Mean Aitchison distance of every method

small centroid gap / homoscedastic / balanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

small centroid gap / homoscedastic / moderately unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

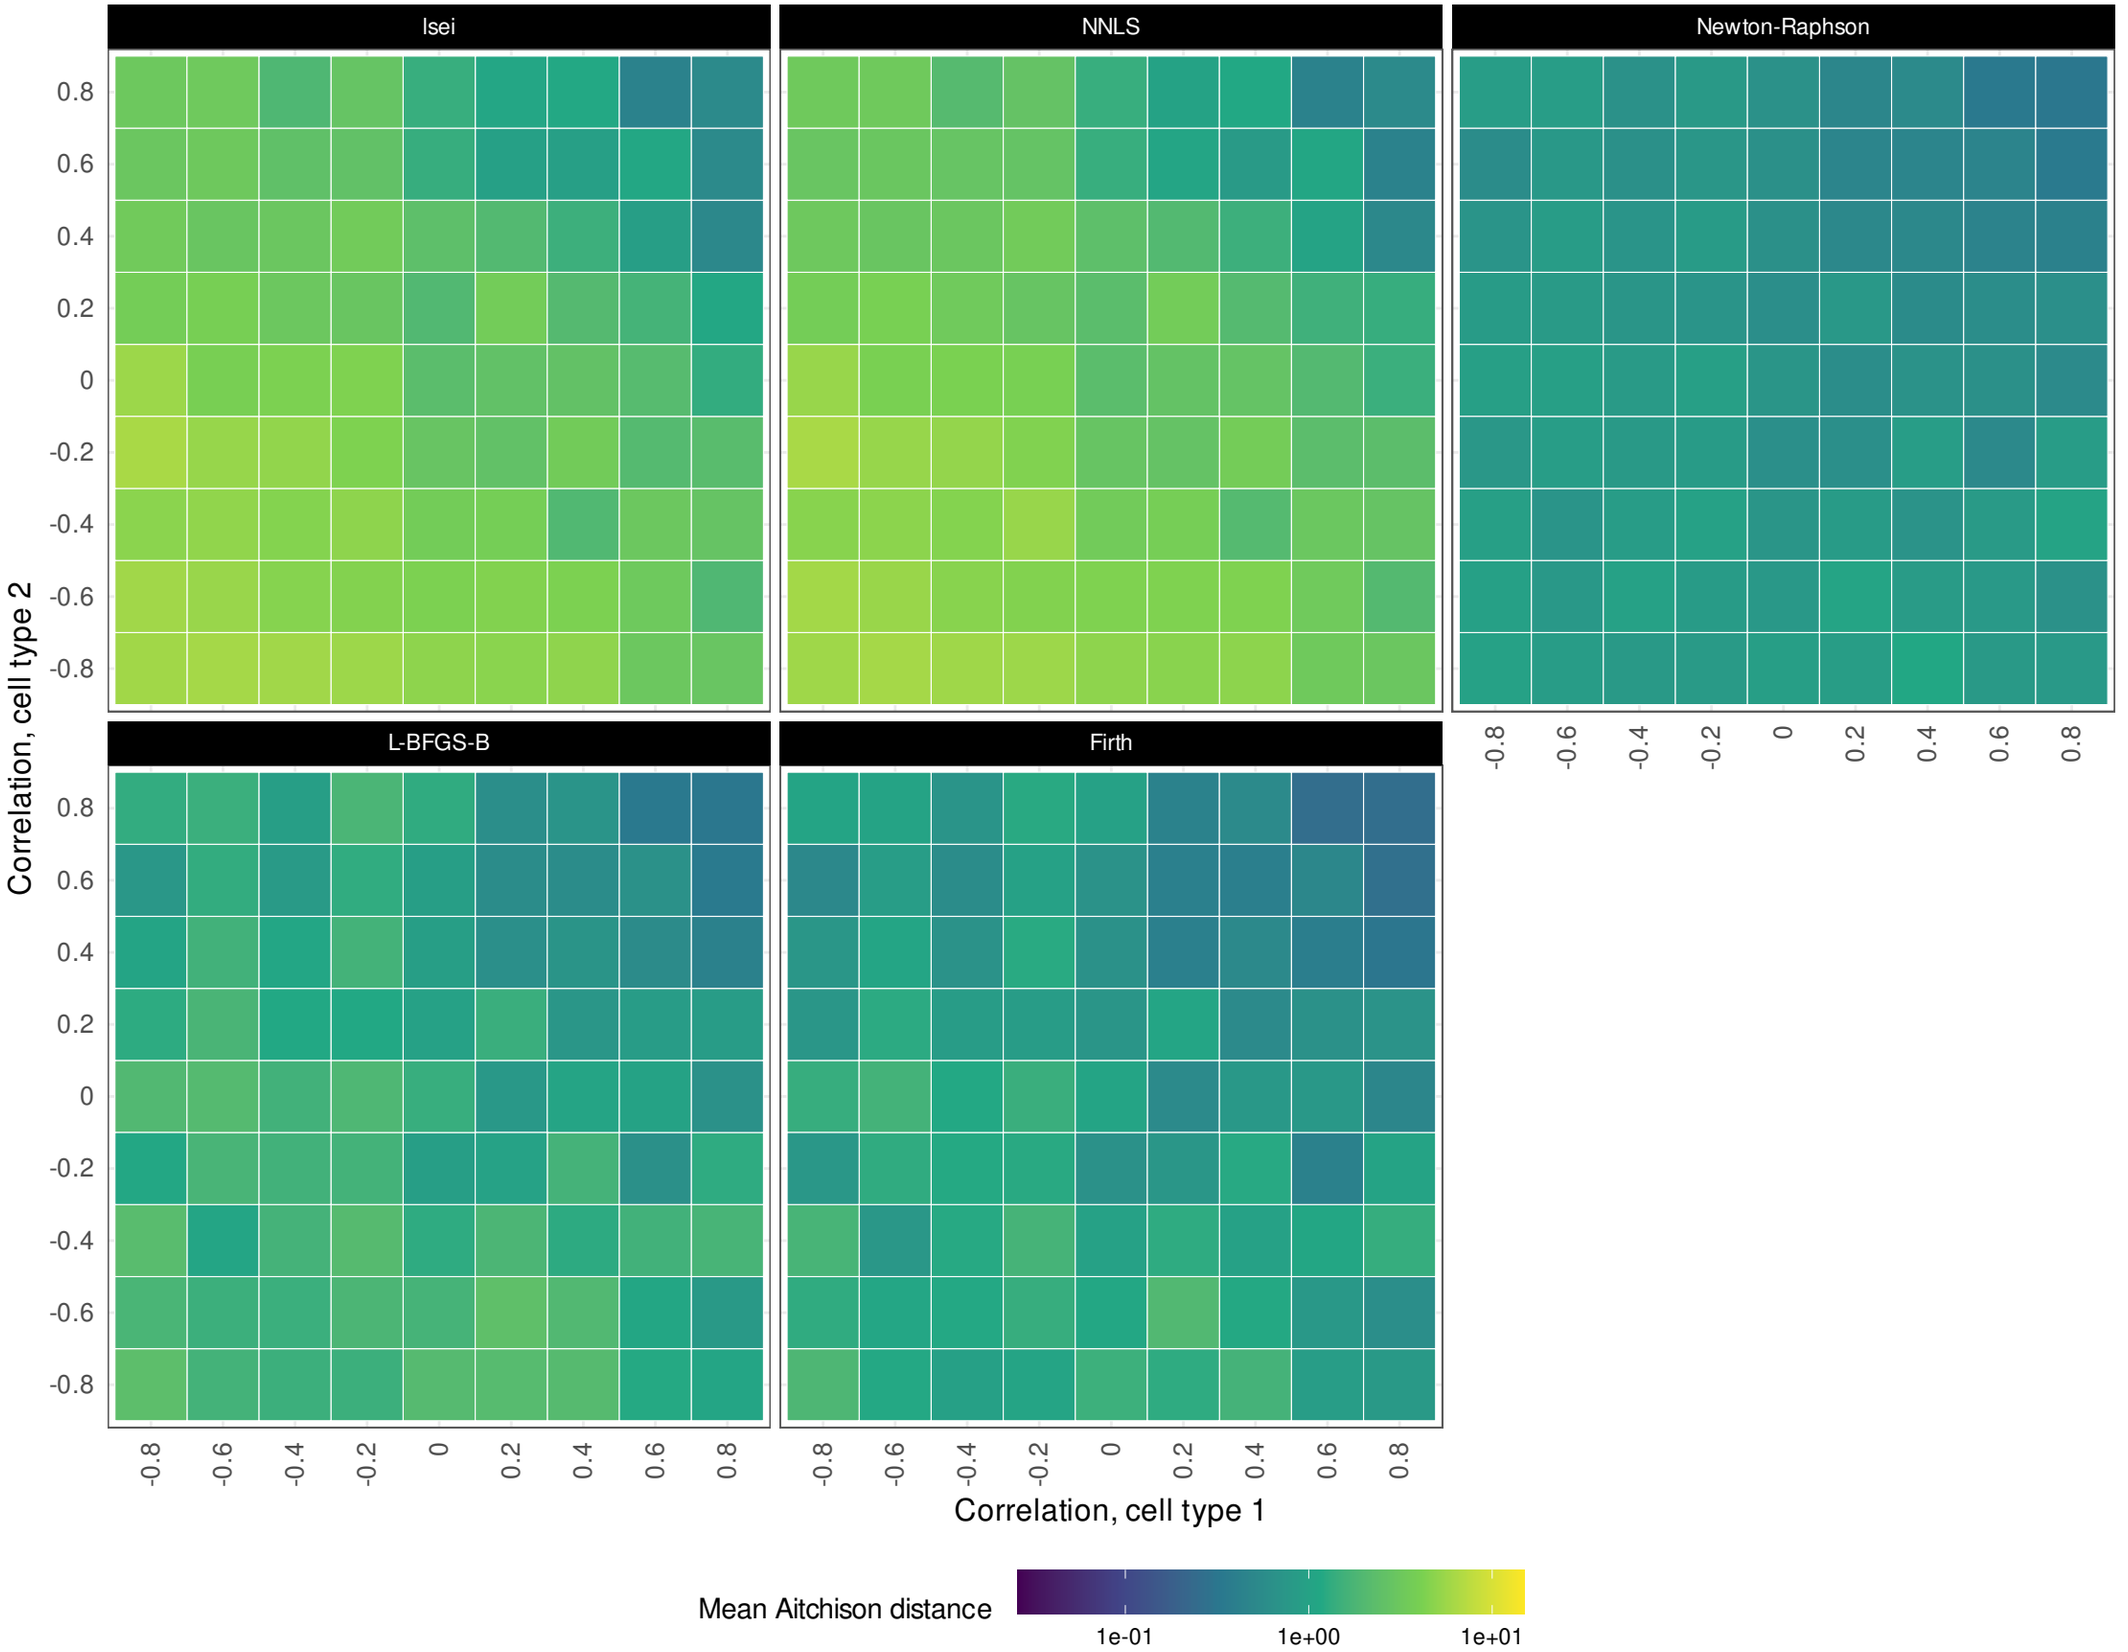

small centroid gap / homoscedastic / highly unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

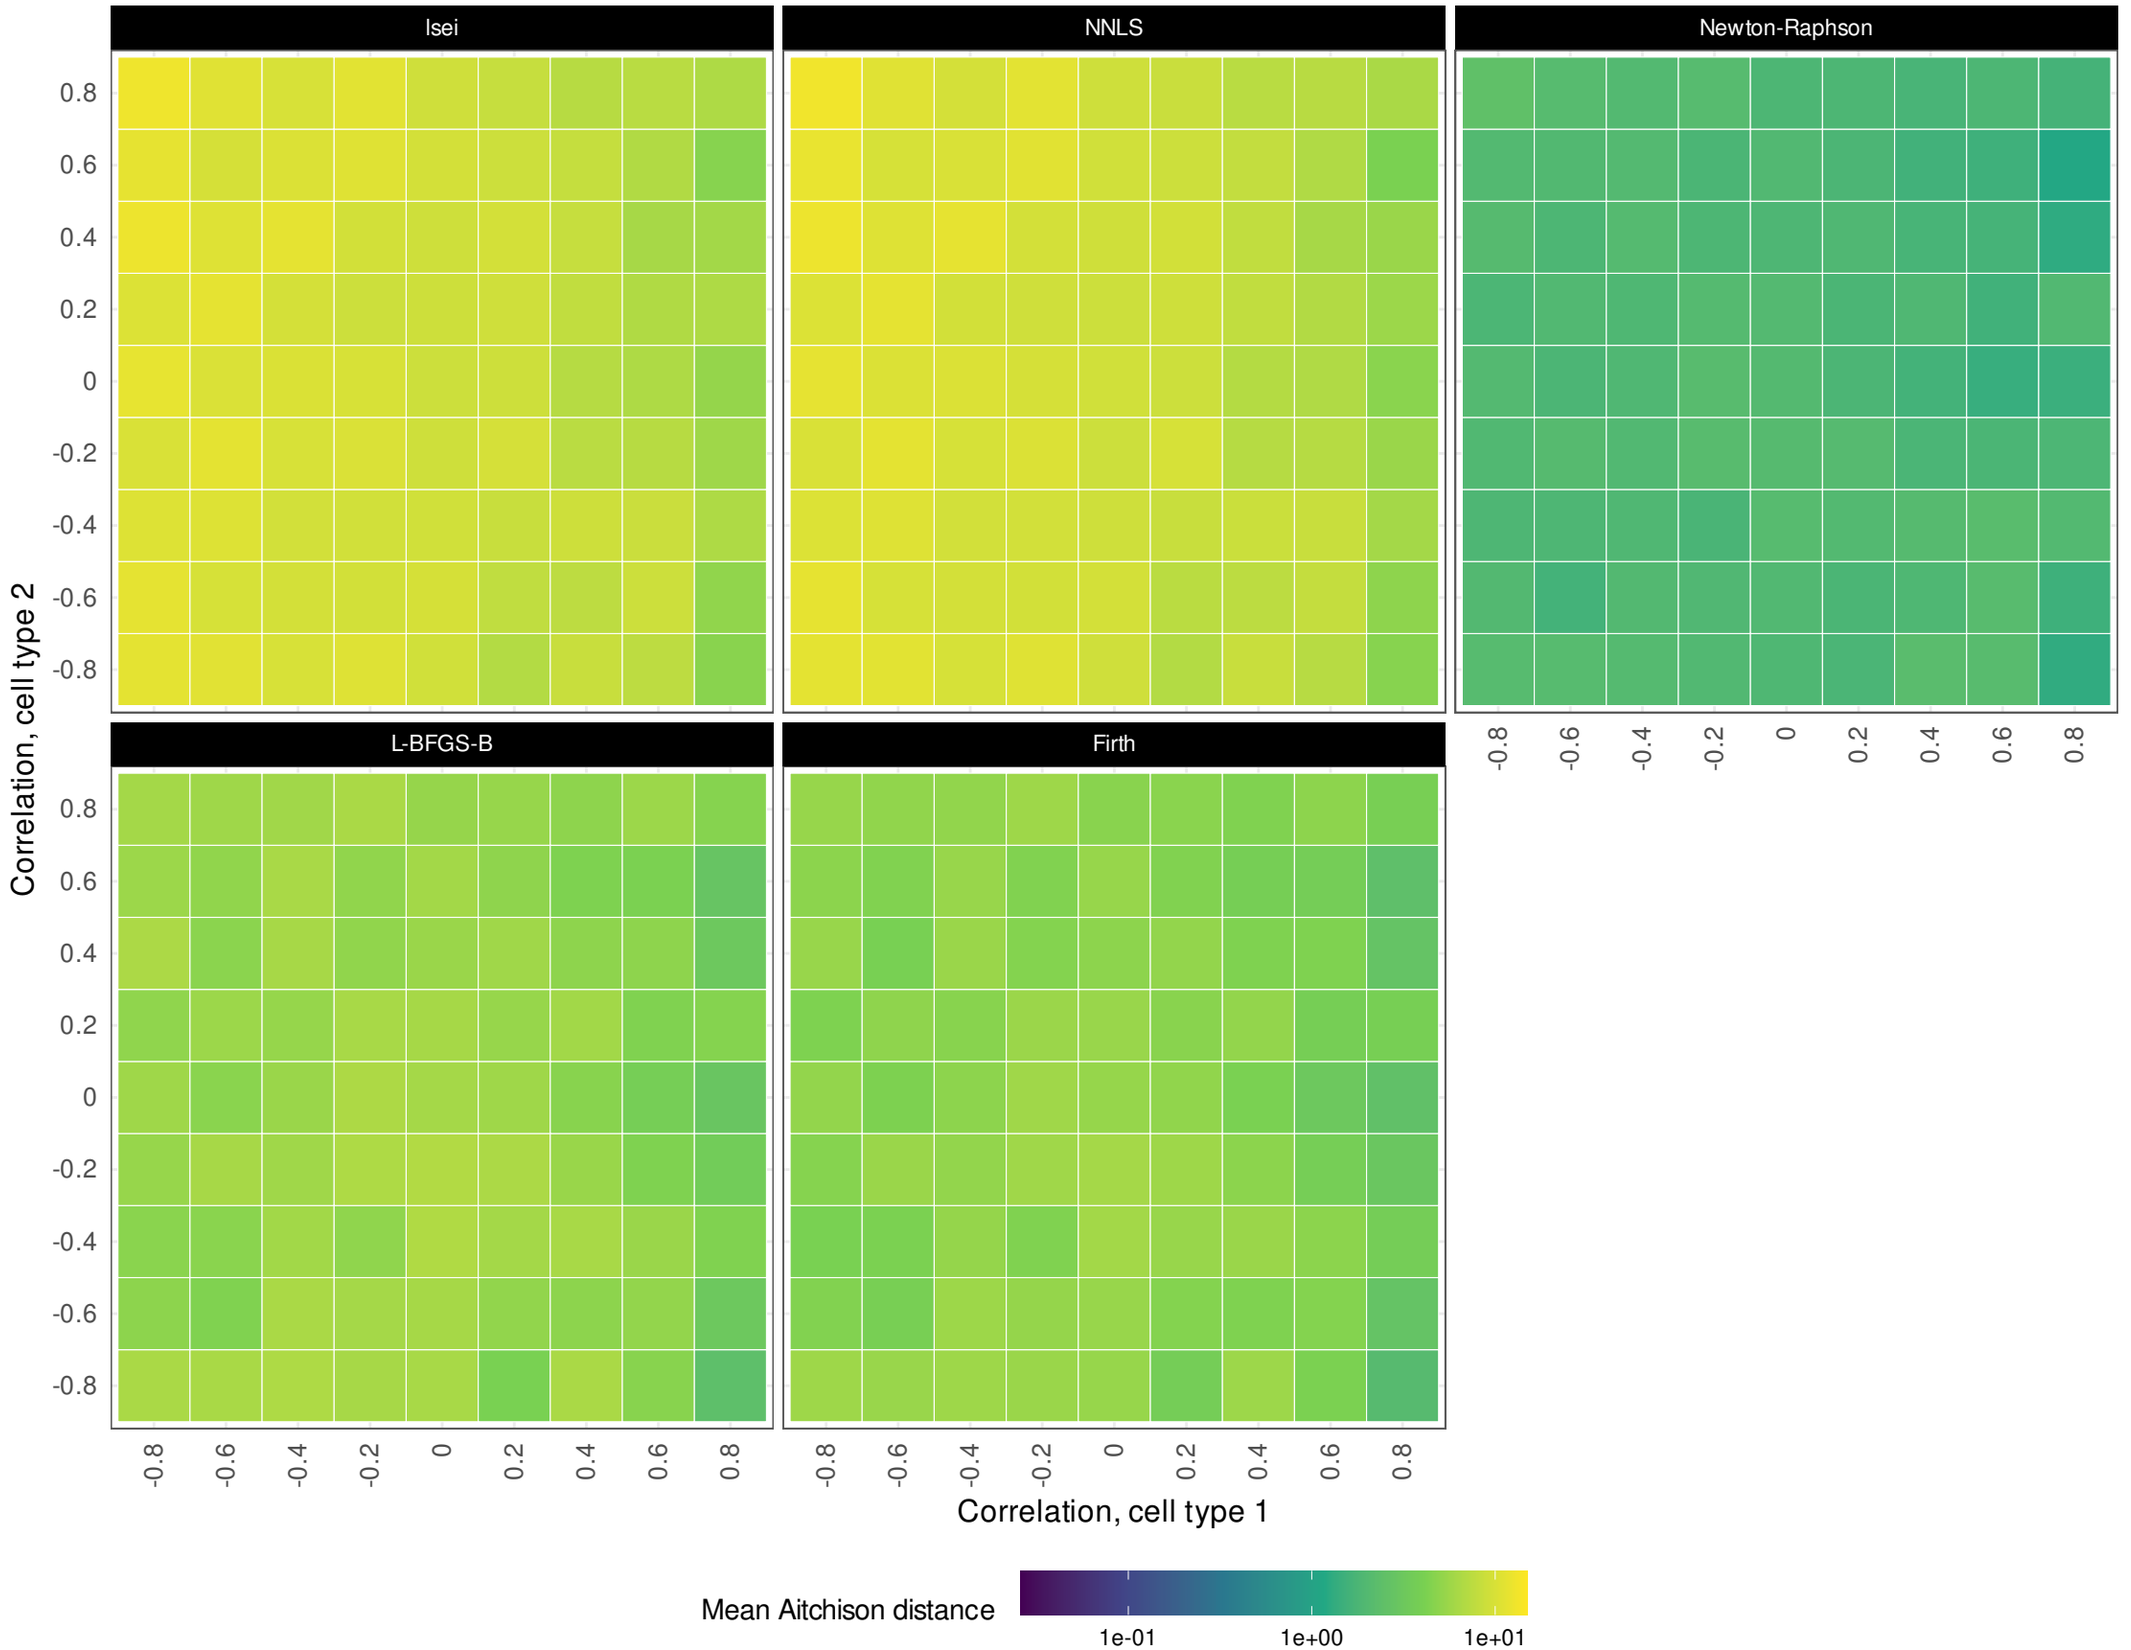

small centroid gap / heteroscedastic / balanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

small centroid gap / heteroscedastic / moderately unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

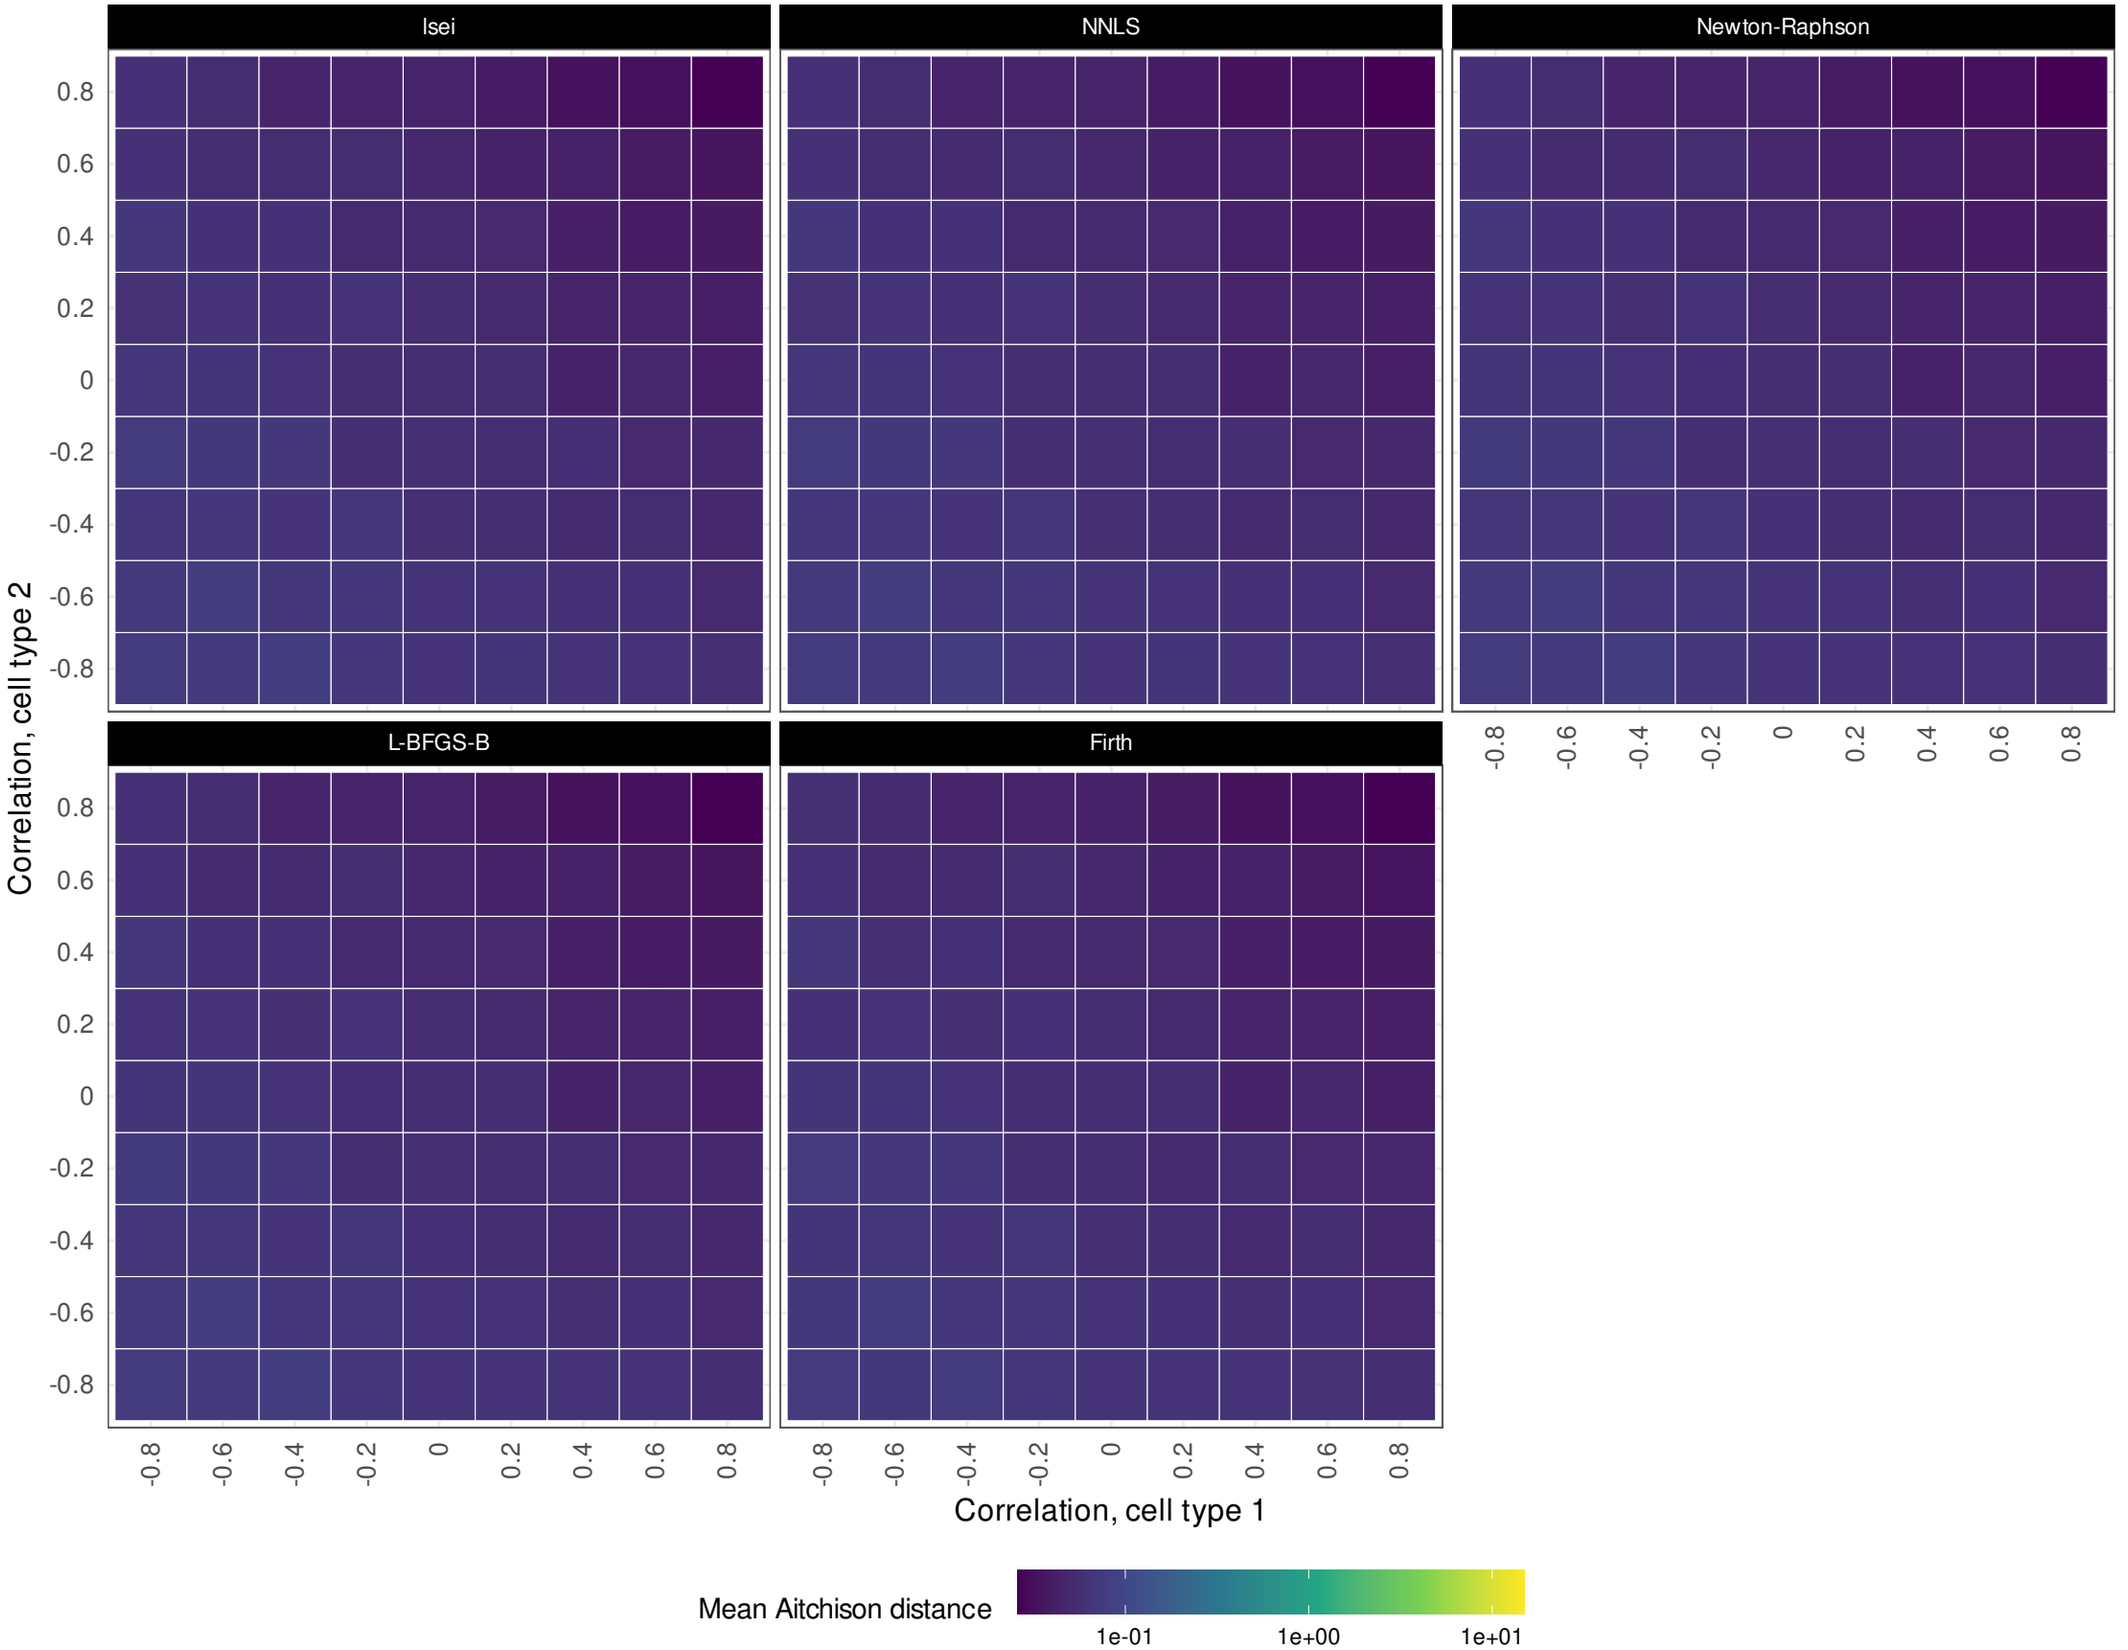

small centroid gap / heteroscedastic / highly unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

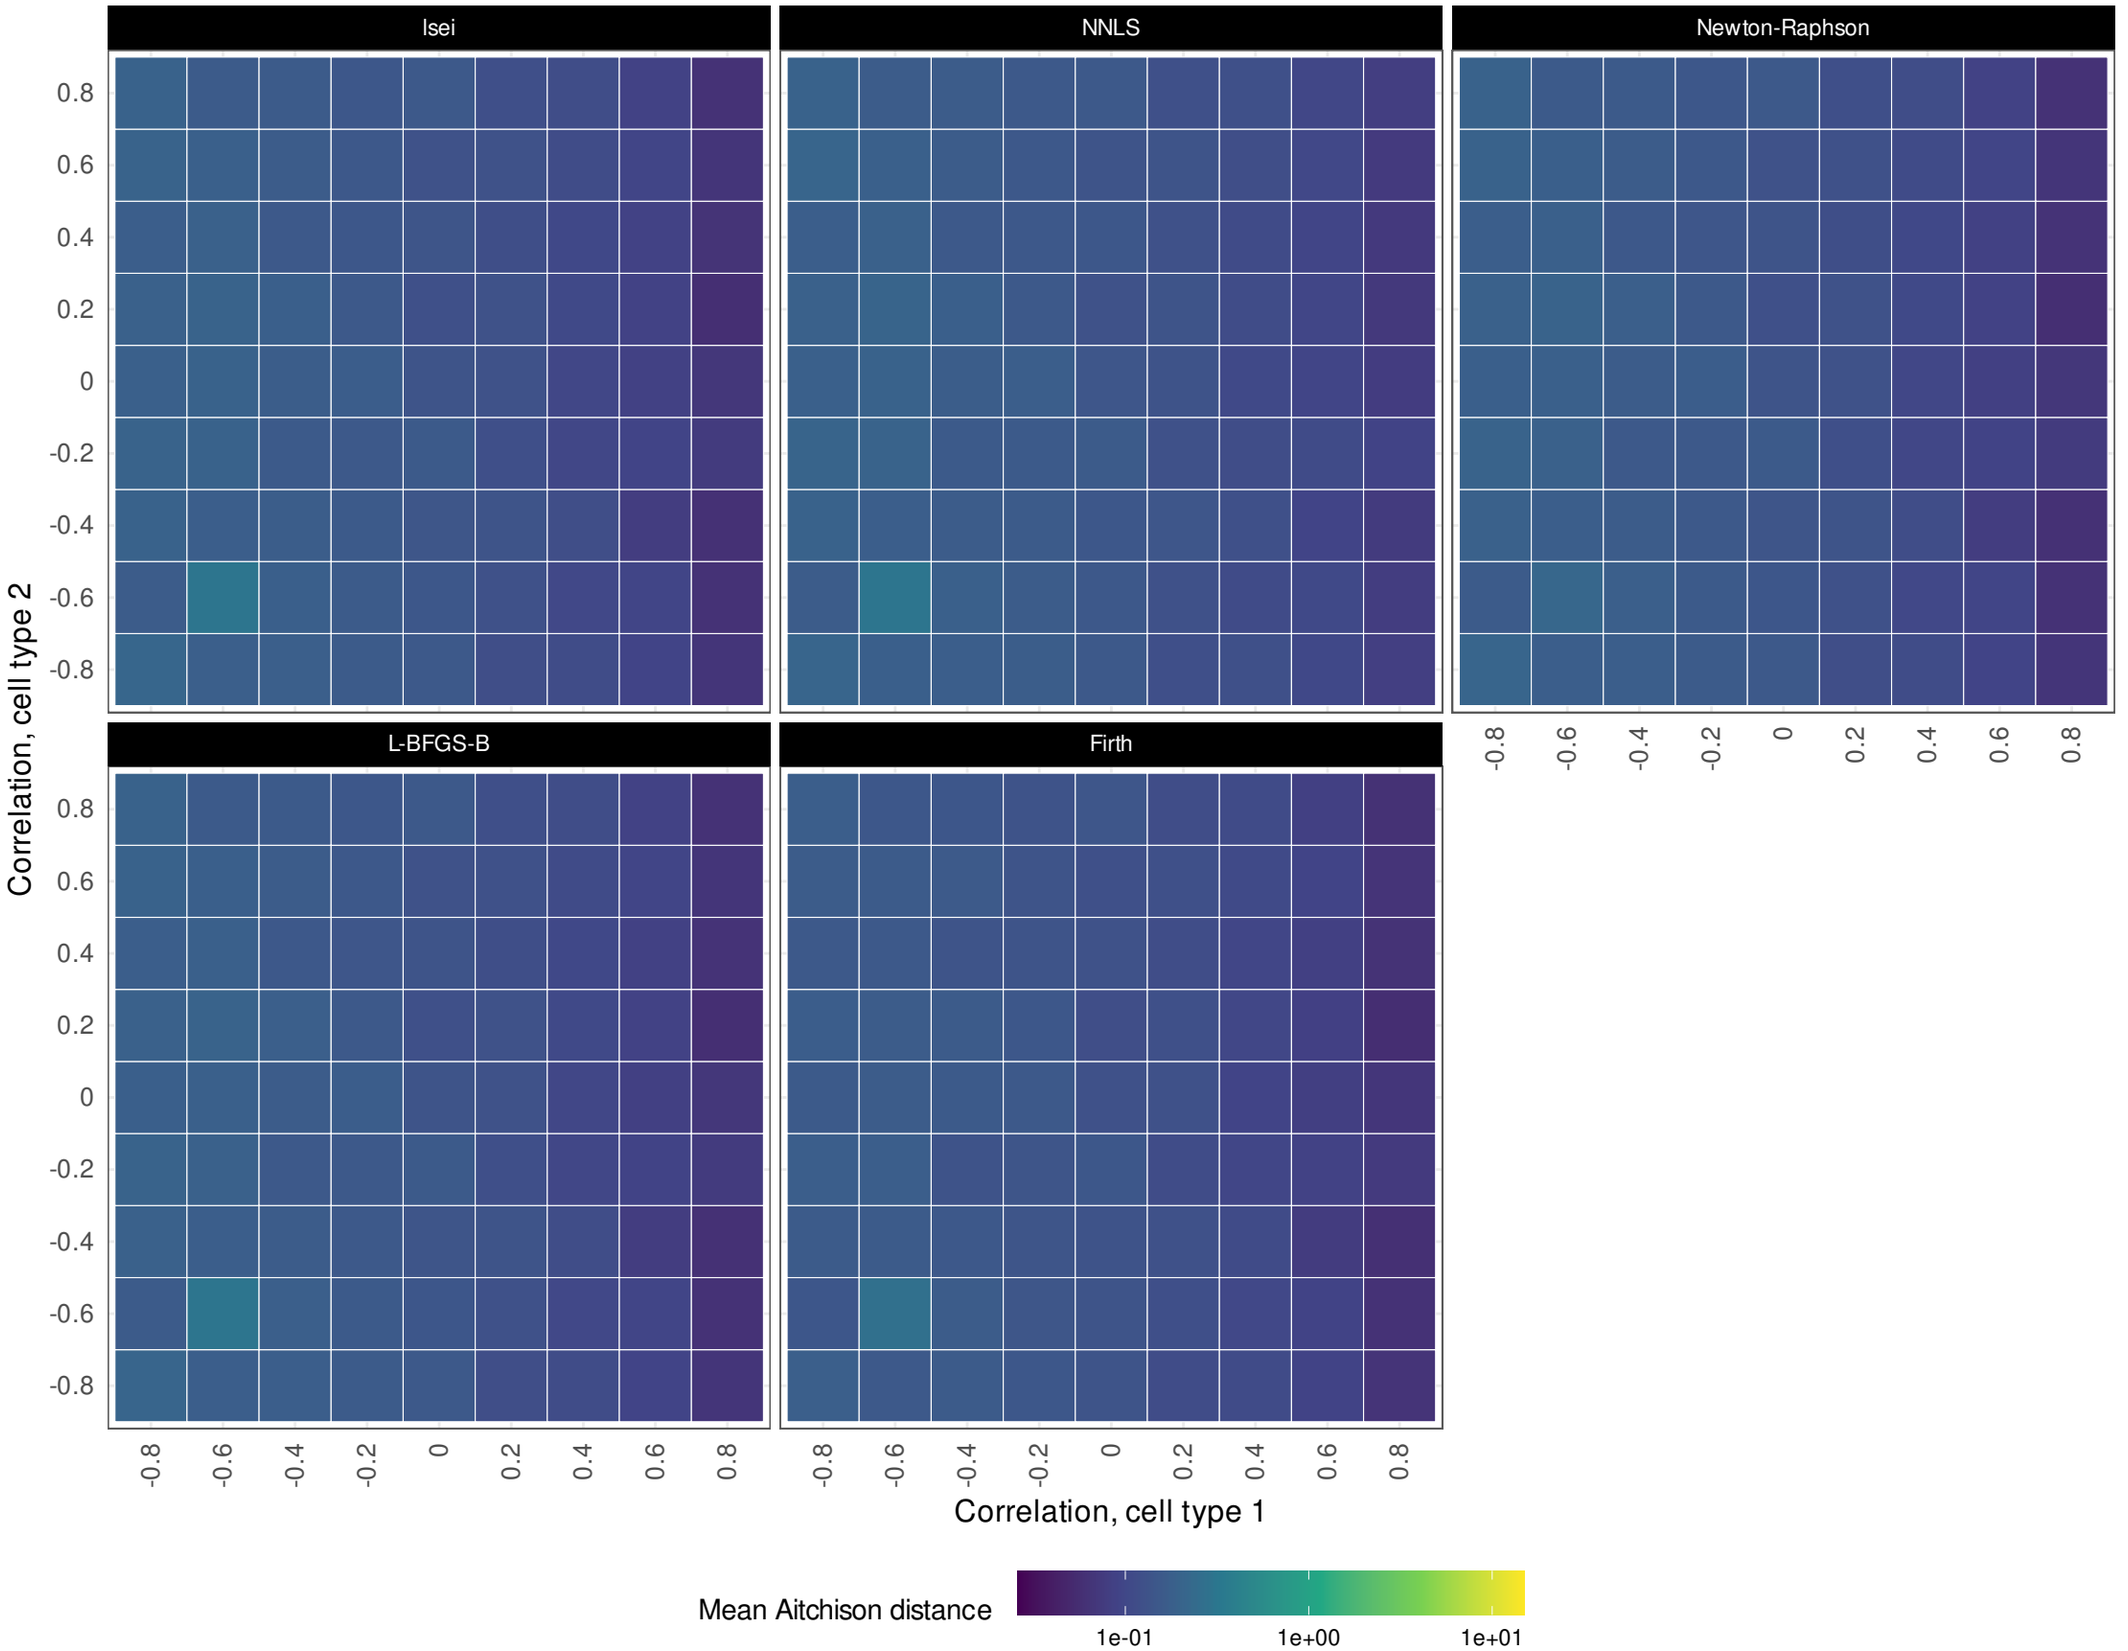

large centroid gap / homoscedastic / balanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

large centroid gap / homoscedastic / moderately unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

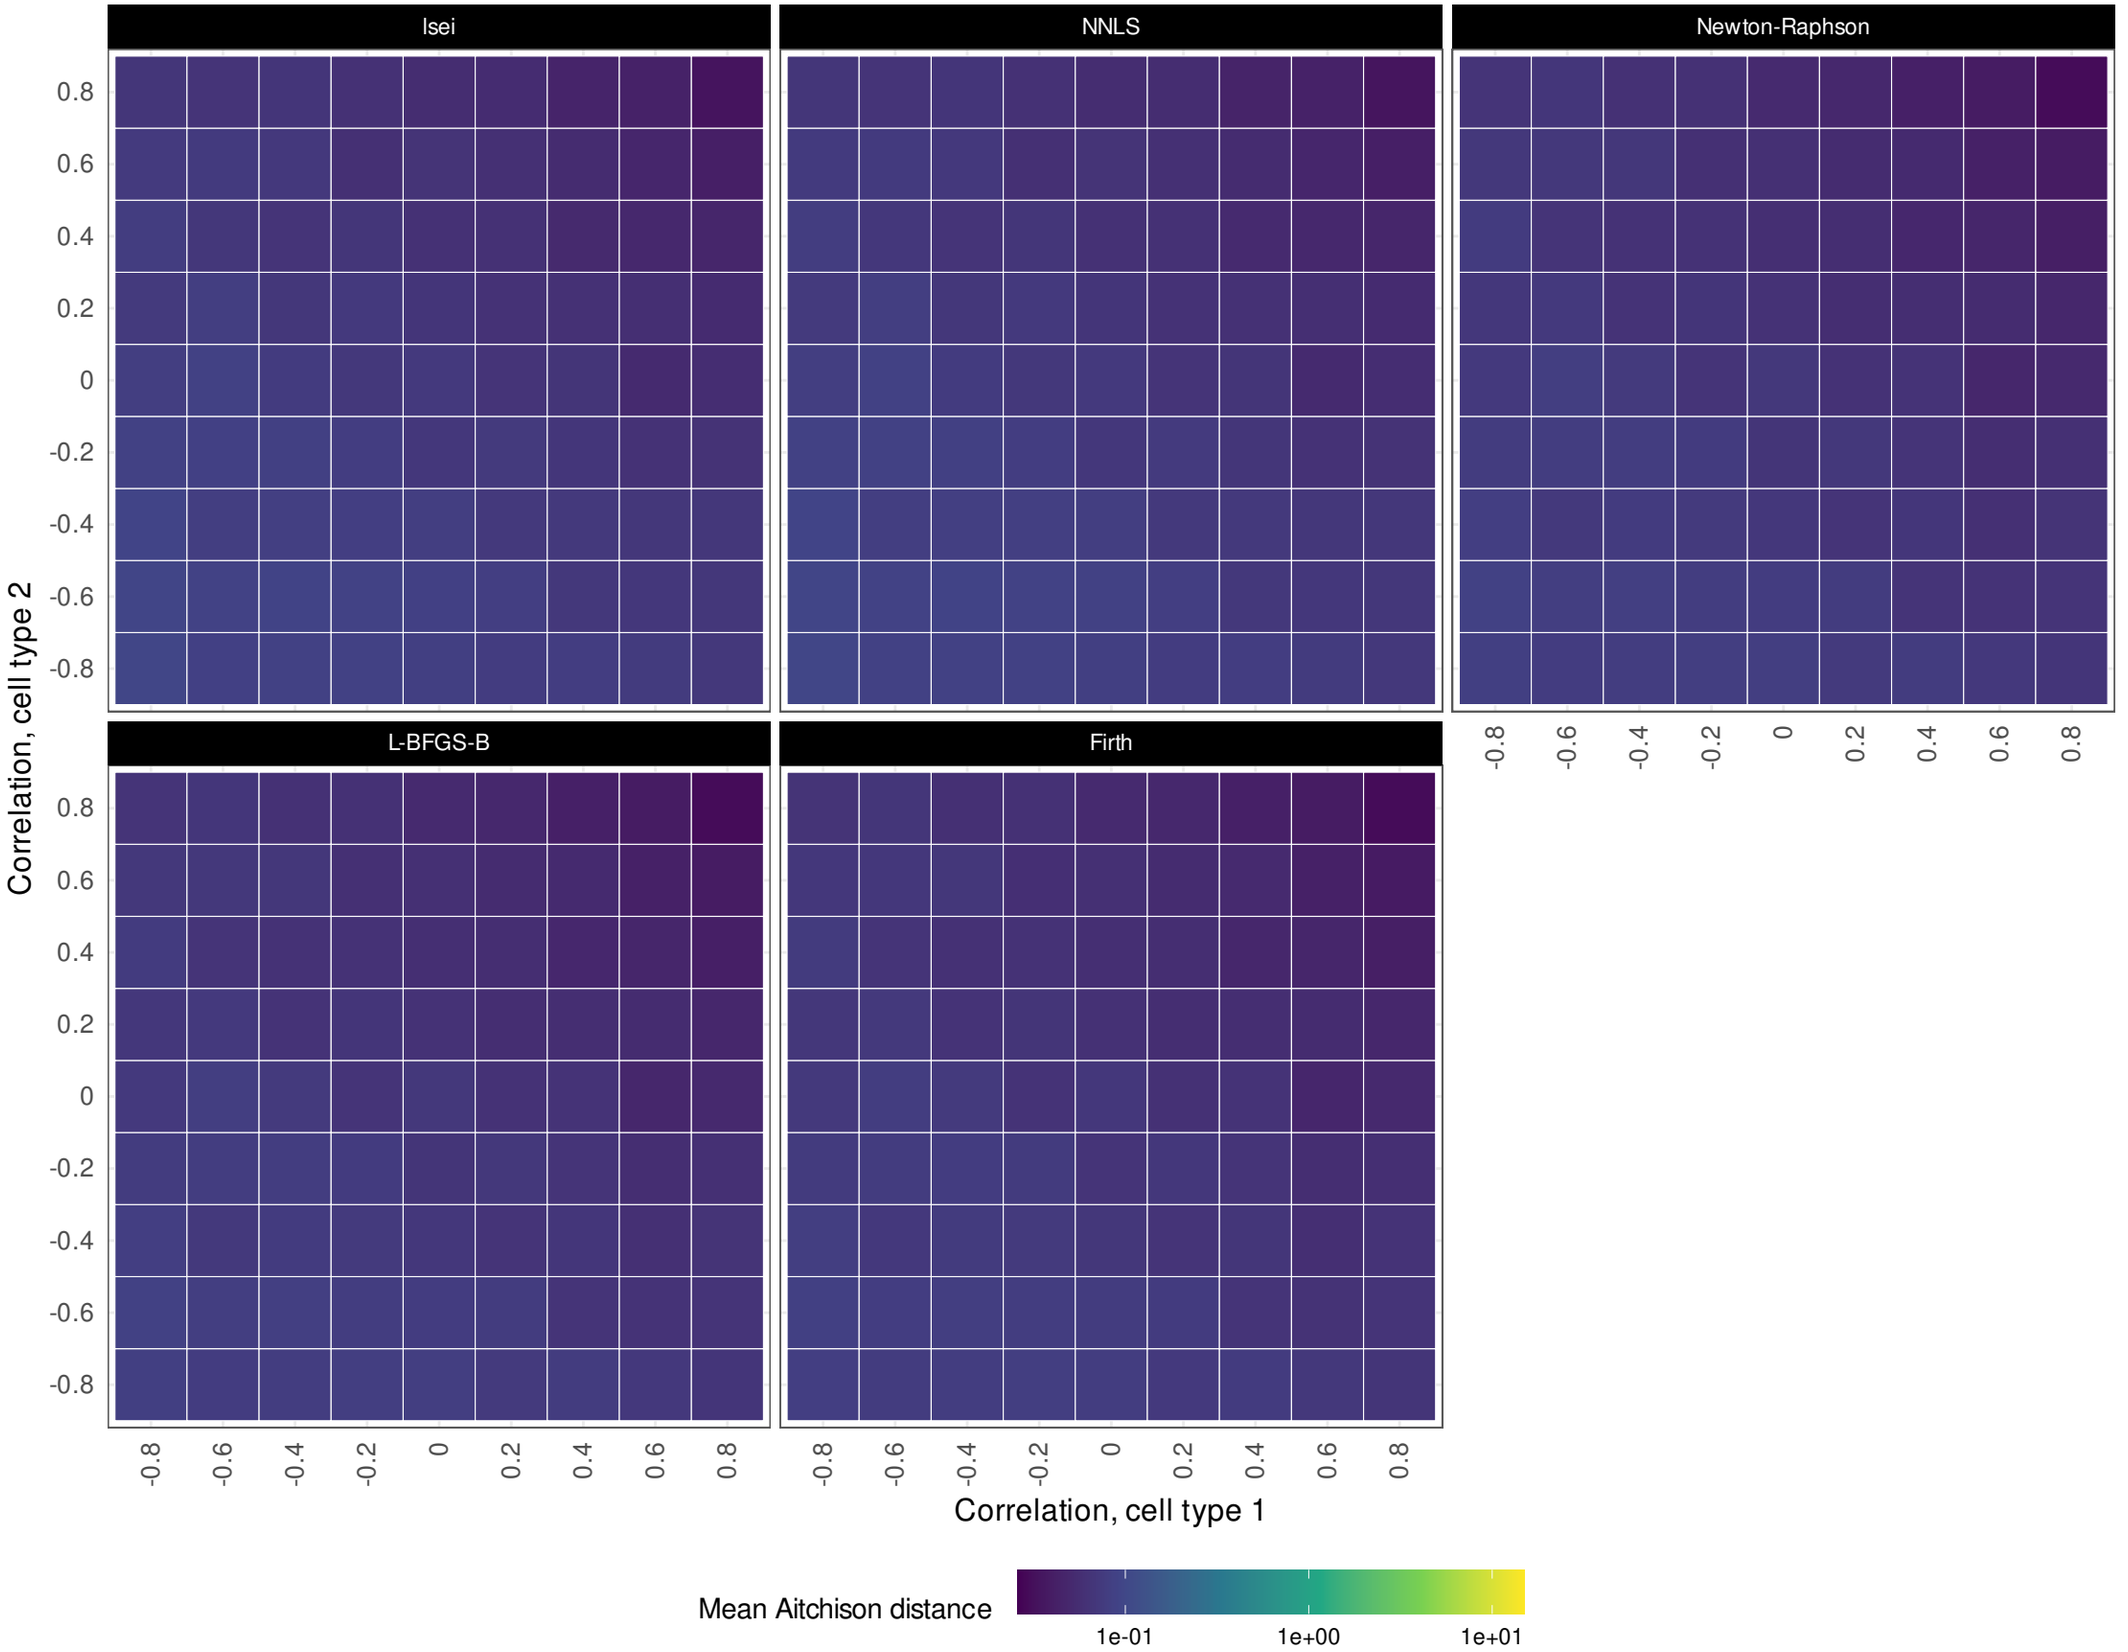

large centroid gap / homoscedastic / highly unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

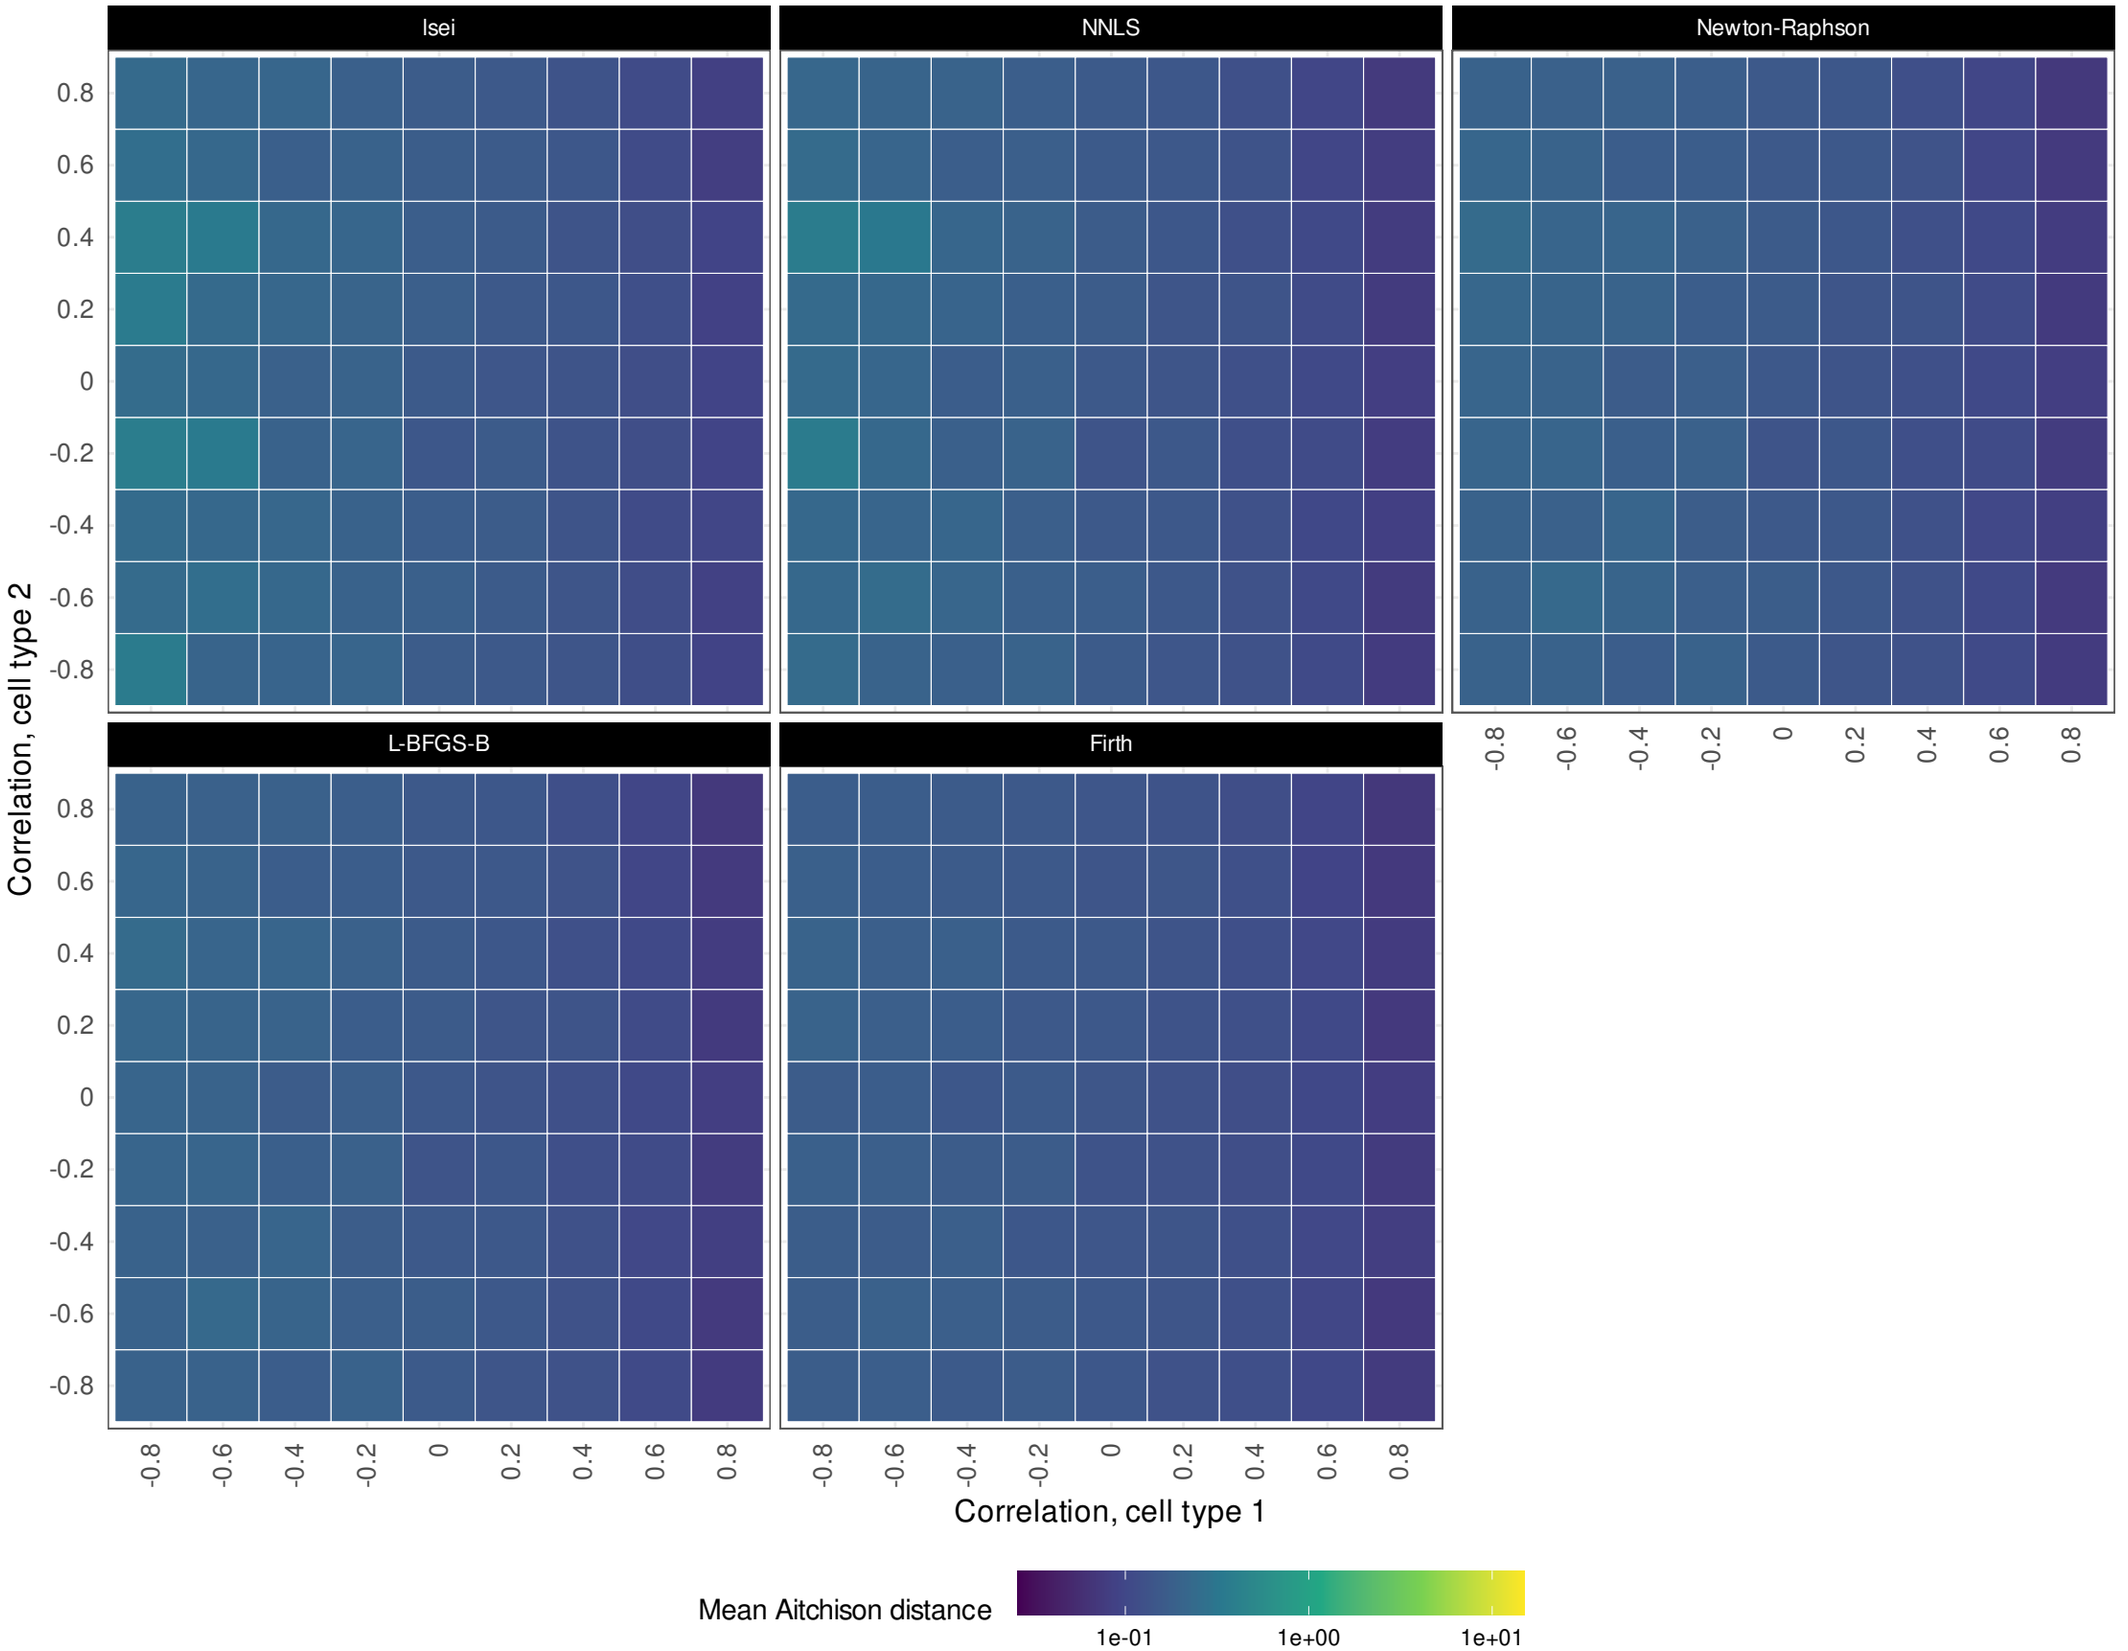

large centroid gap / heteroscedastic / balanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

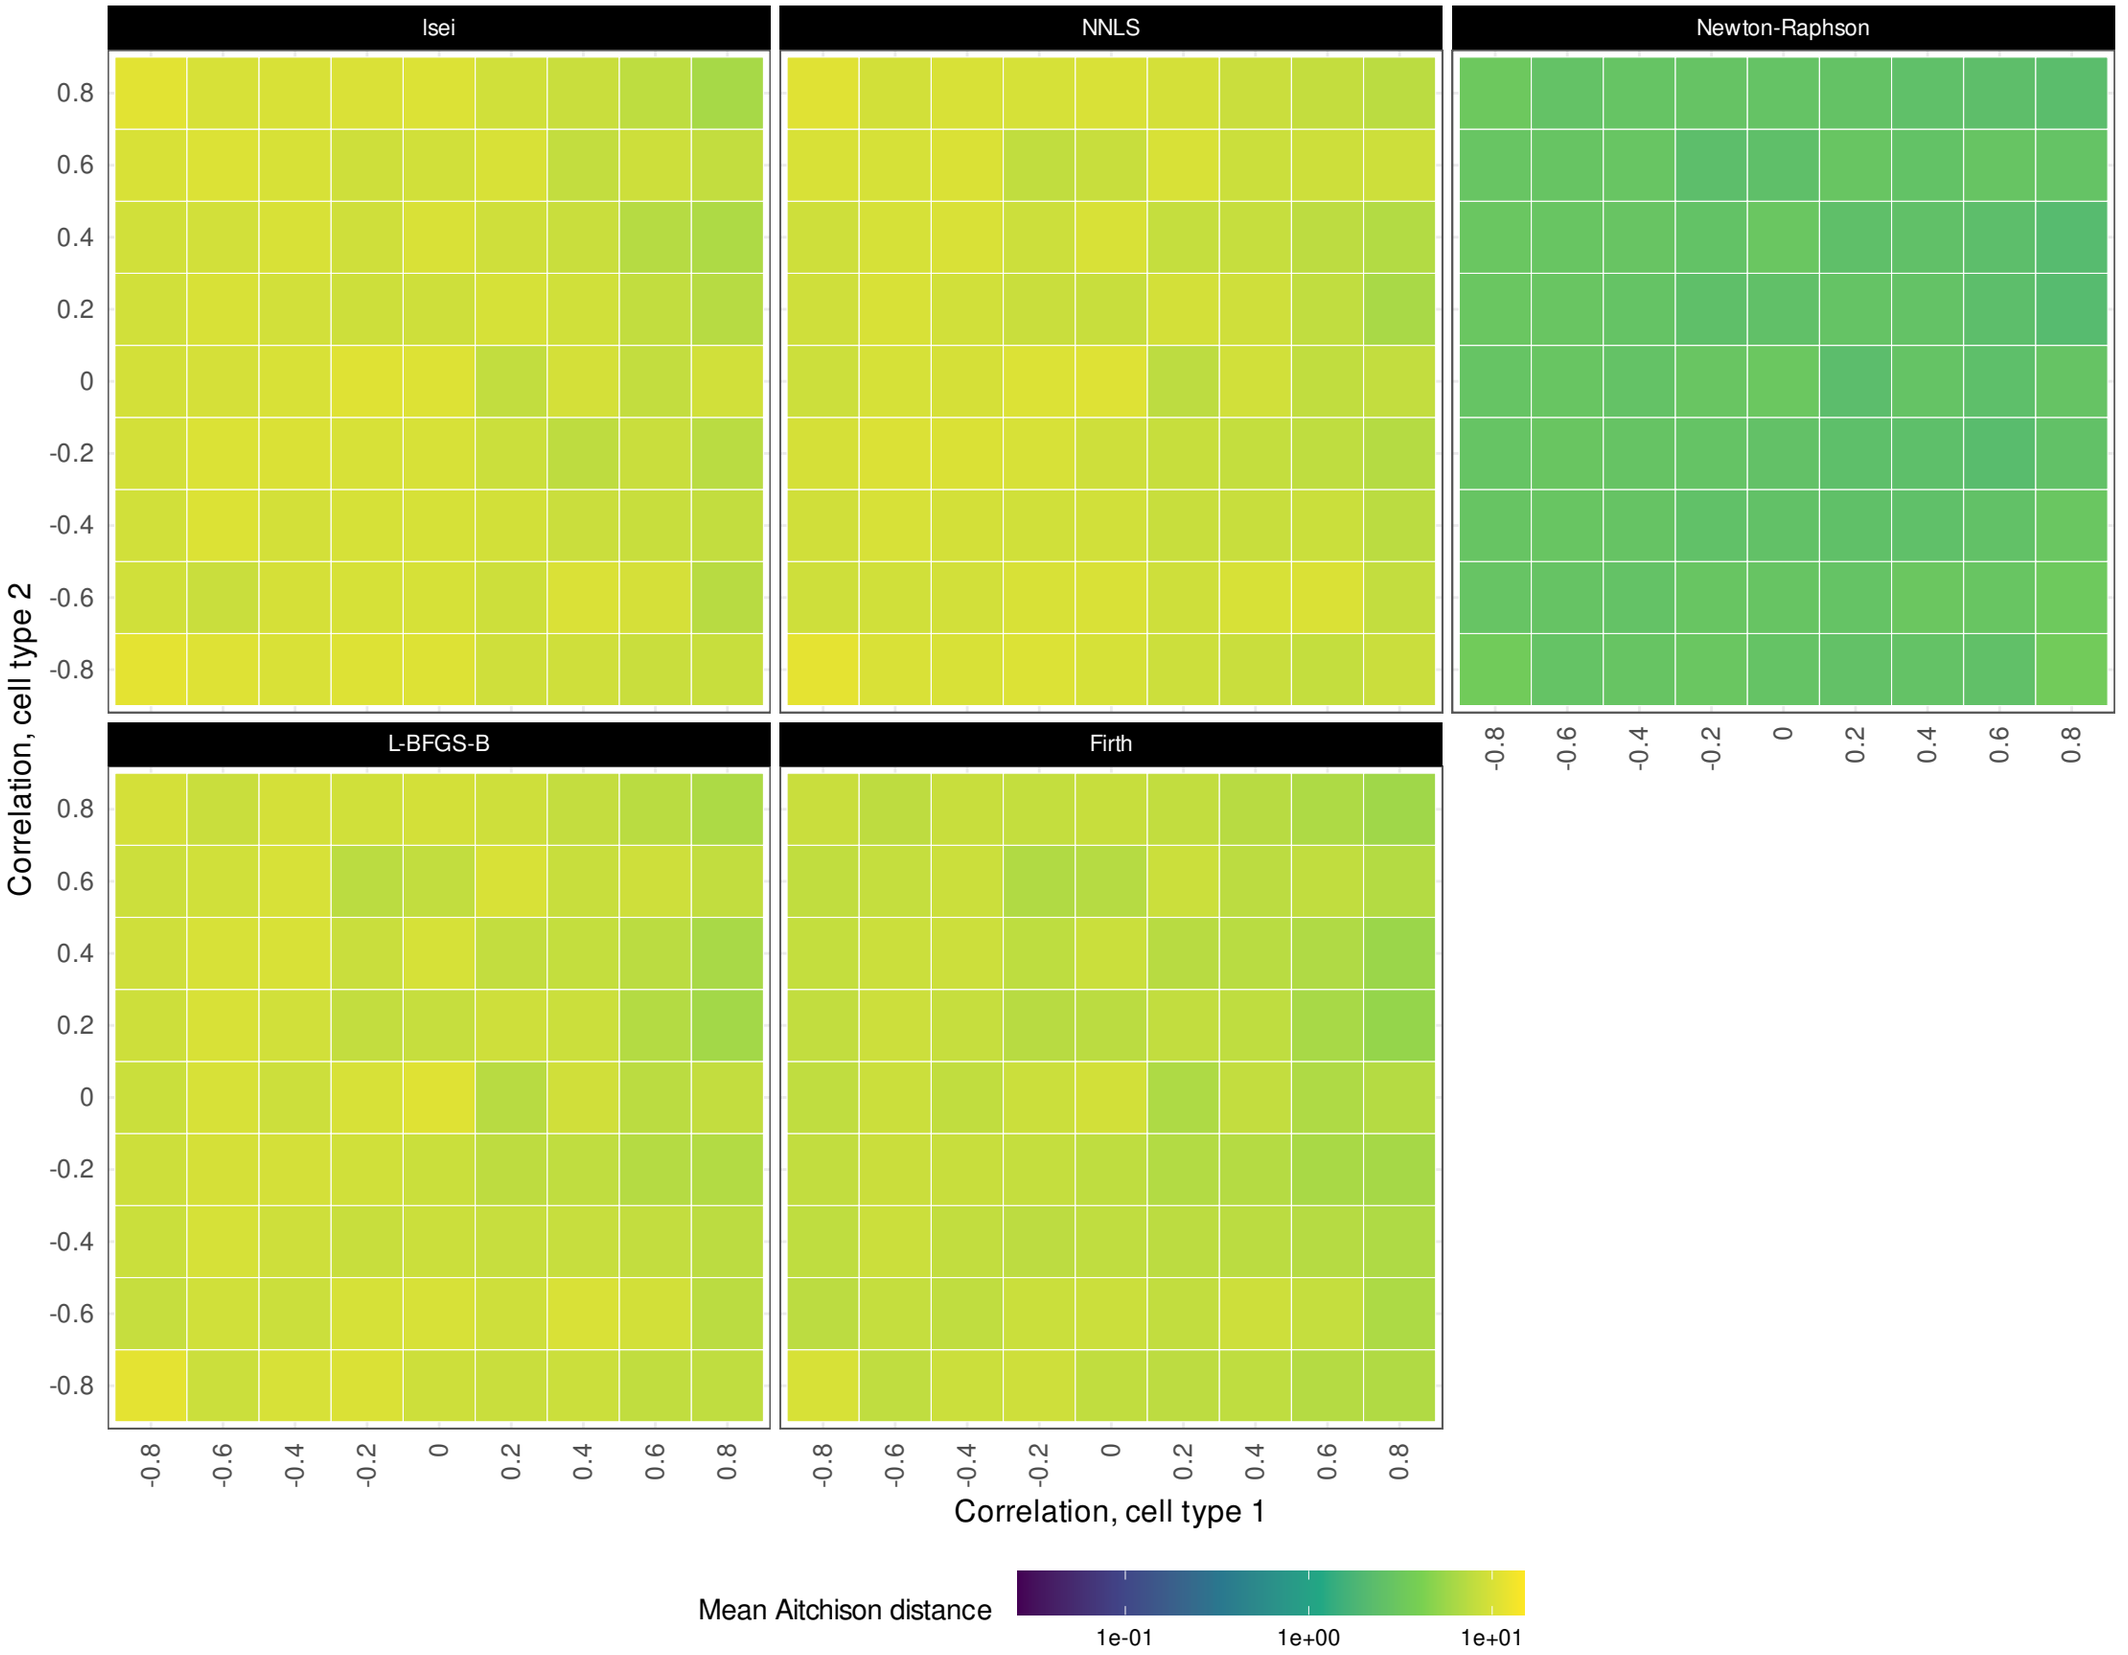

large centroid gap / heteroscedastic / moderately unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

Mean Aitchison distance of every method

large centroid gap / heteroscedastic / highly unbalanced

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
