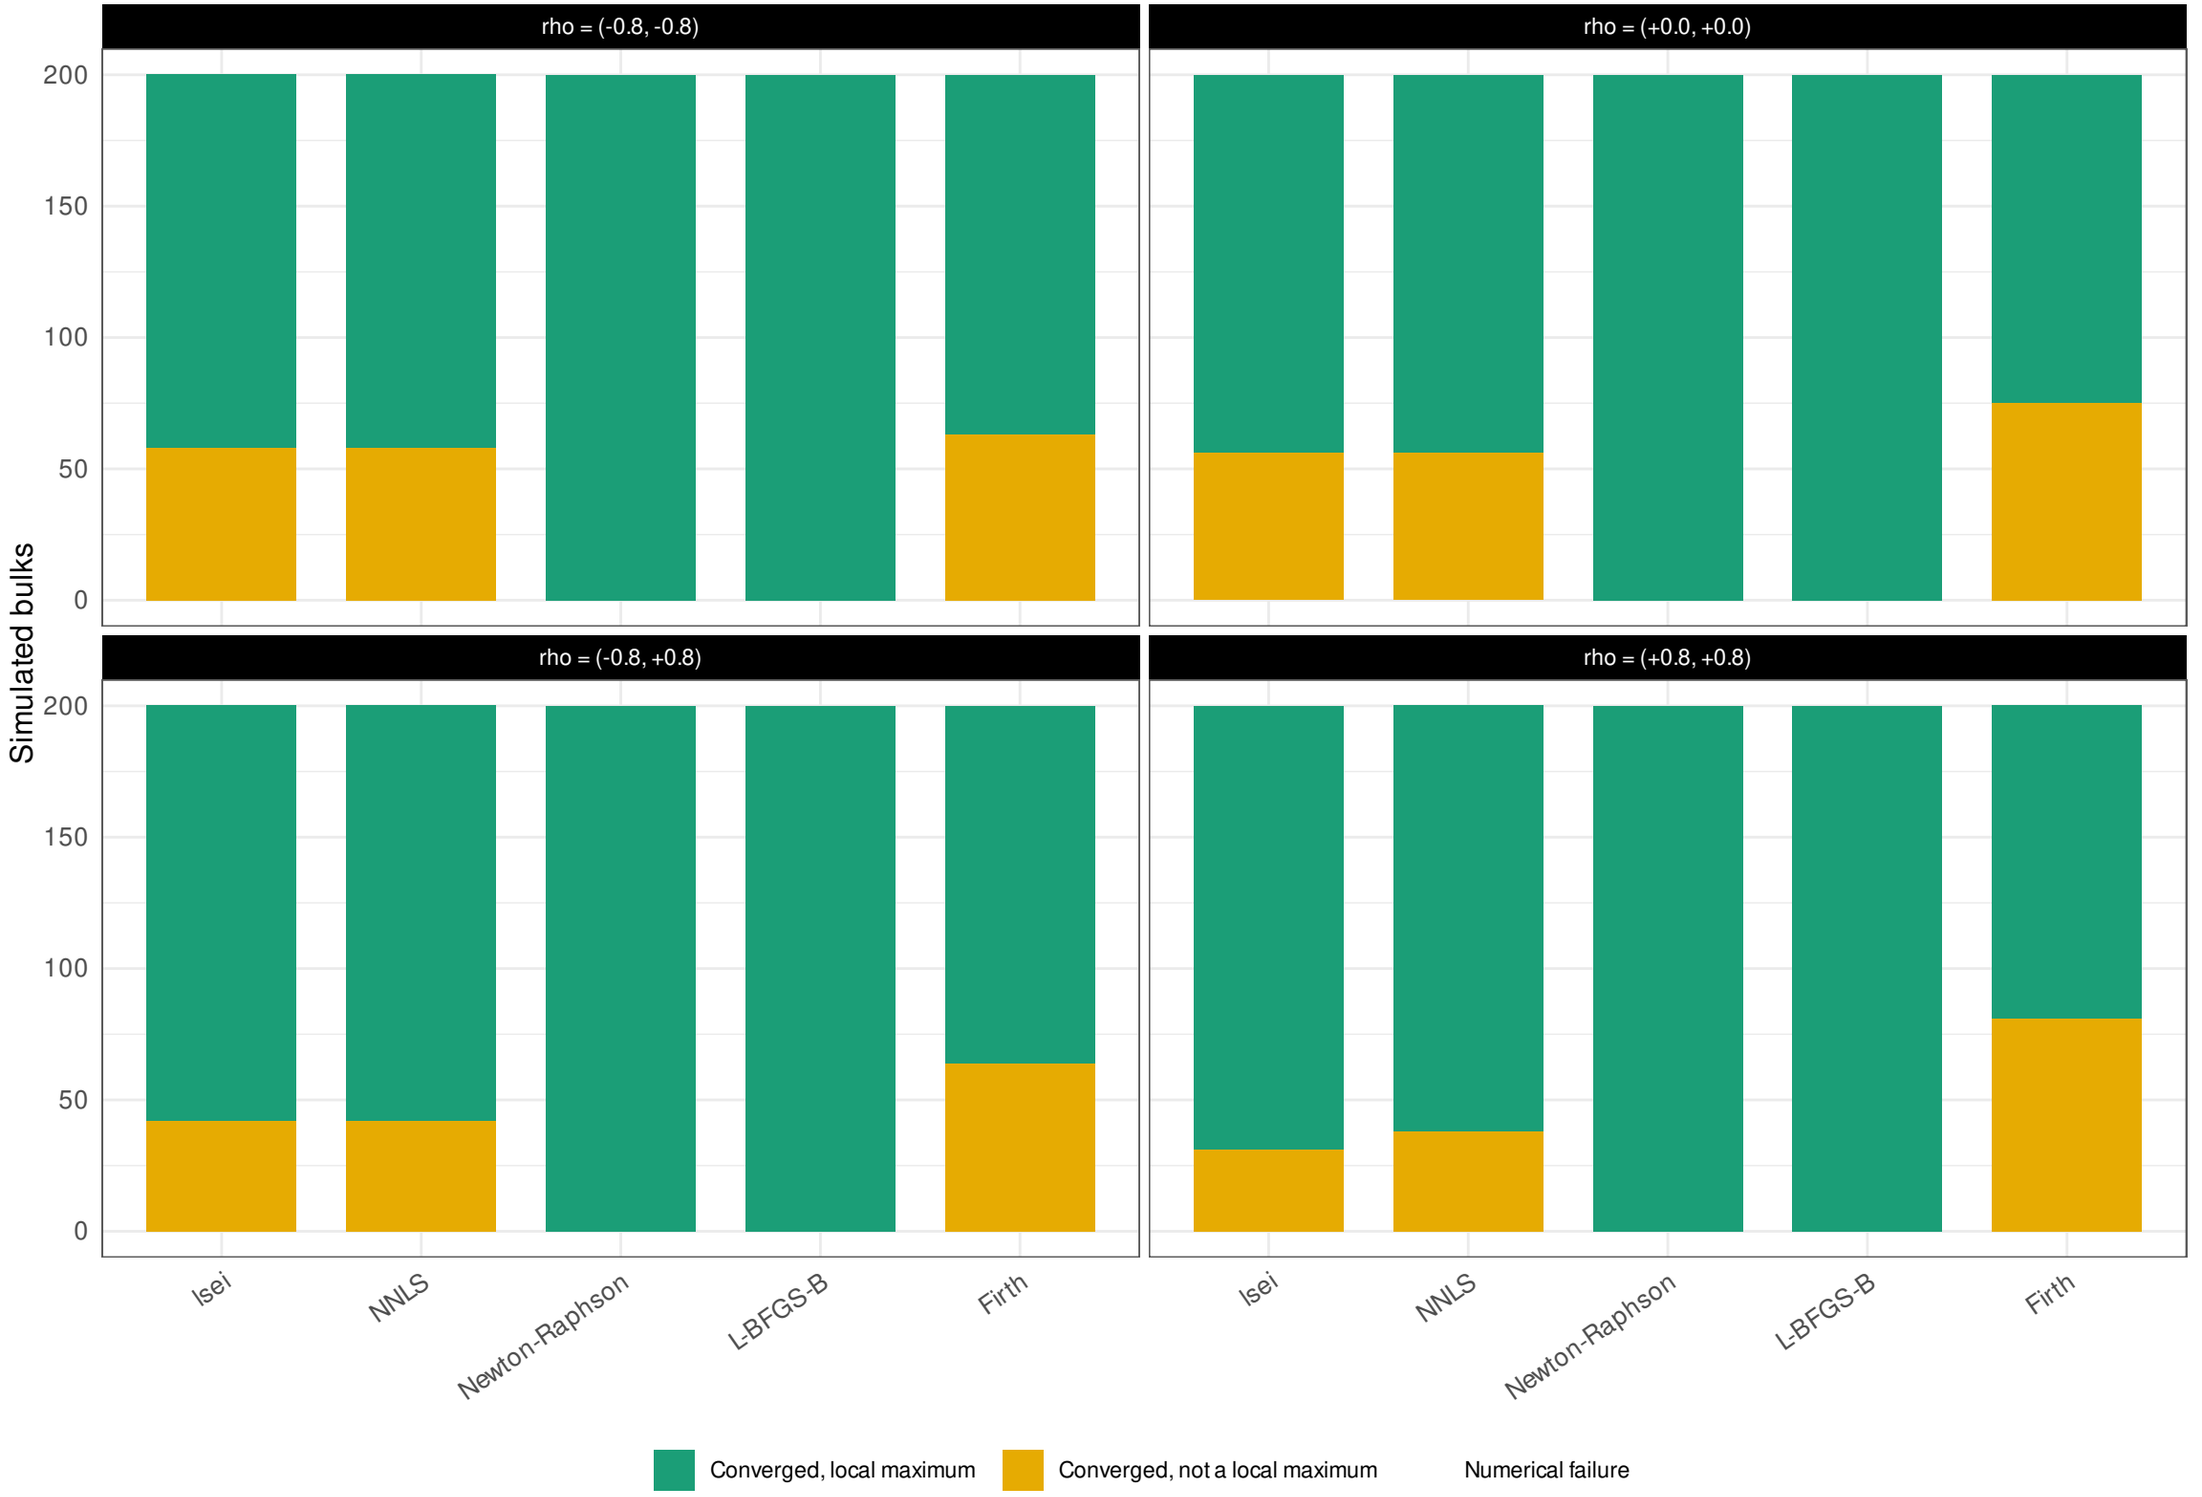

small centroid gap / homoscedastic / balanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

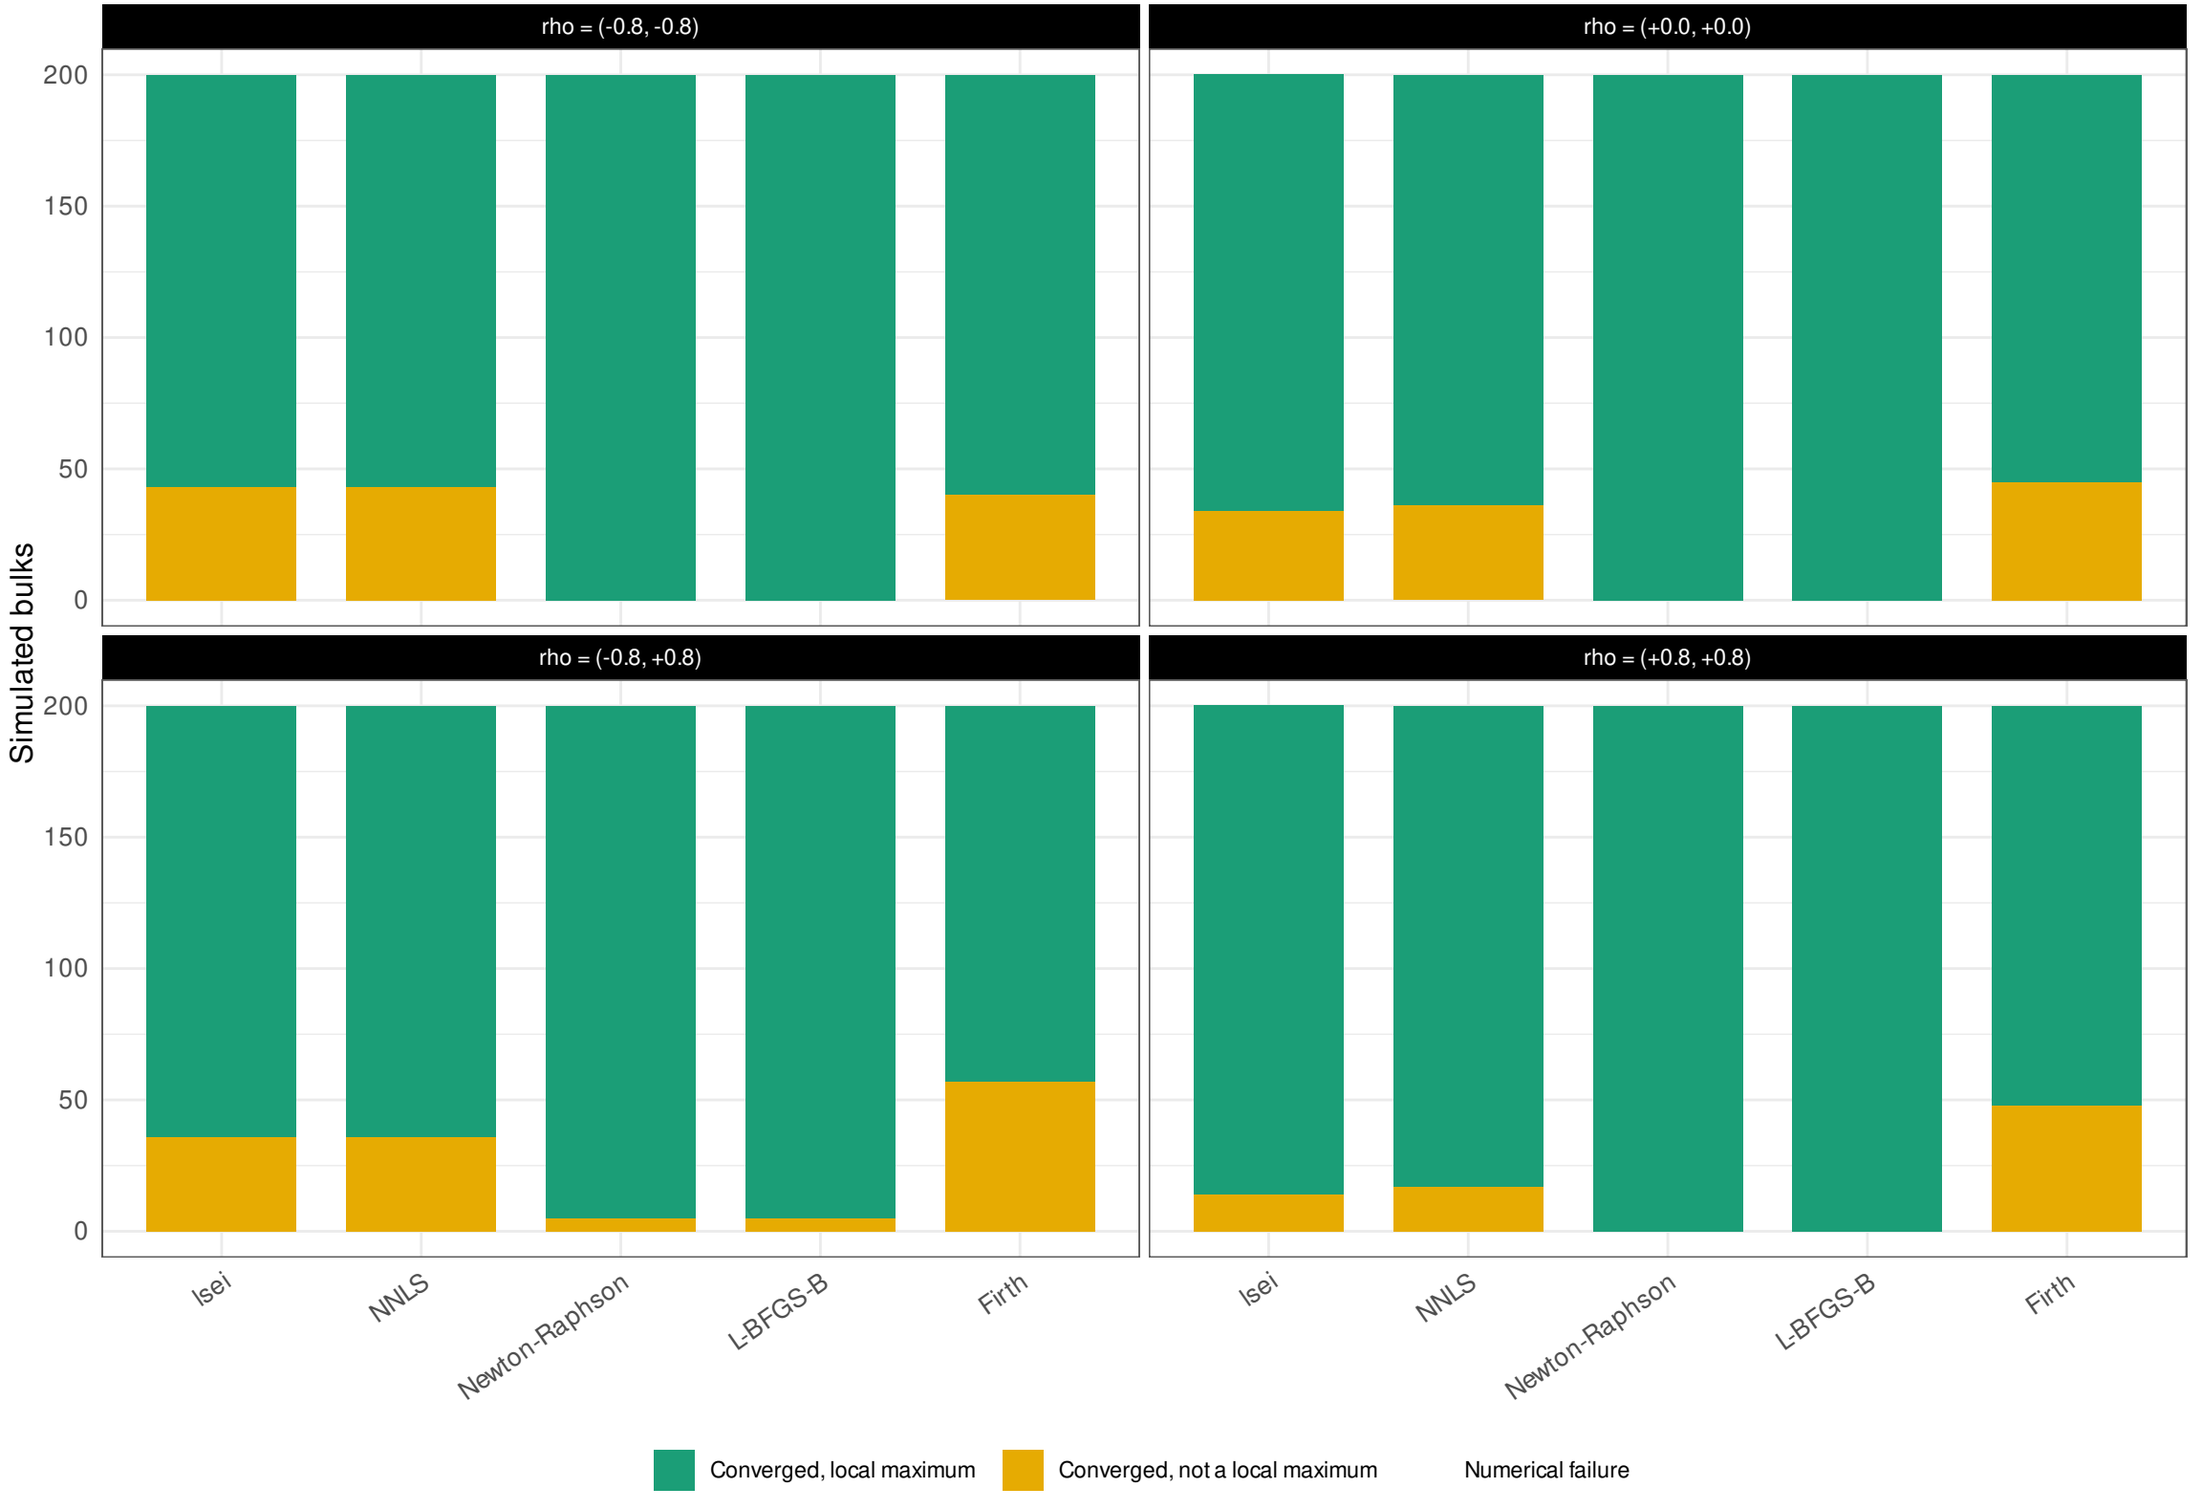

small centroid gap / homoscedastic / moderately unbalanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

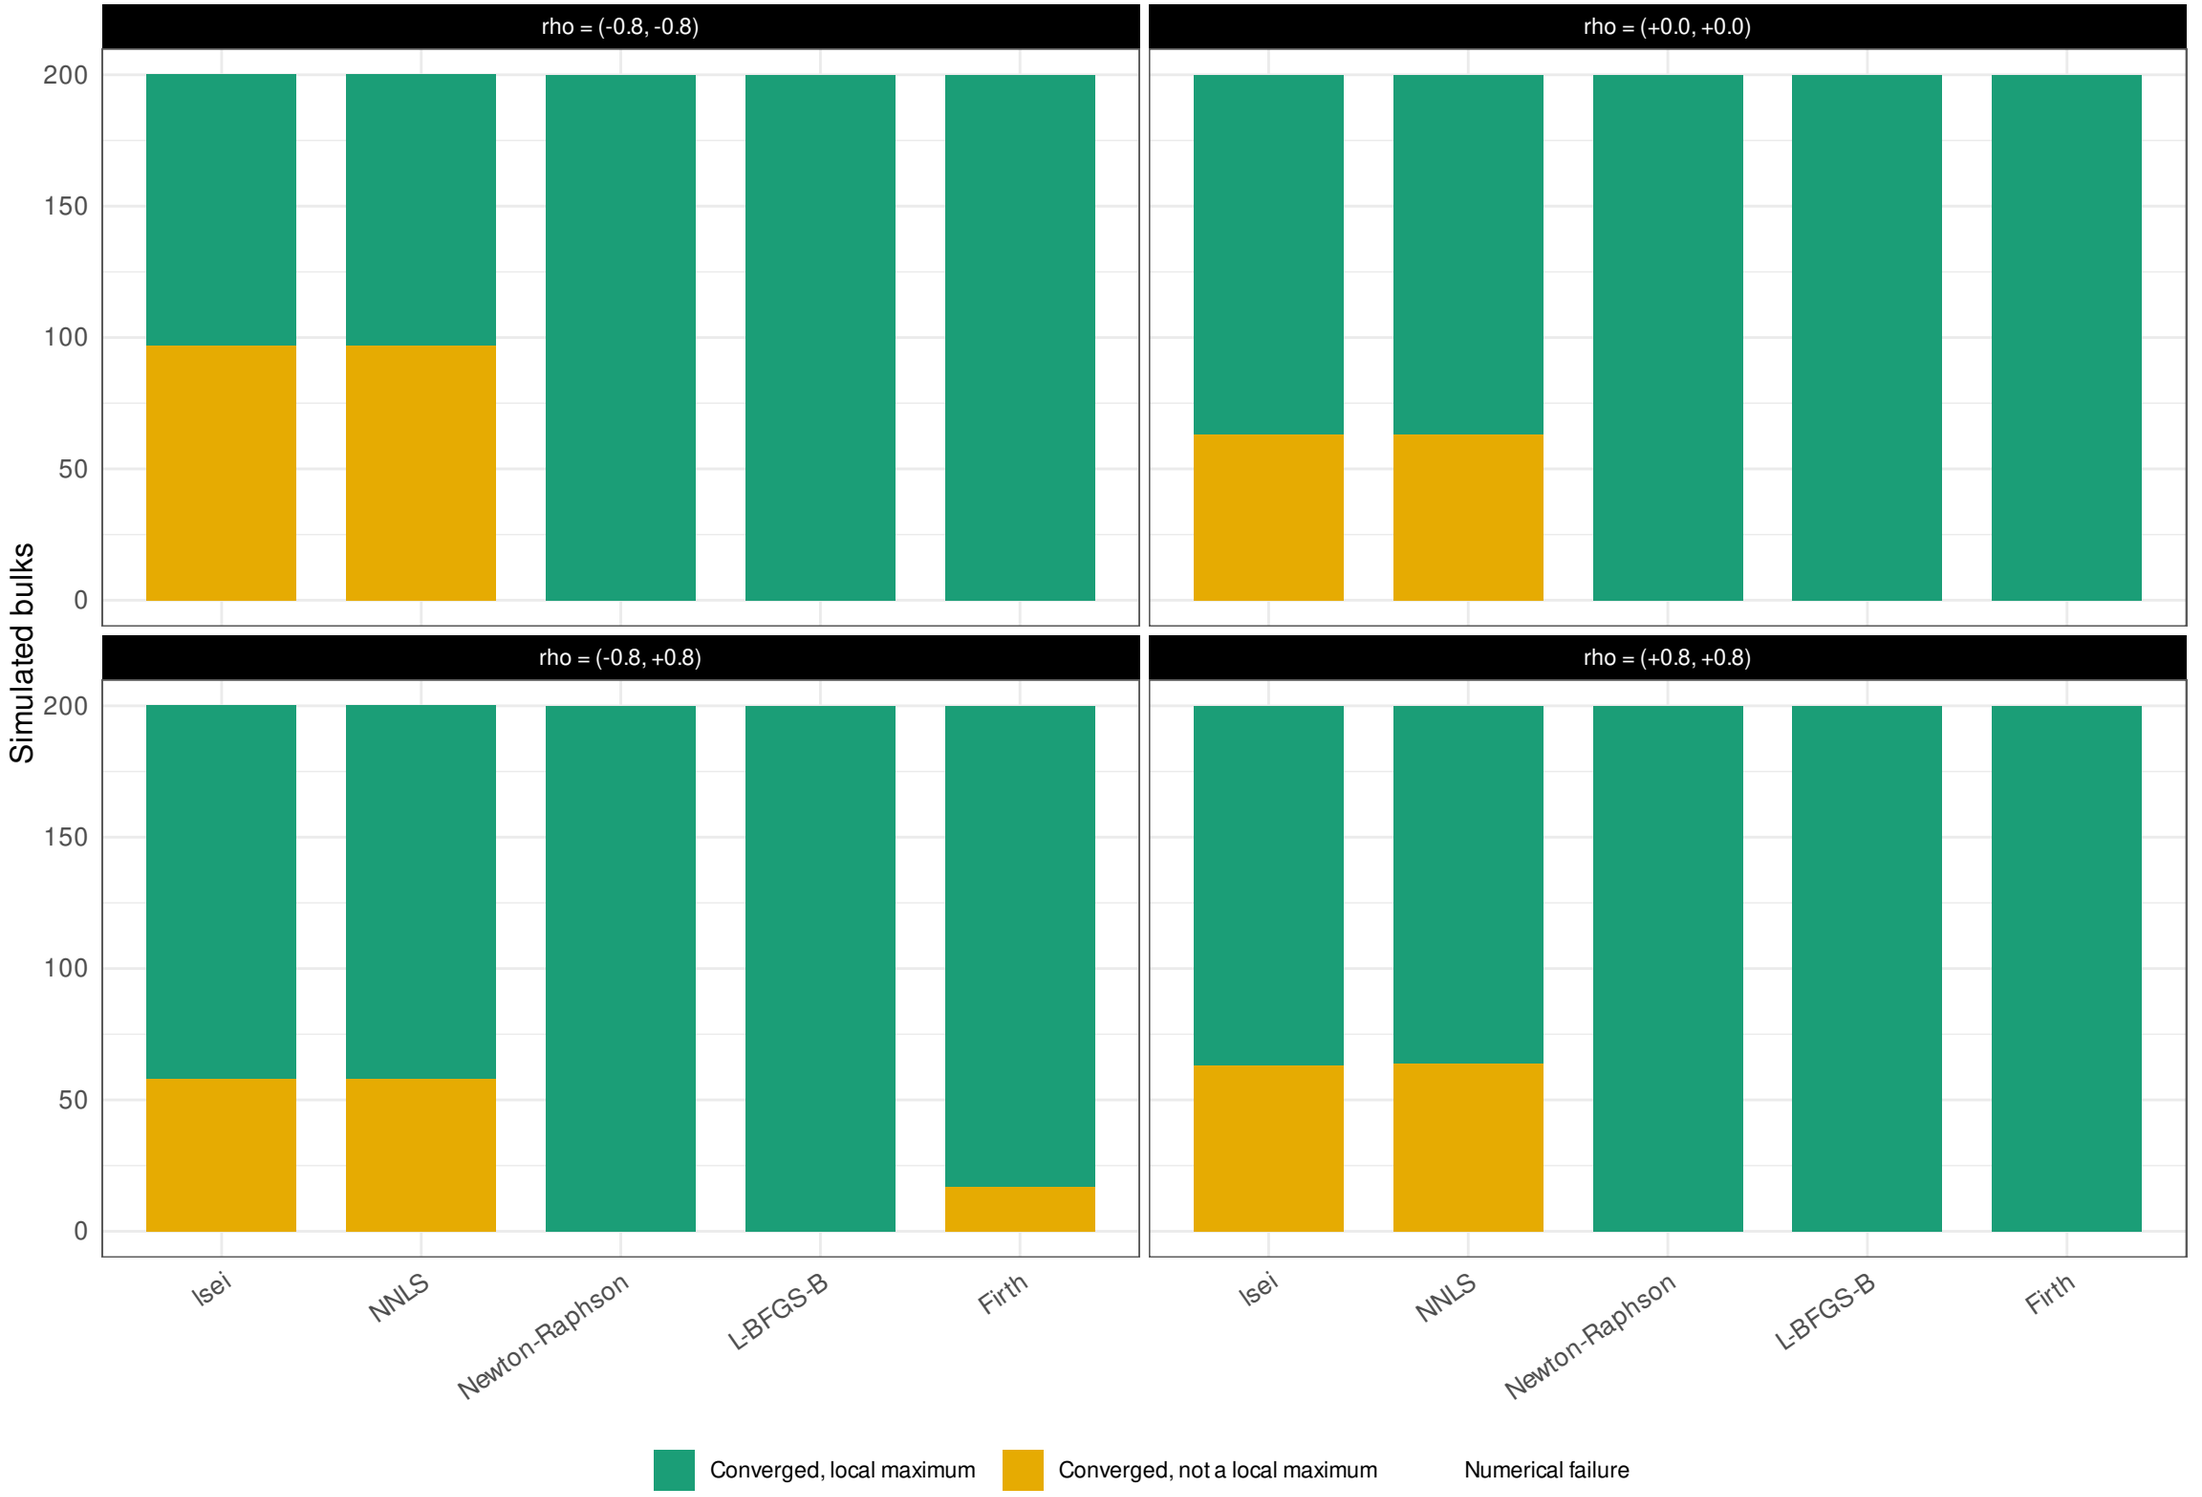

small centroid gap / homoscedastic / highly unbalanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

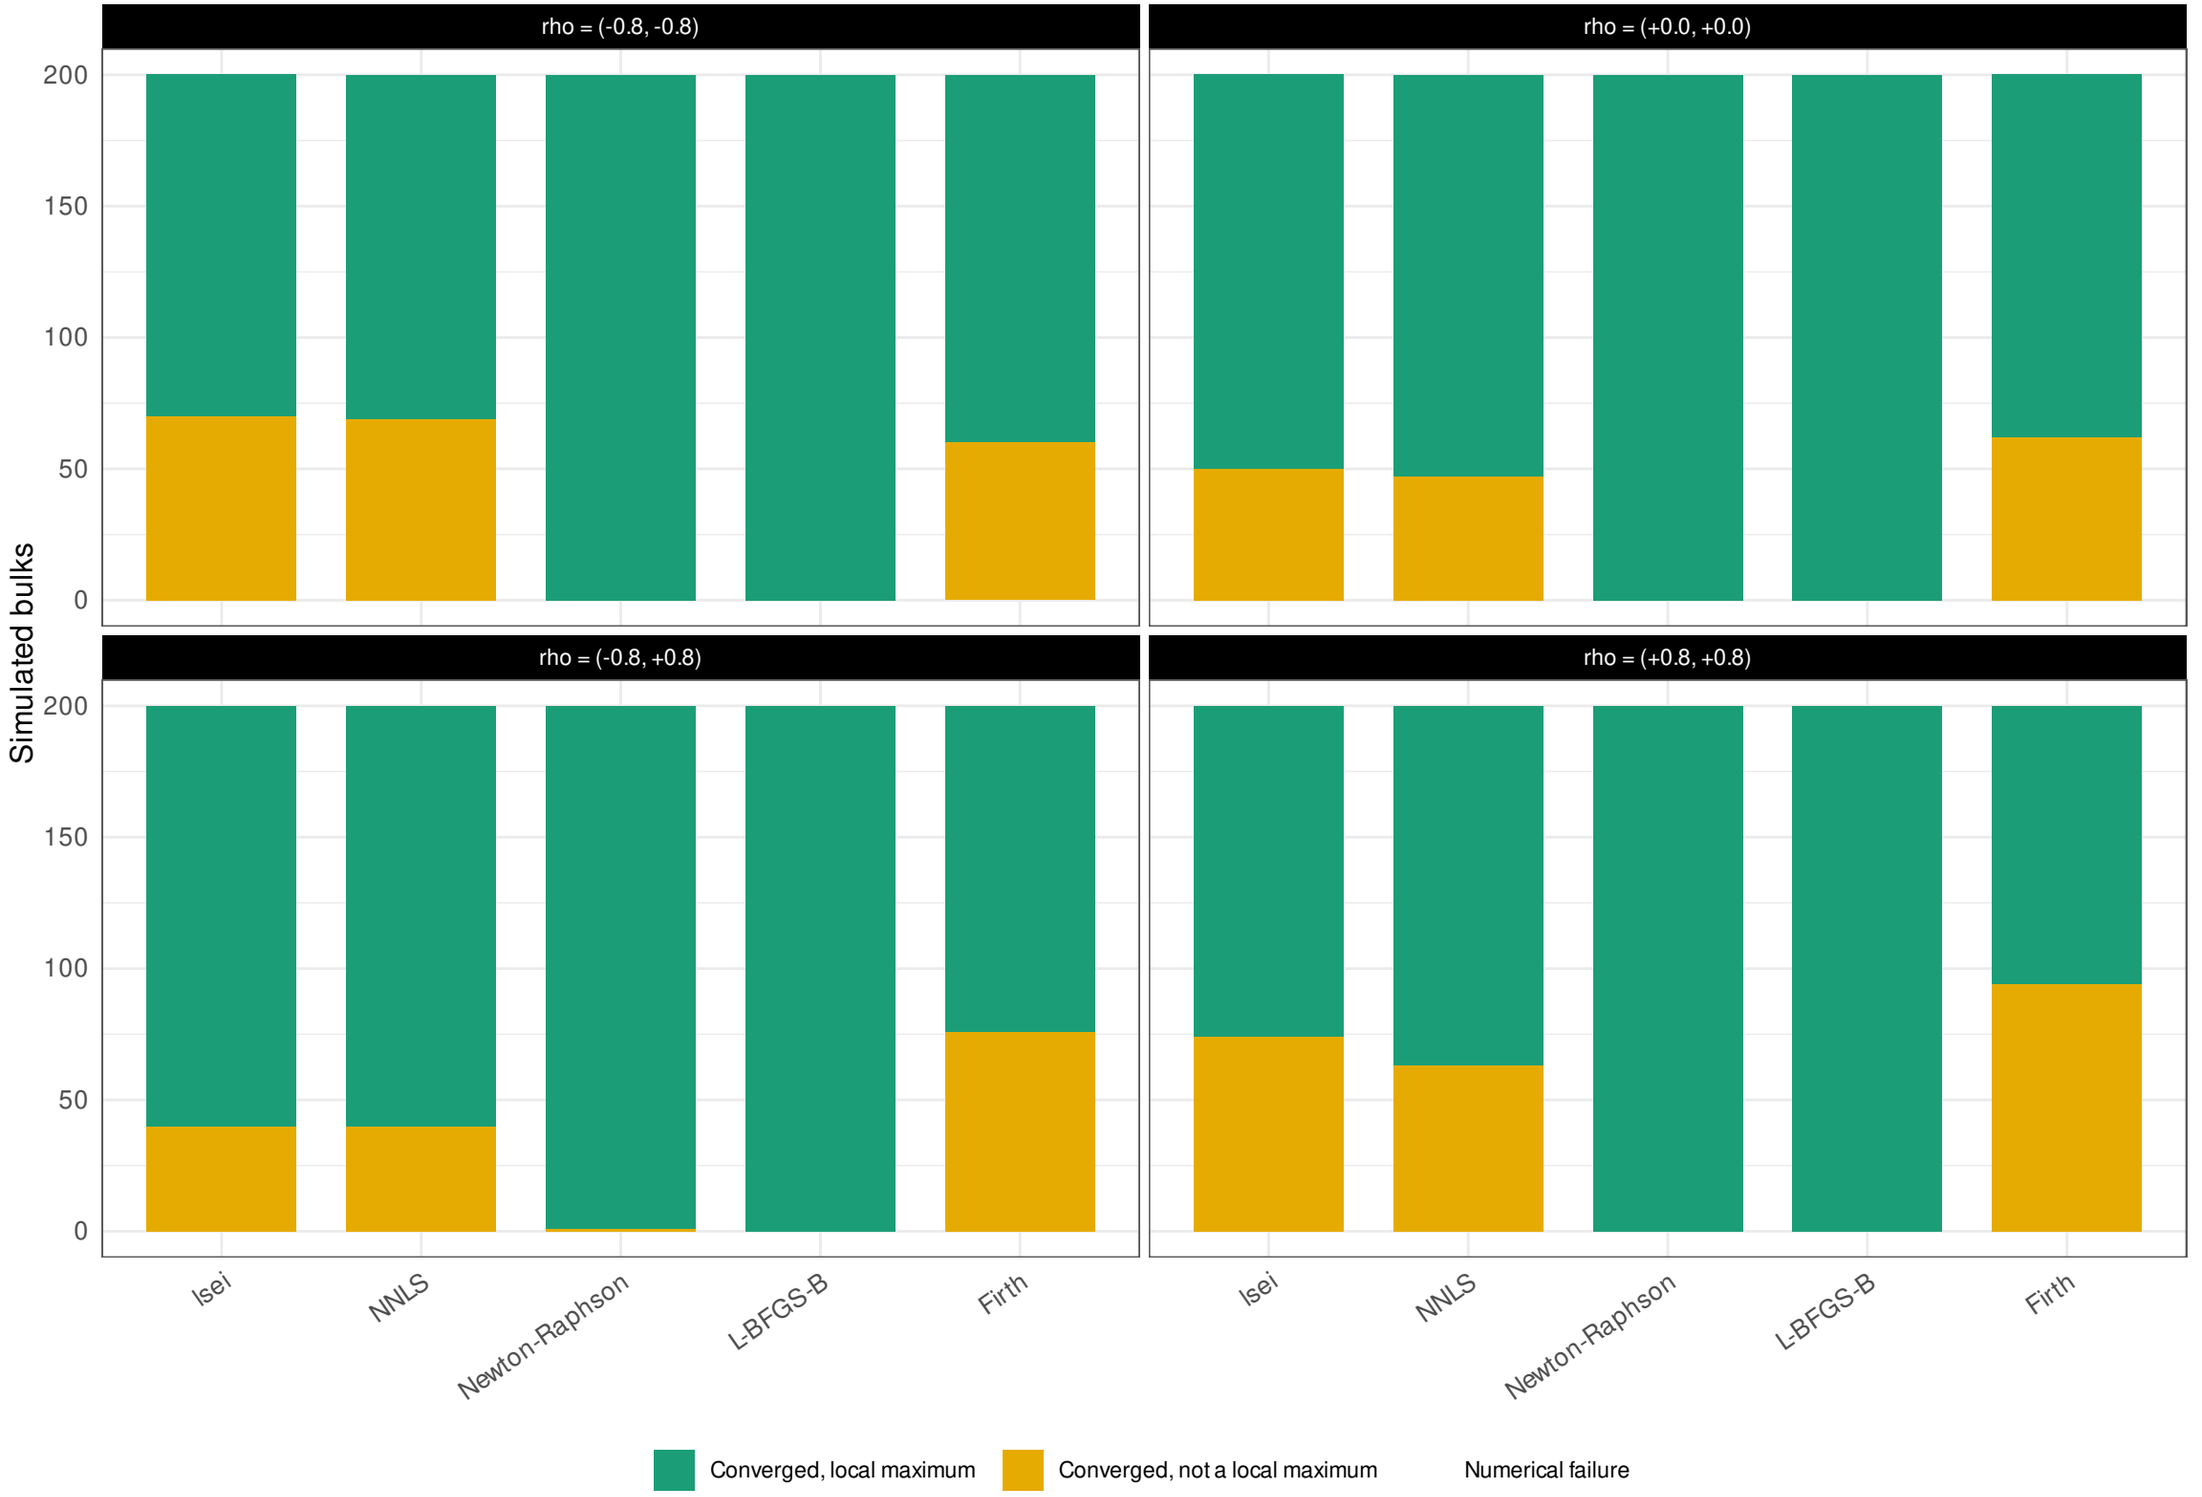

small centroid gap / heteroscedastic / balanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

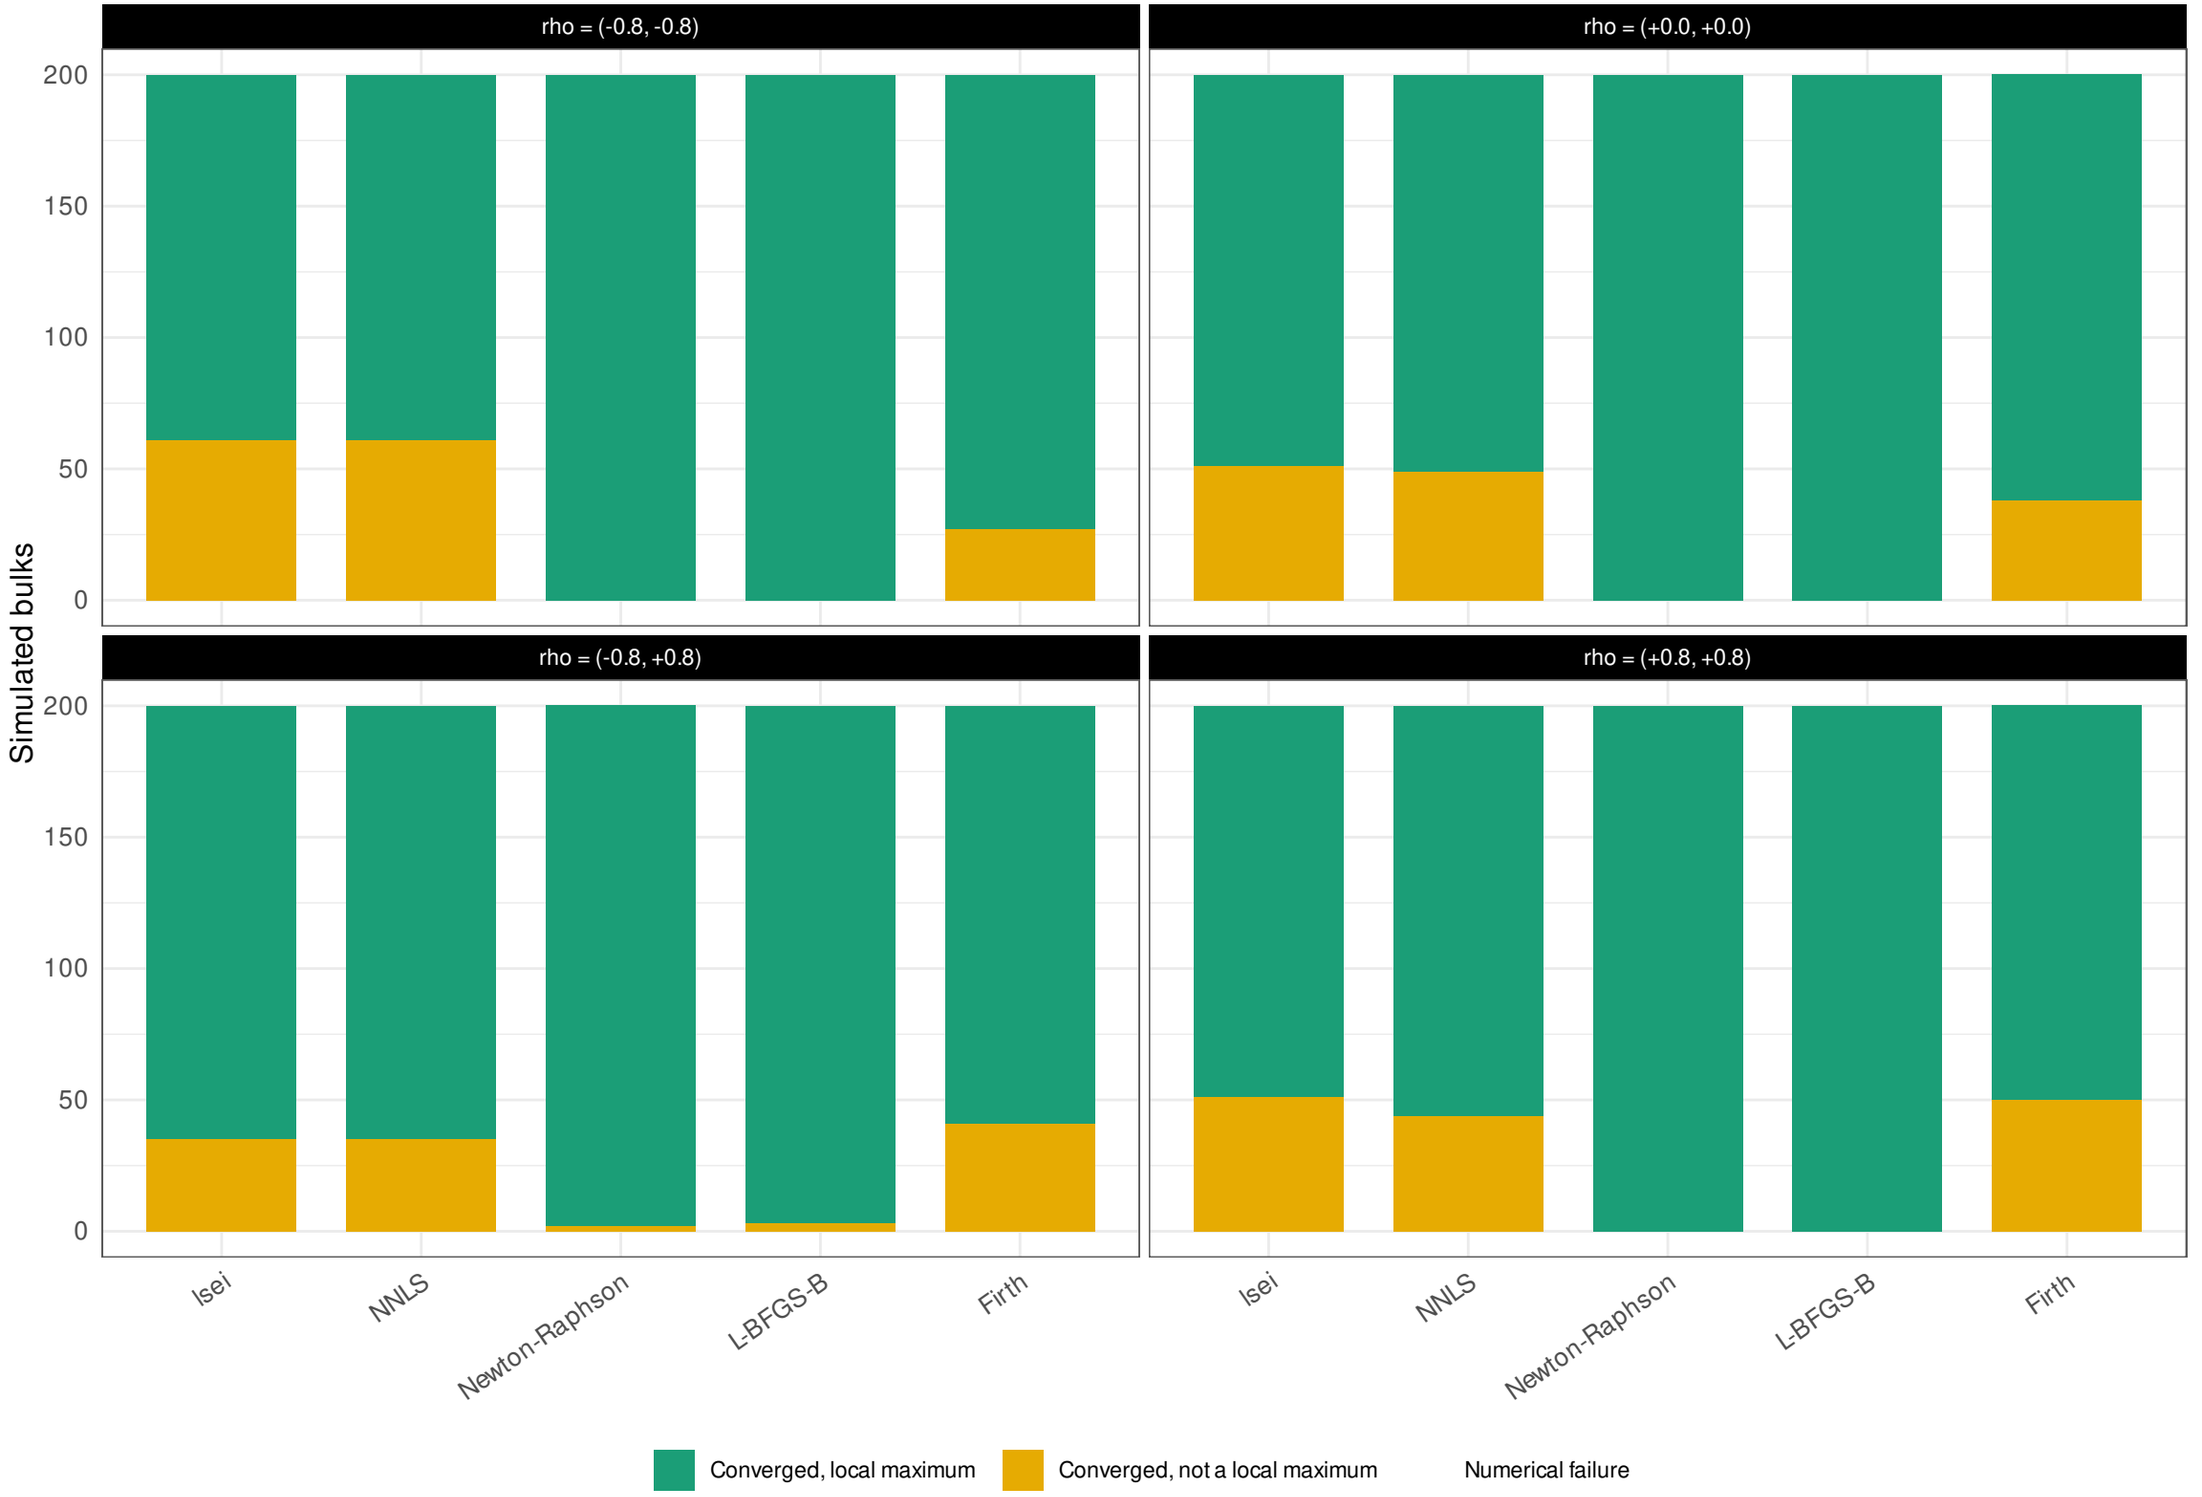

small centroid gap / heteroscedastic / moderately unbalanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

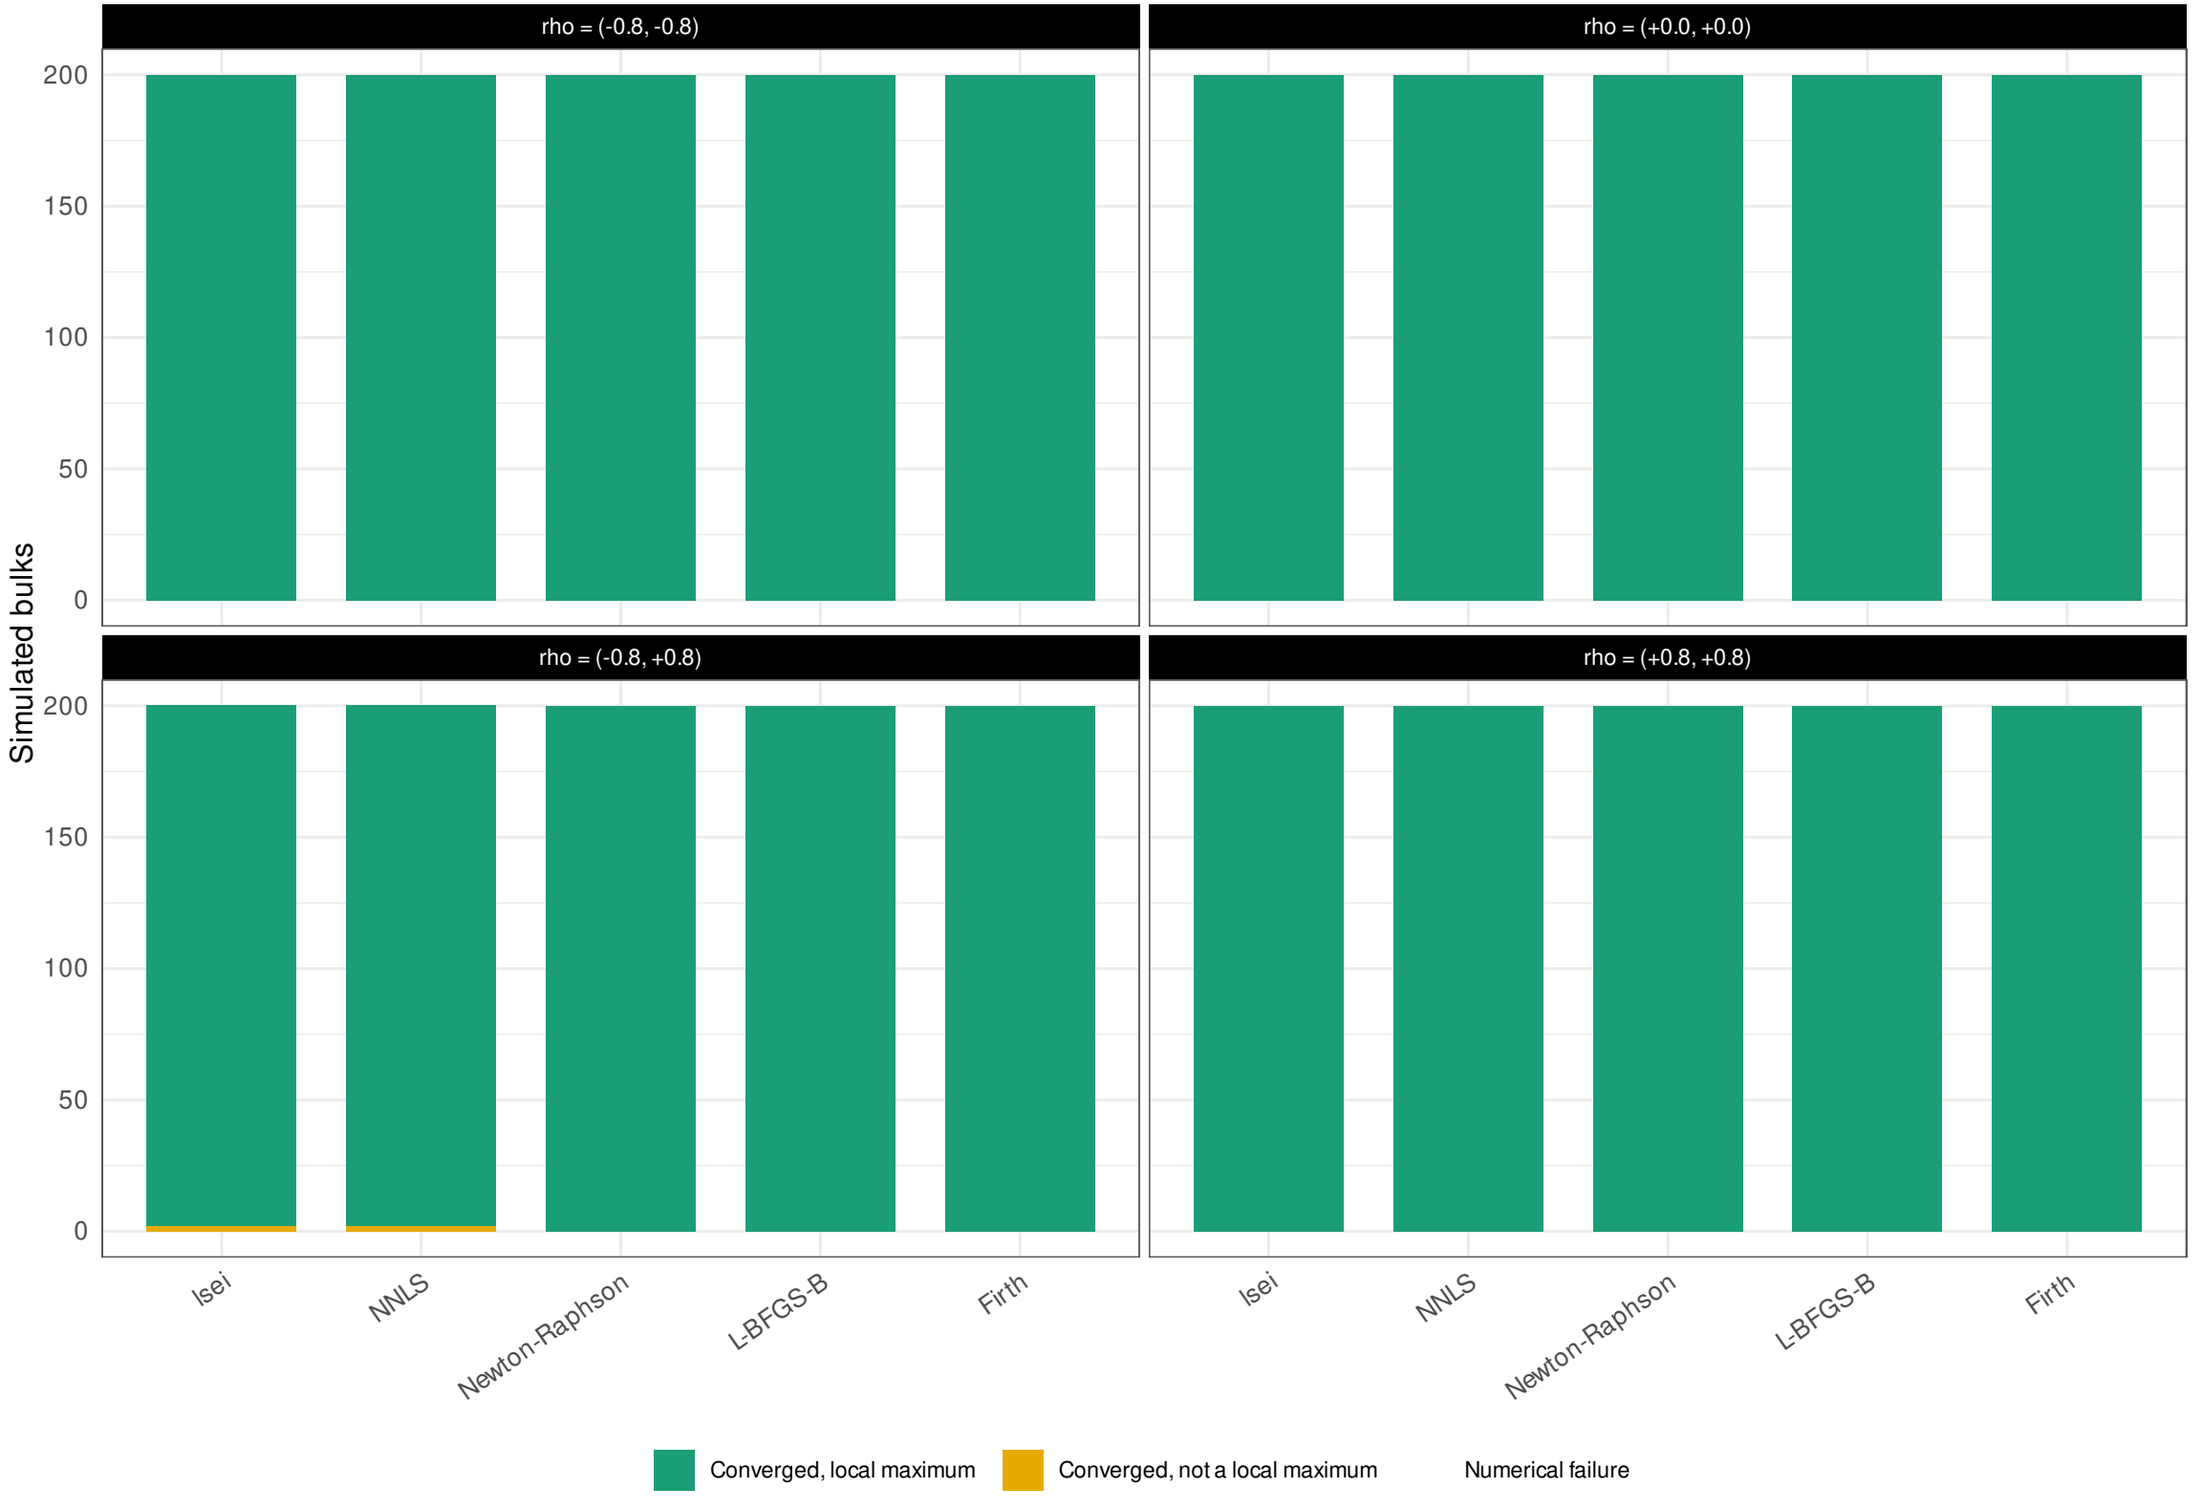

small centroid gap / heteroscedastic / highly unbalanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

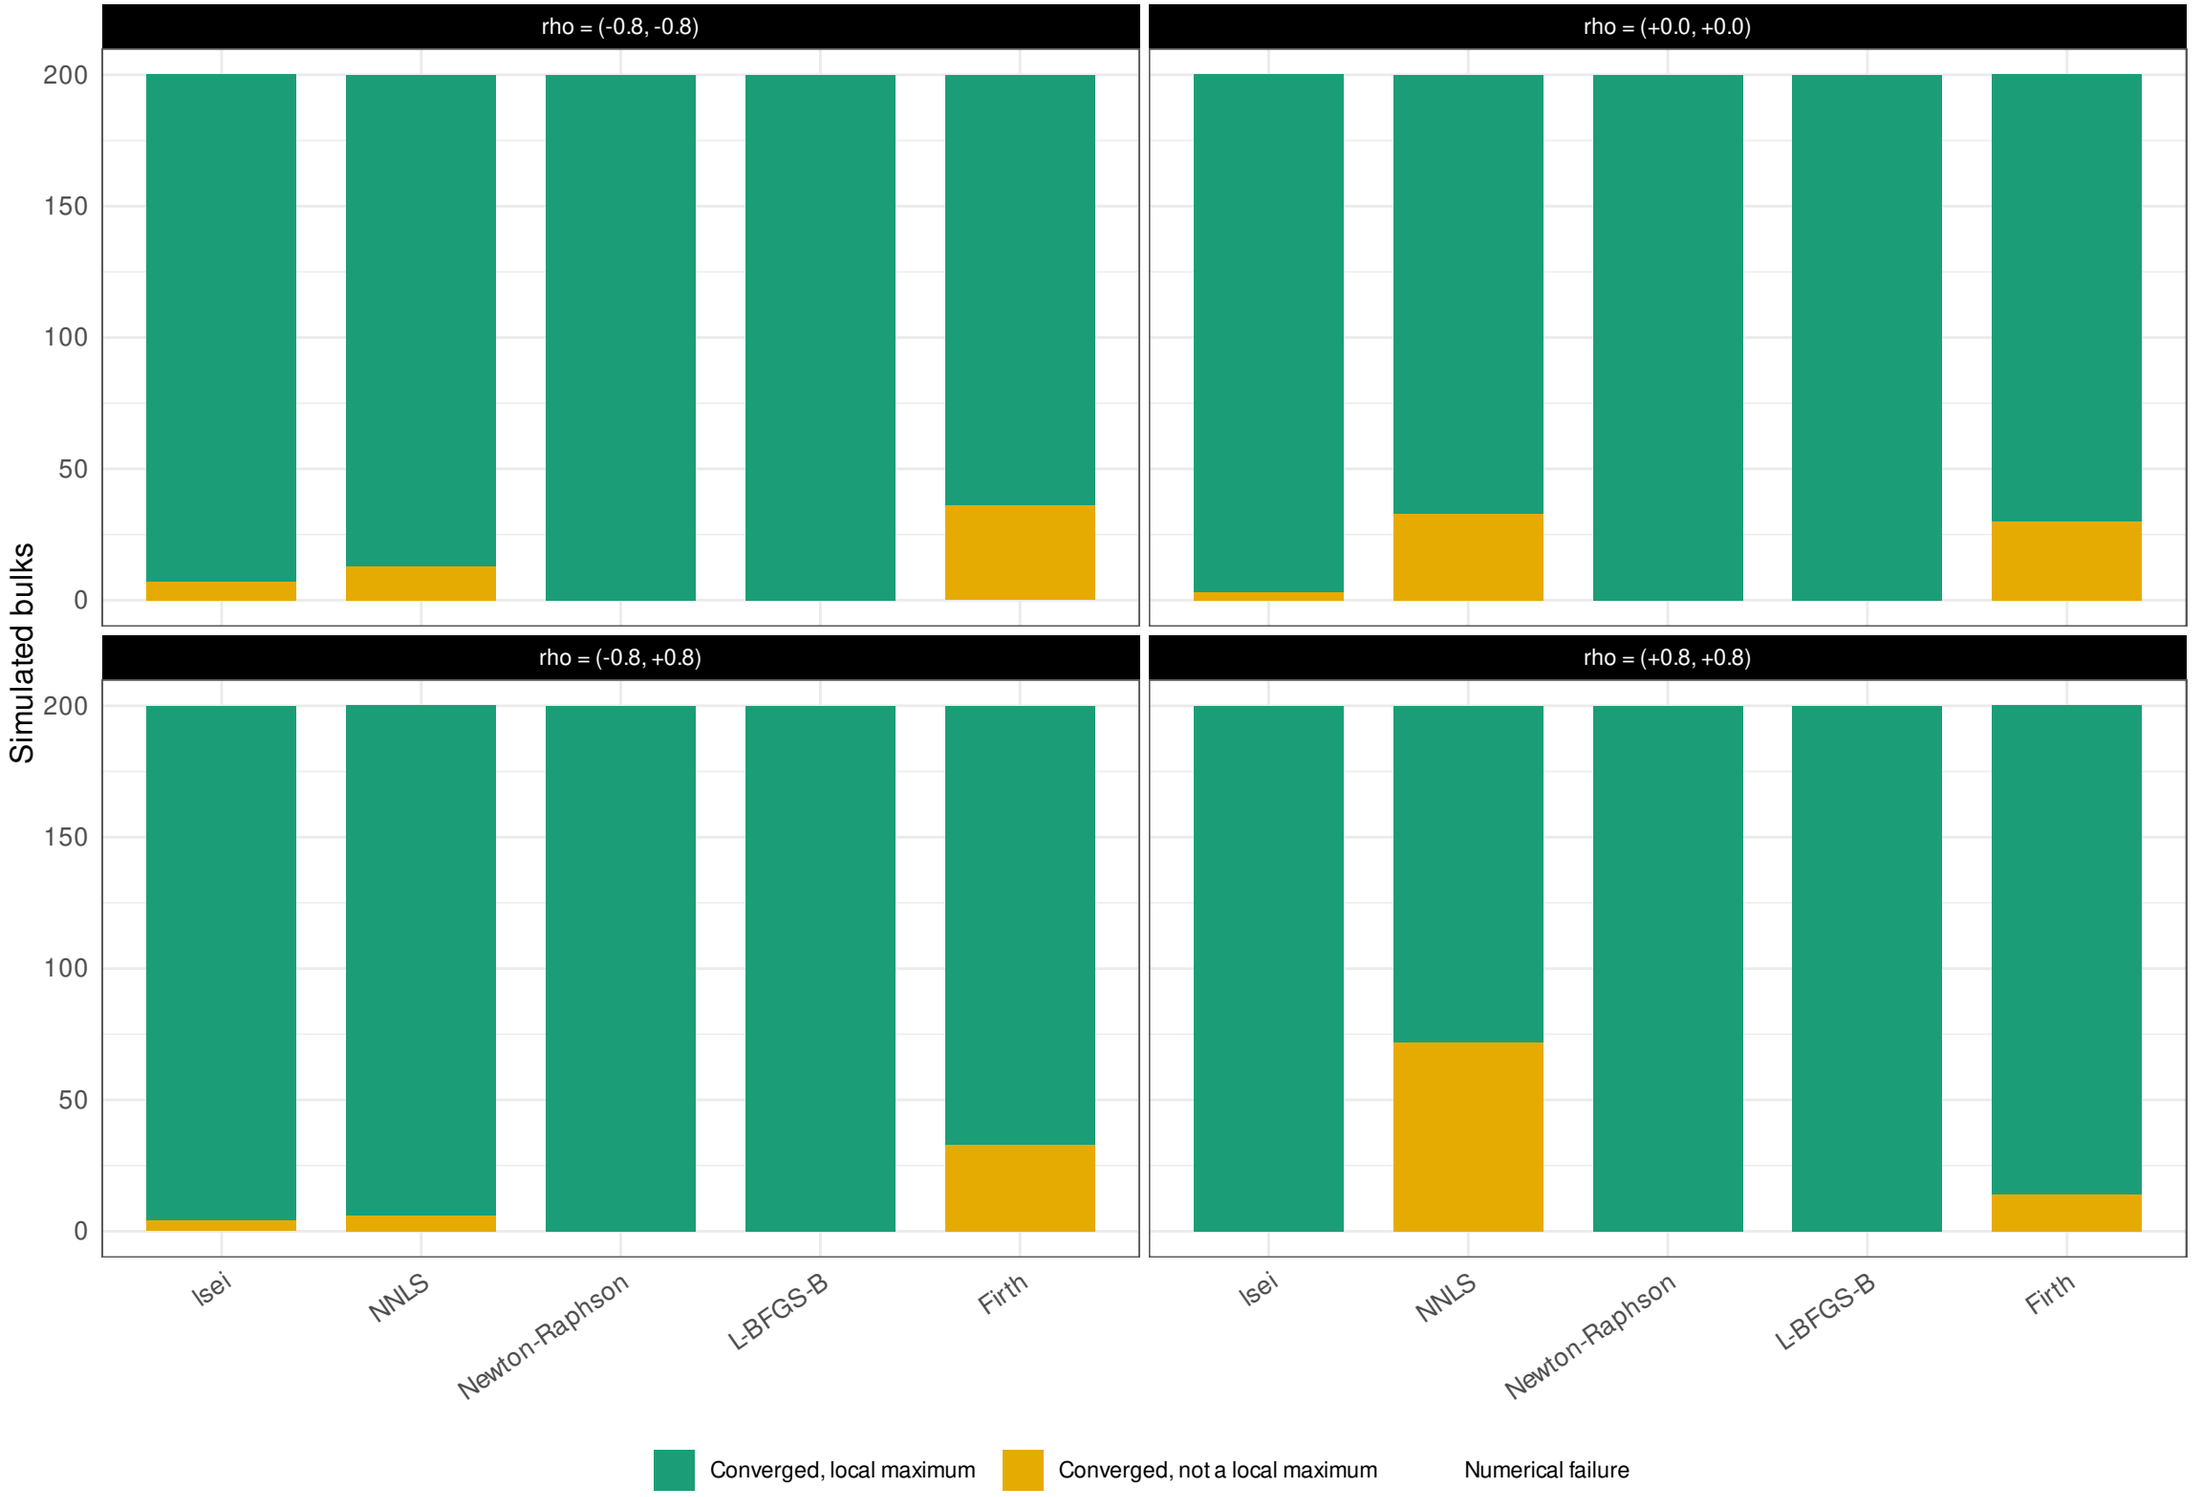

large centroid gap / homoscedastic / balanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

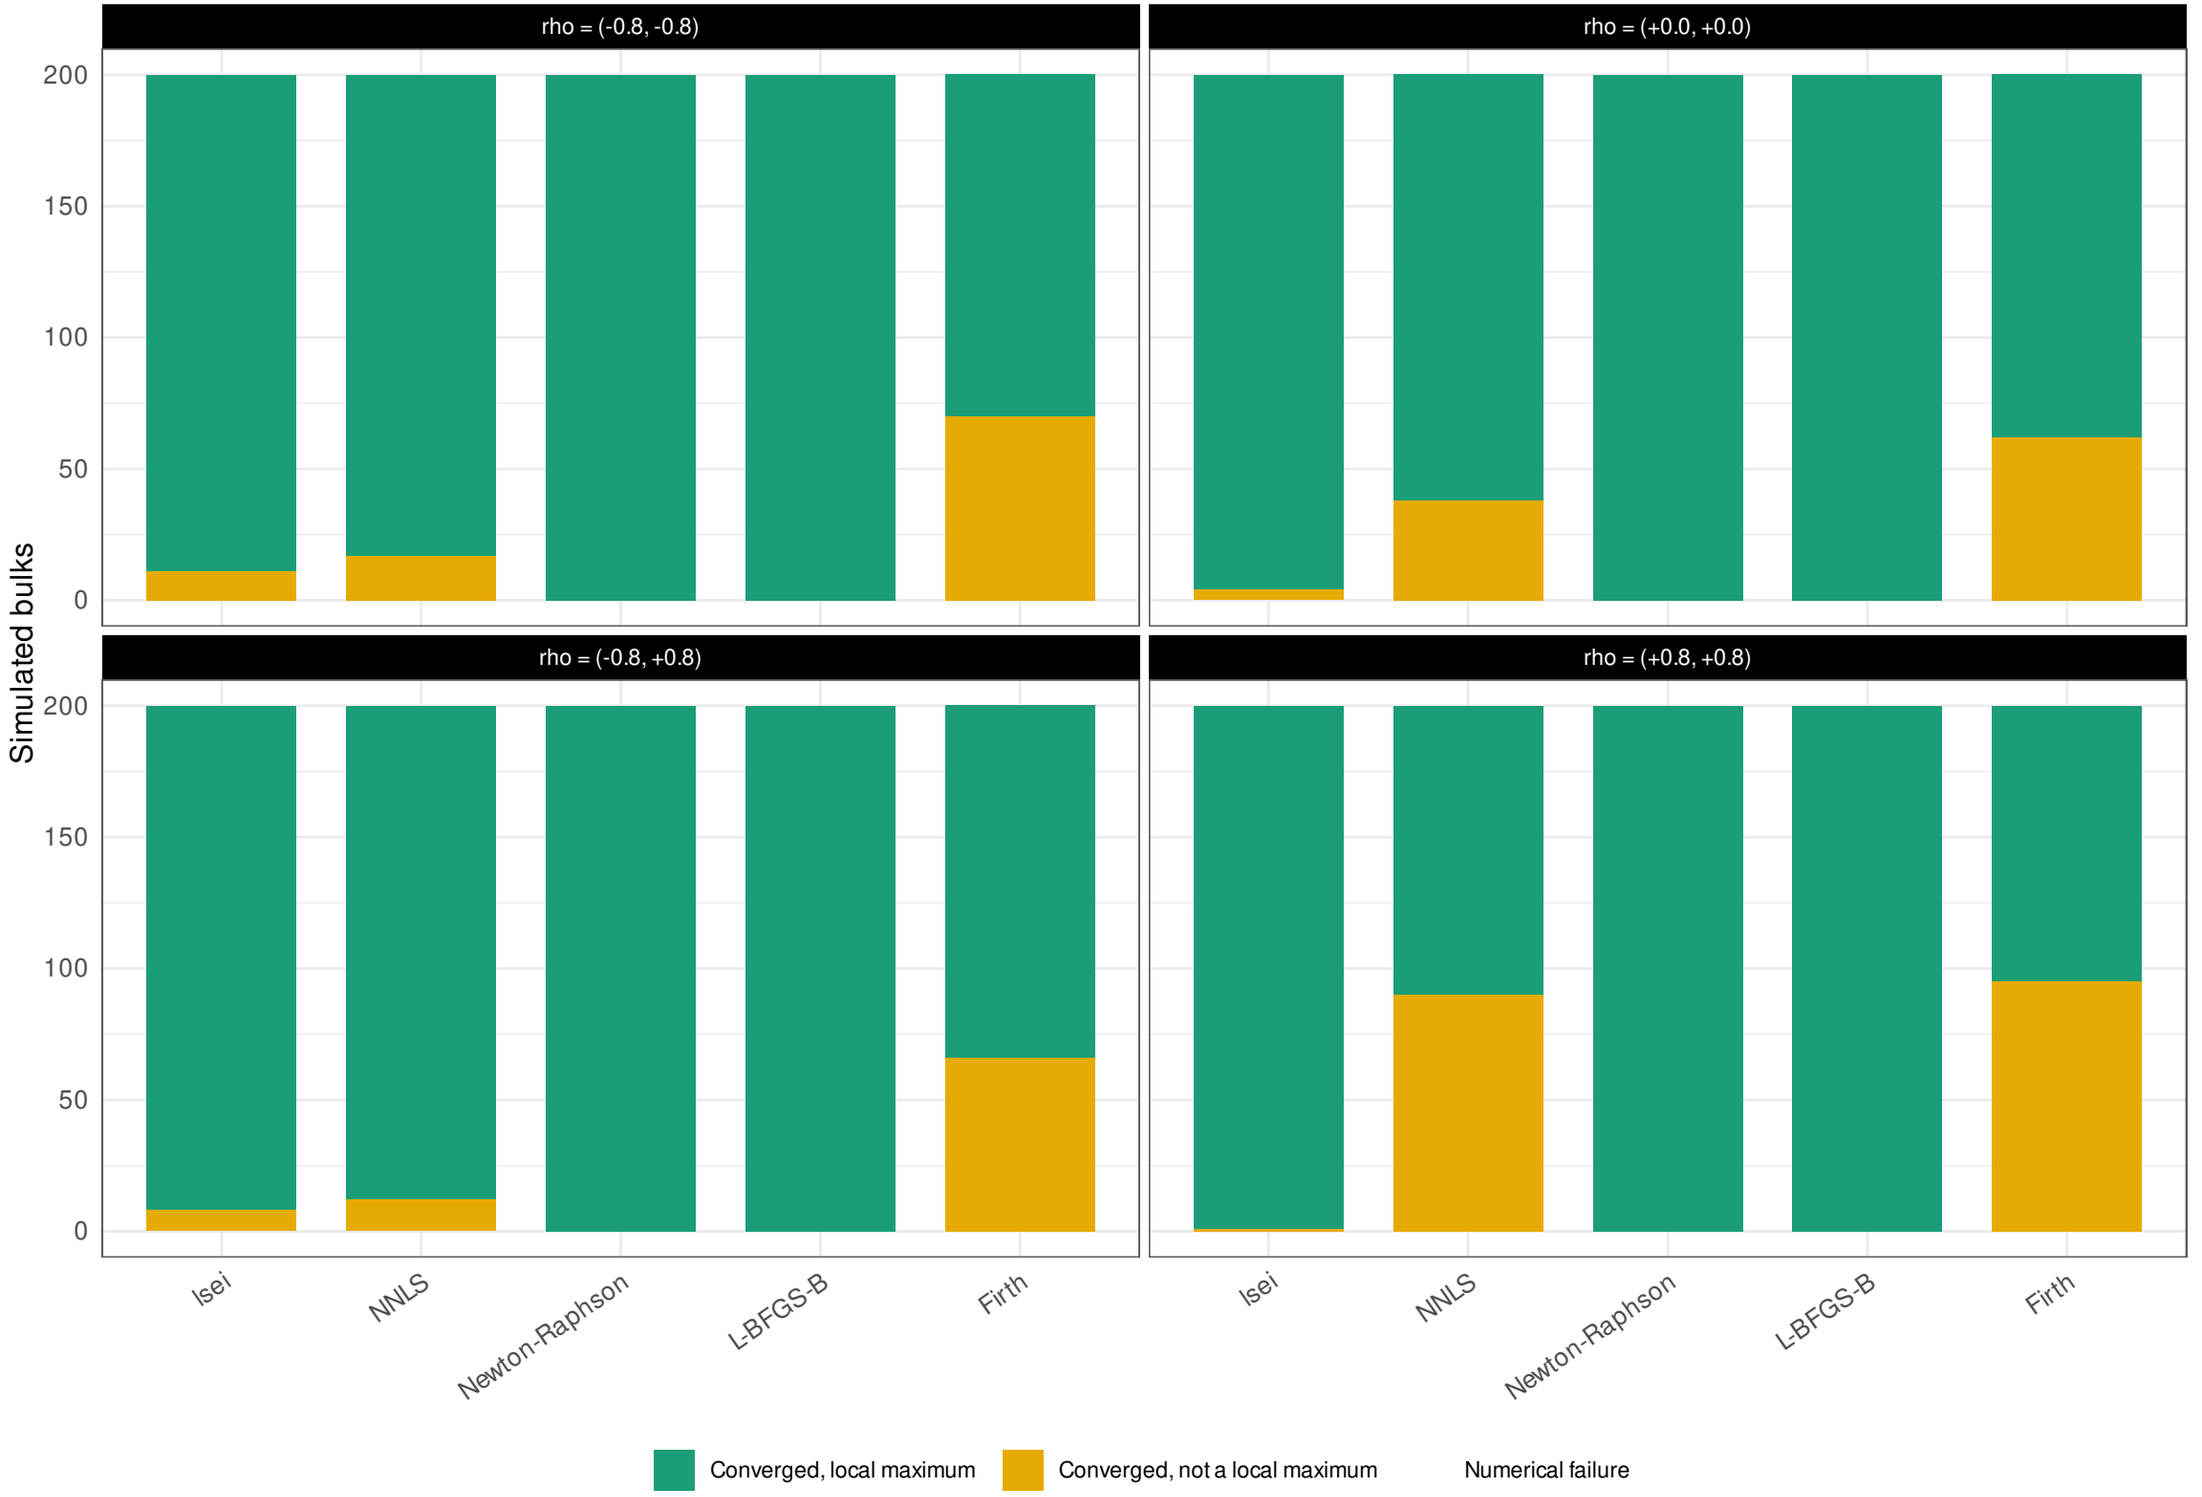

large centroid gap / homoscedastic / moderately unbalanced

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

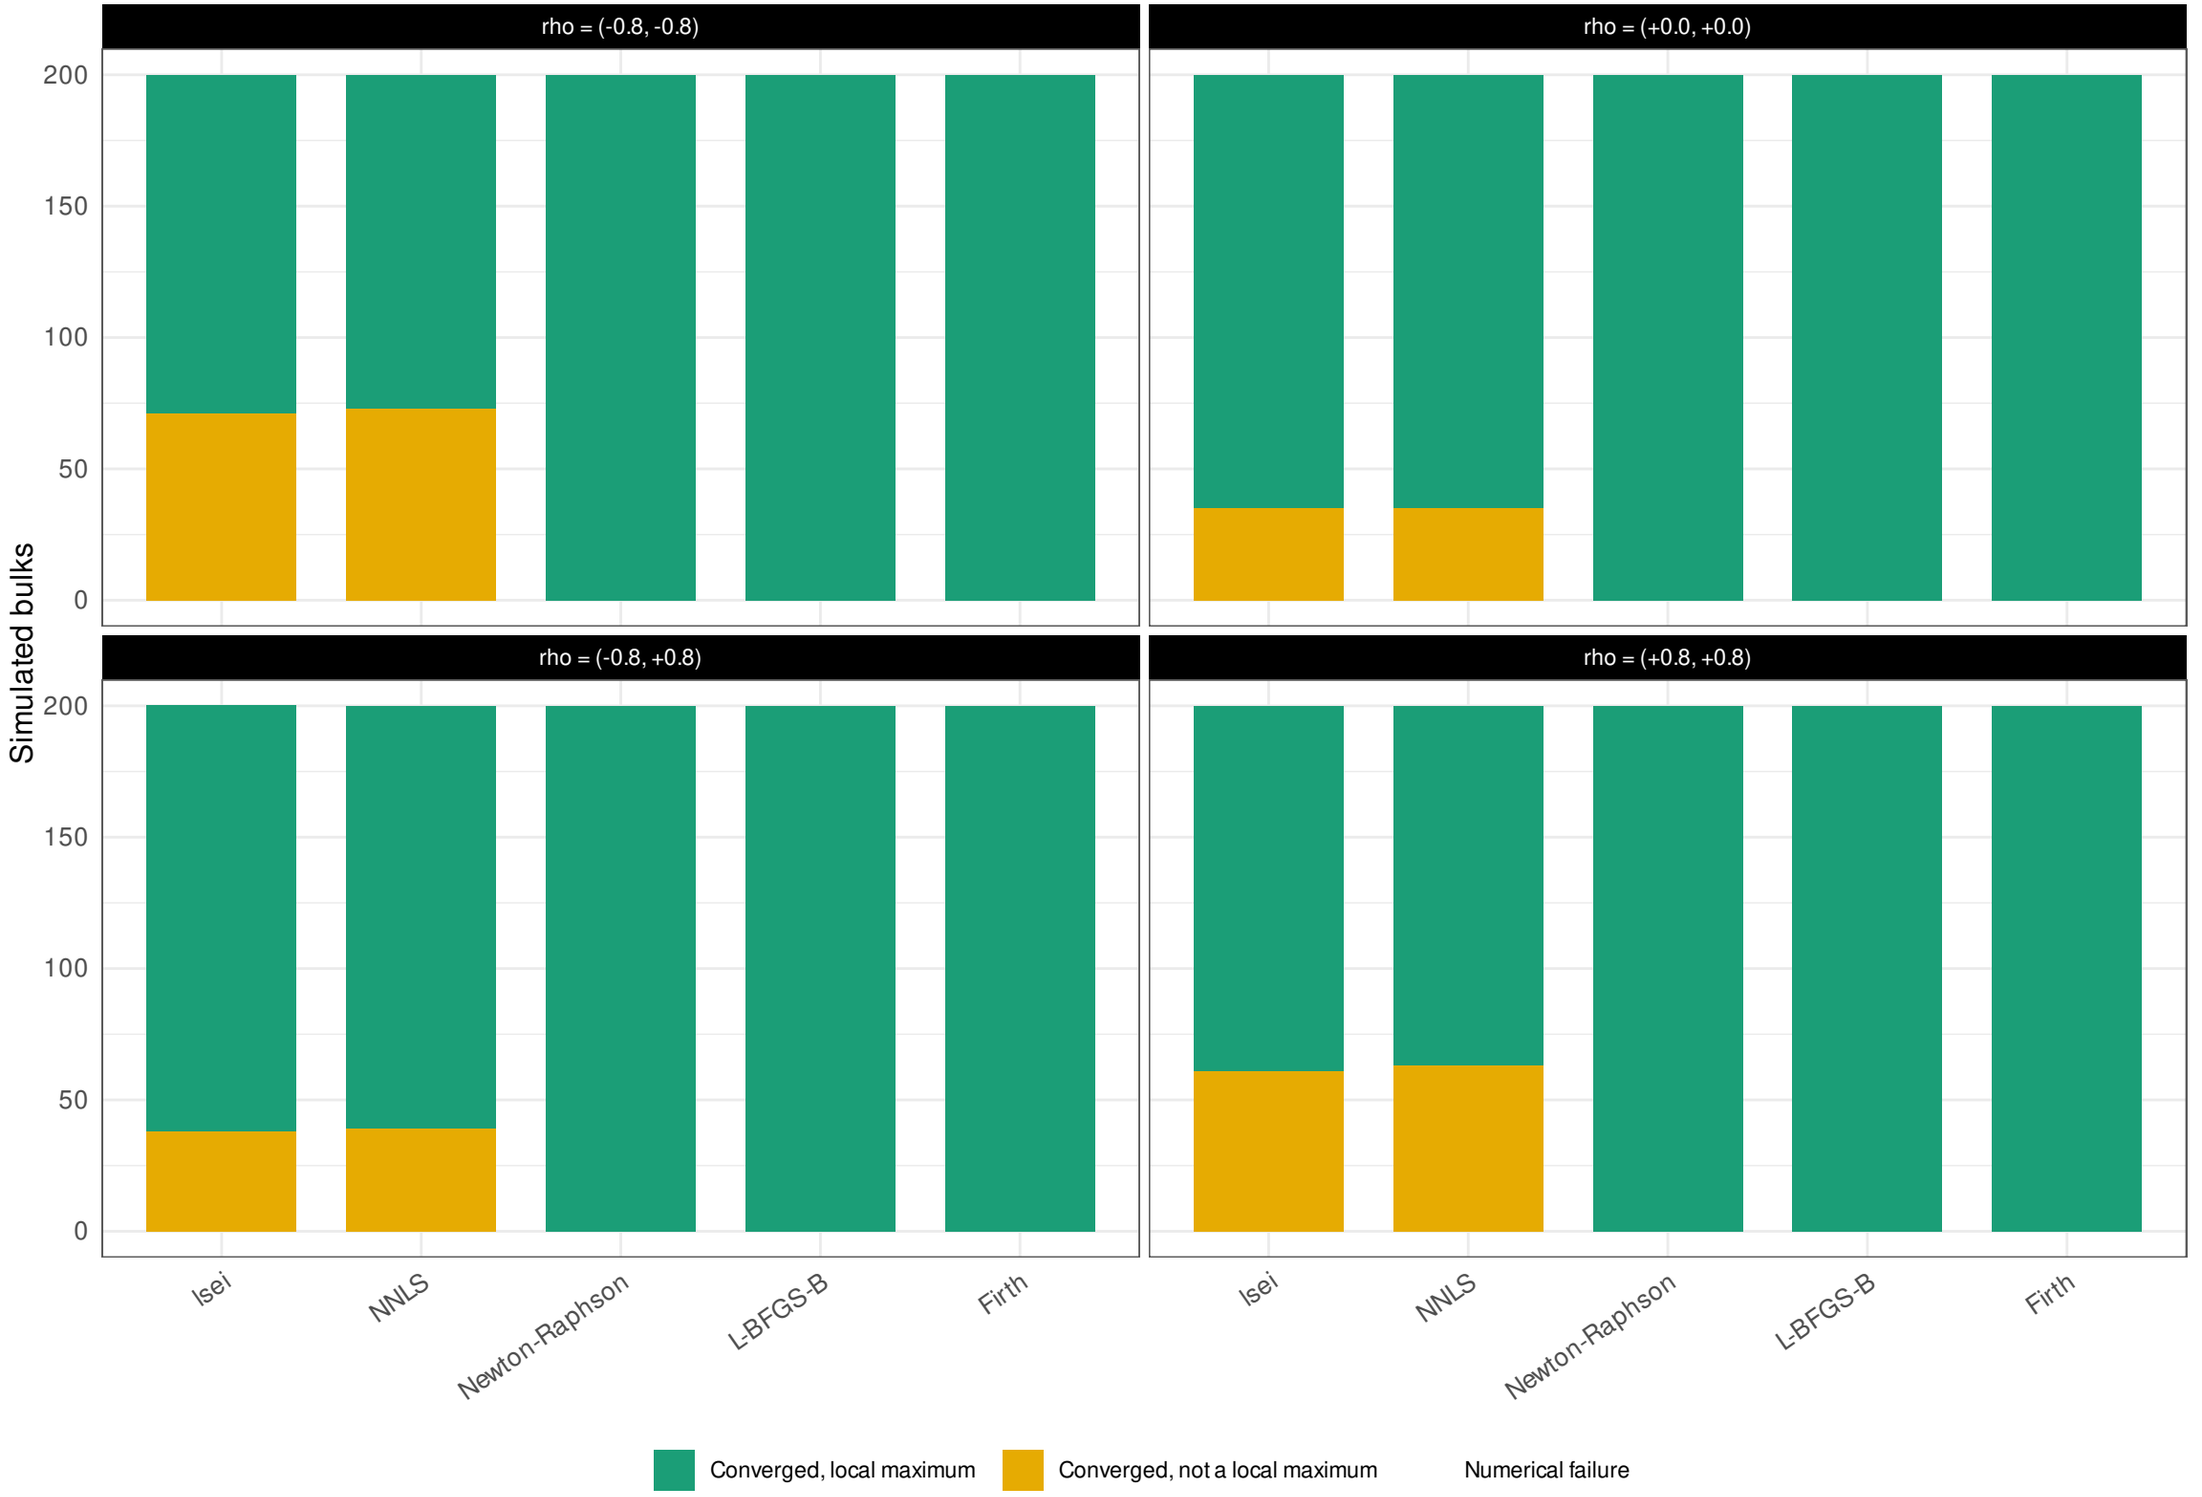

large centroid gap / homoscedastic / highly unbalanced
