First-order optimality of every estimate

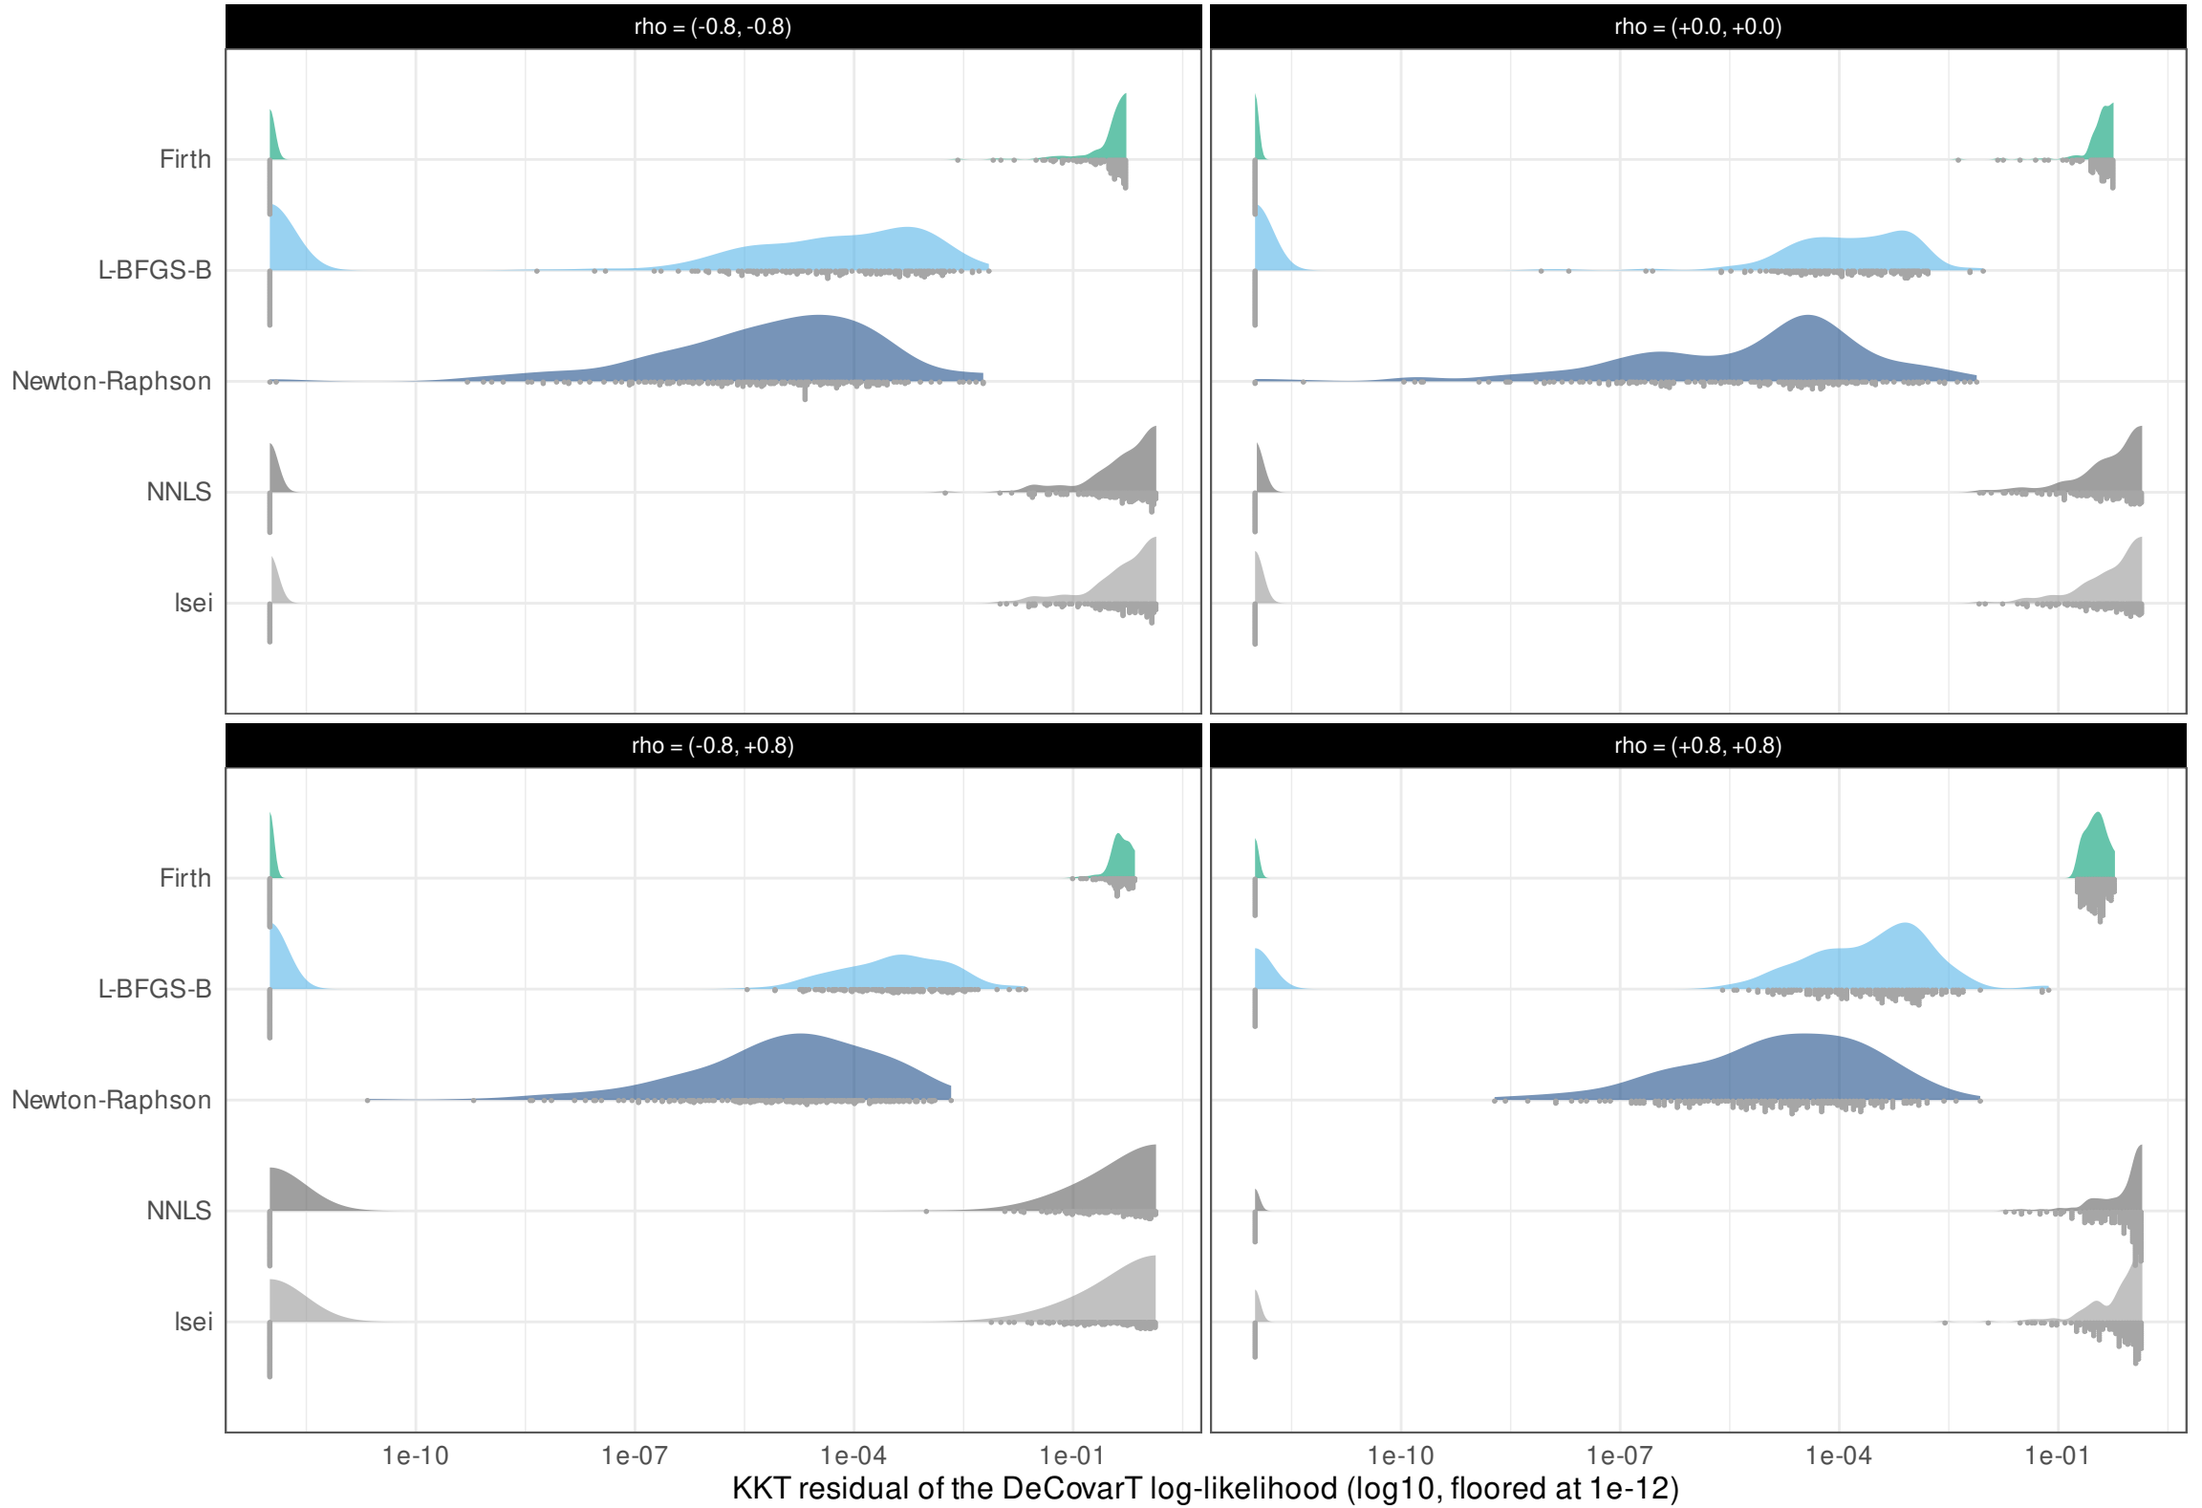

small centroid gap / homoscedastic / balanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

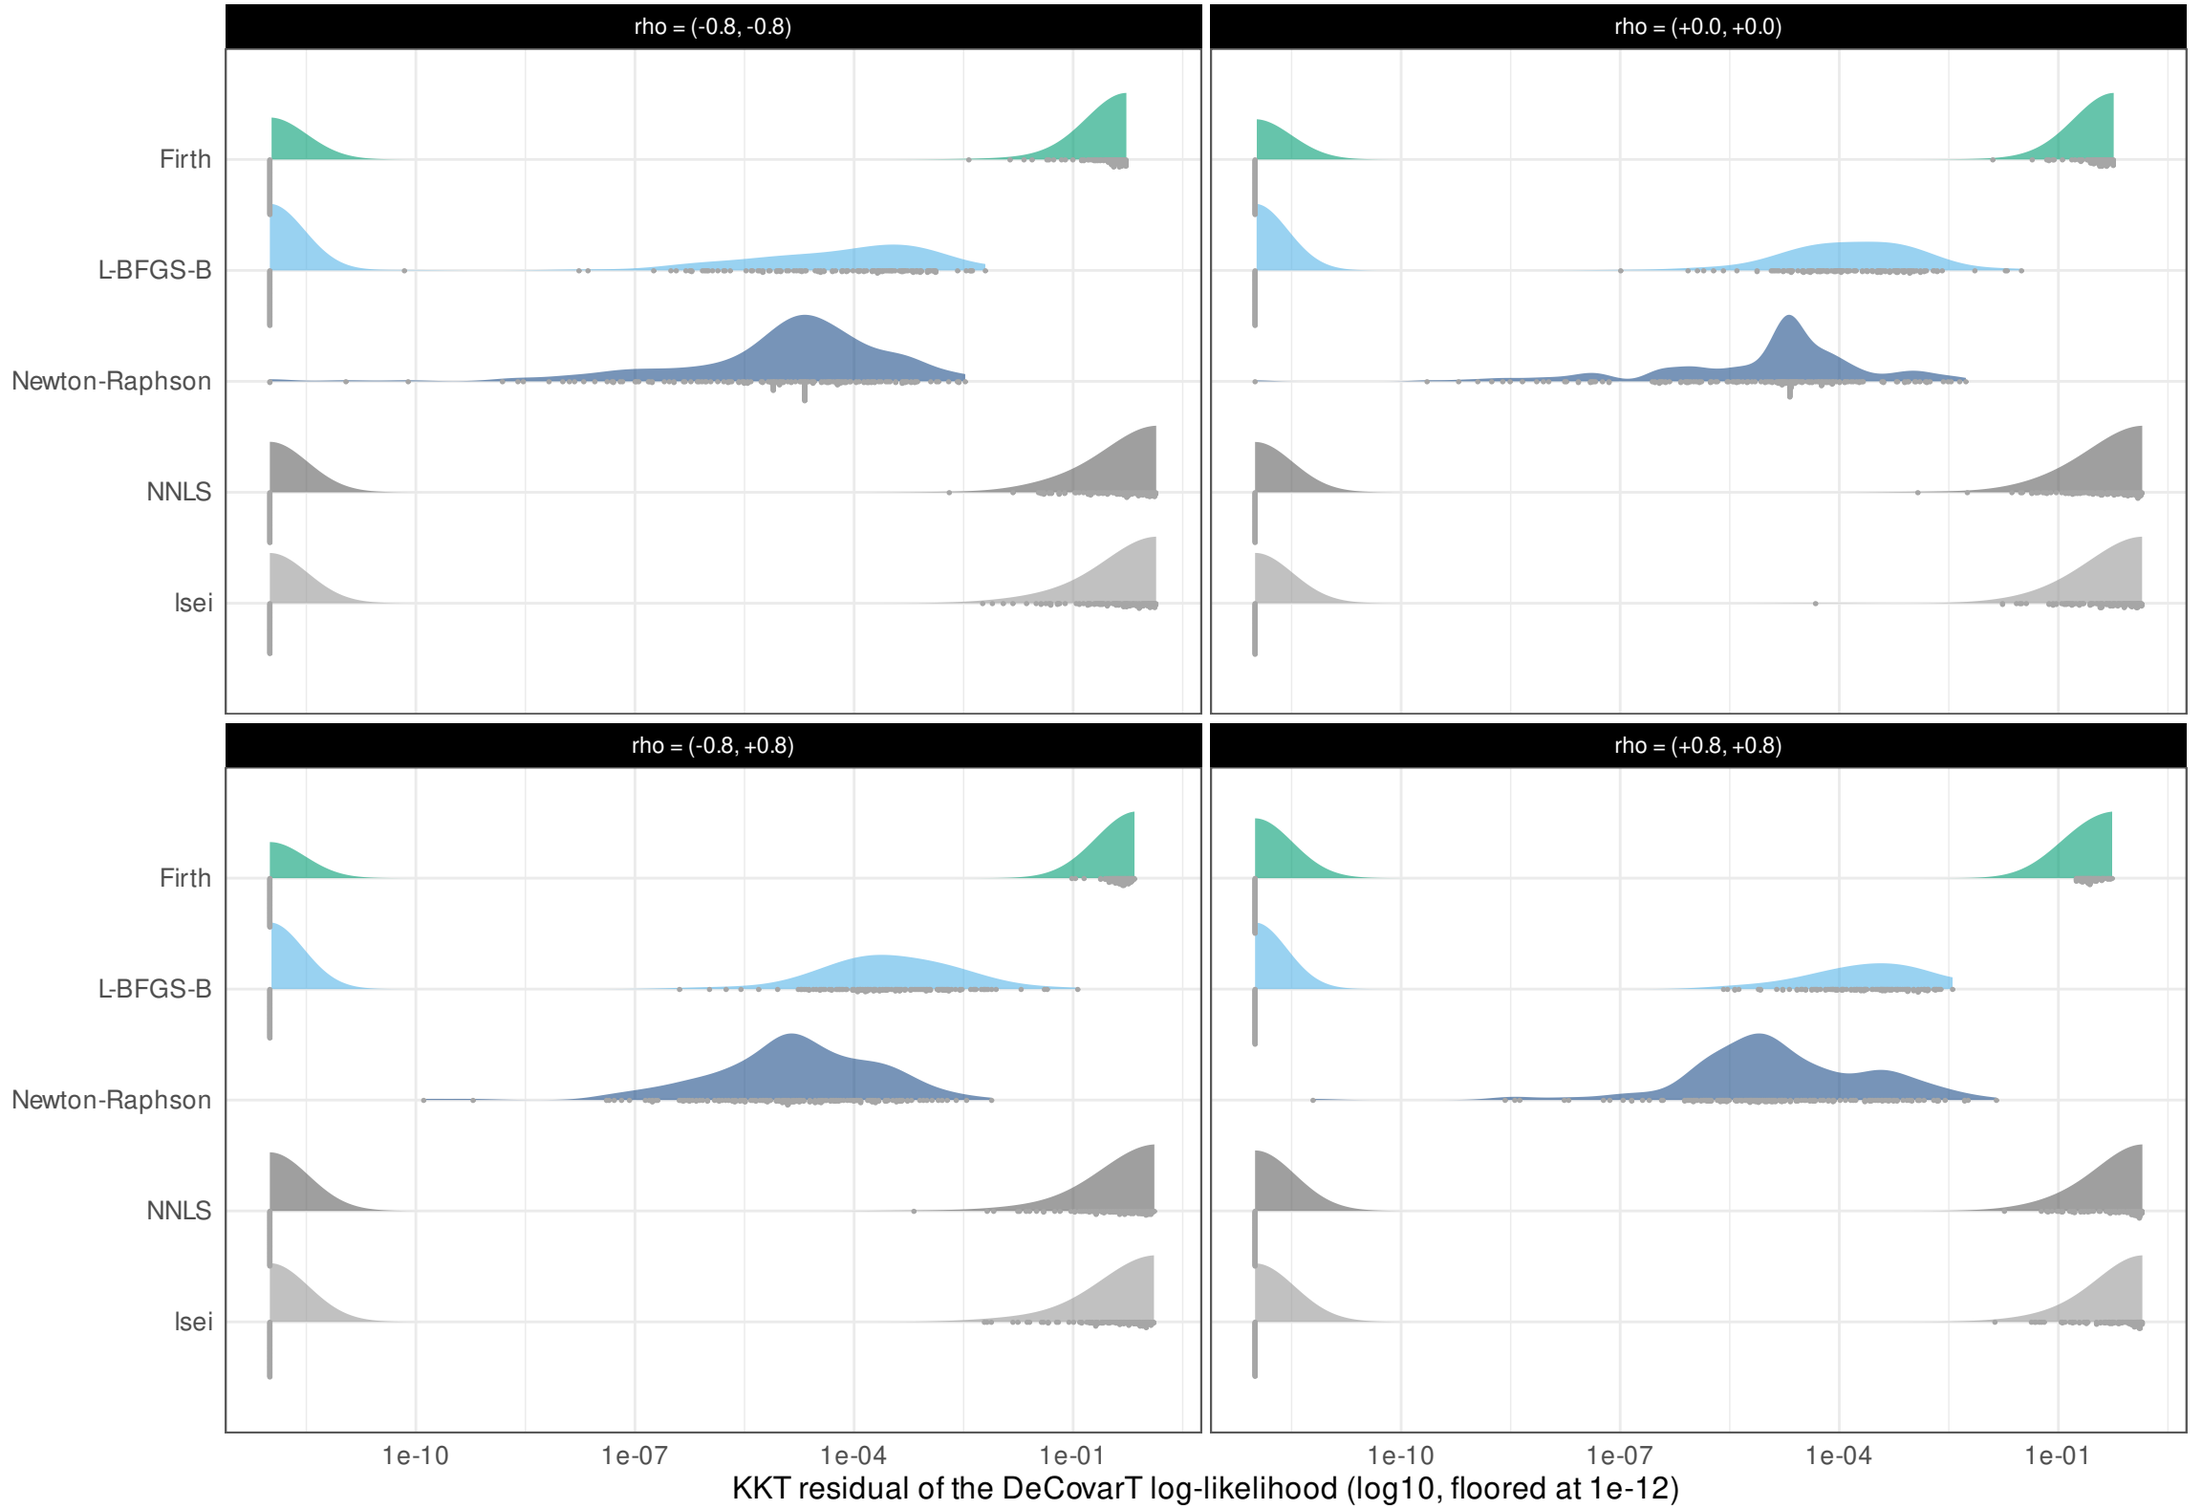

small centroid gap / homoscedastic / moderately unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

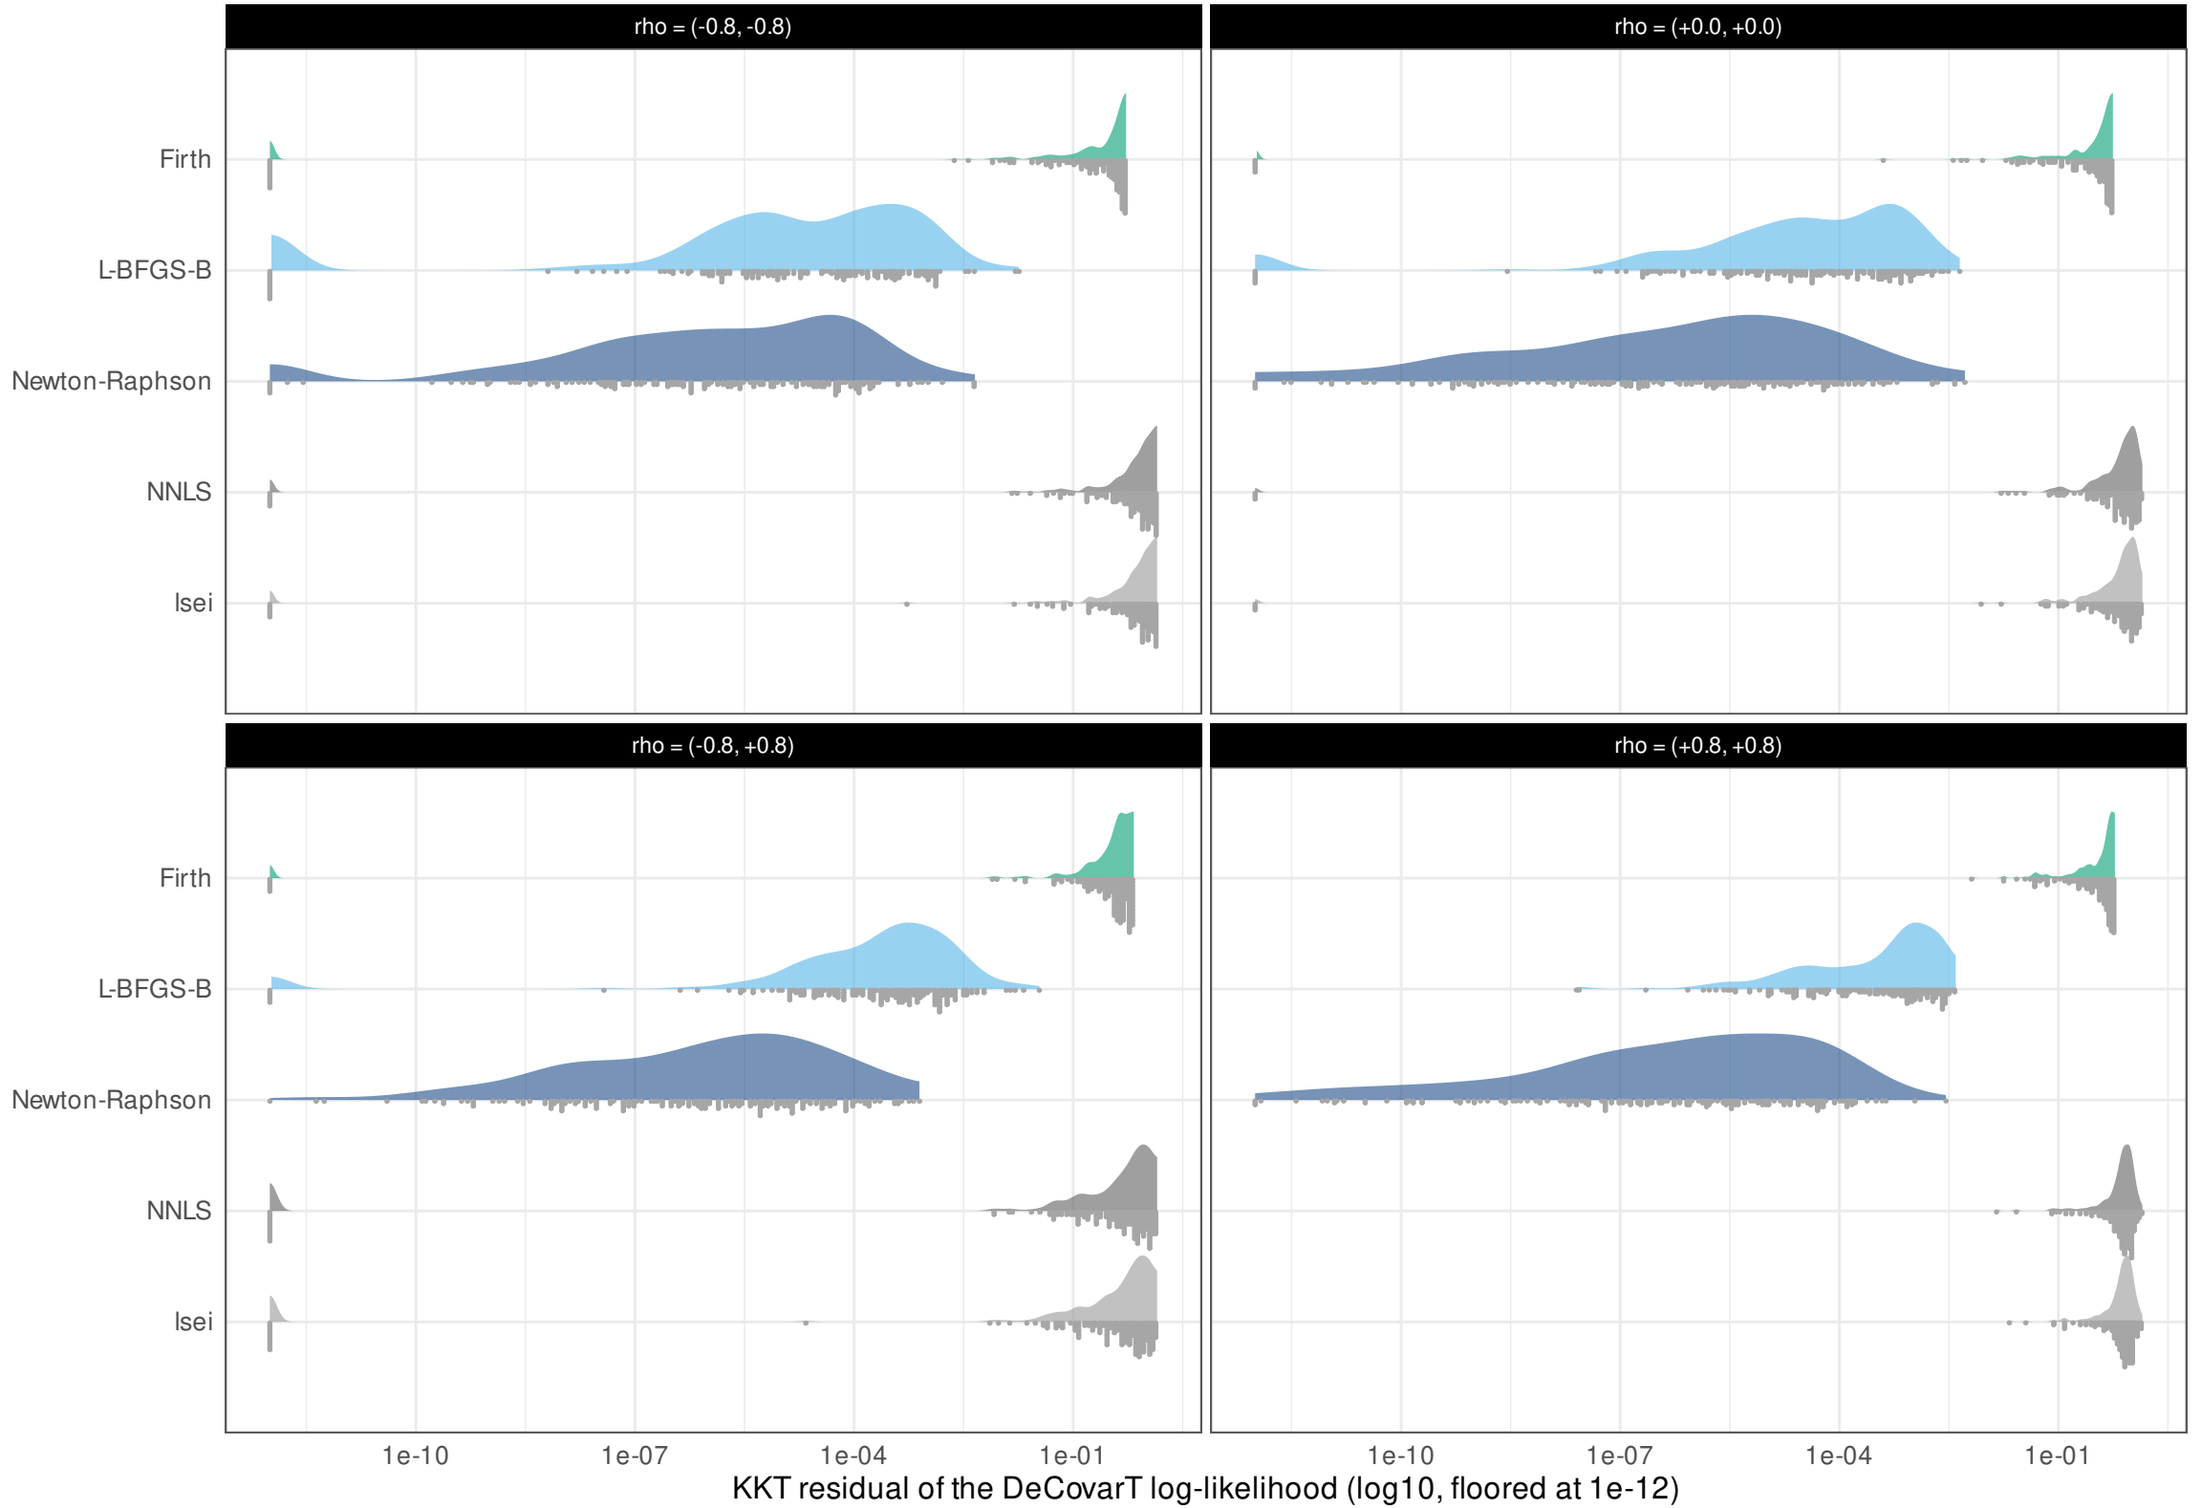

small centroid gap / homoscedastic / highly unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

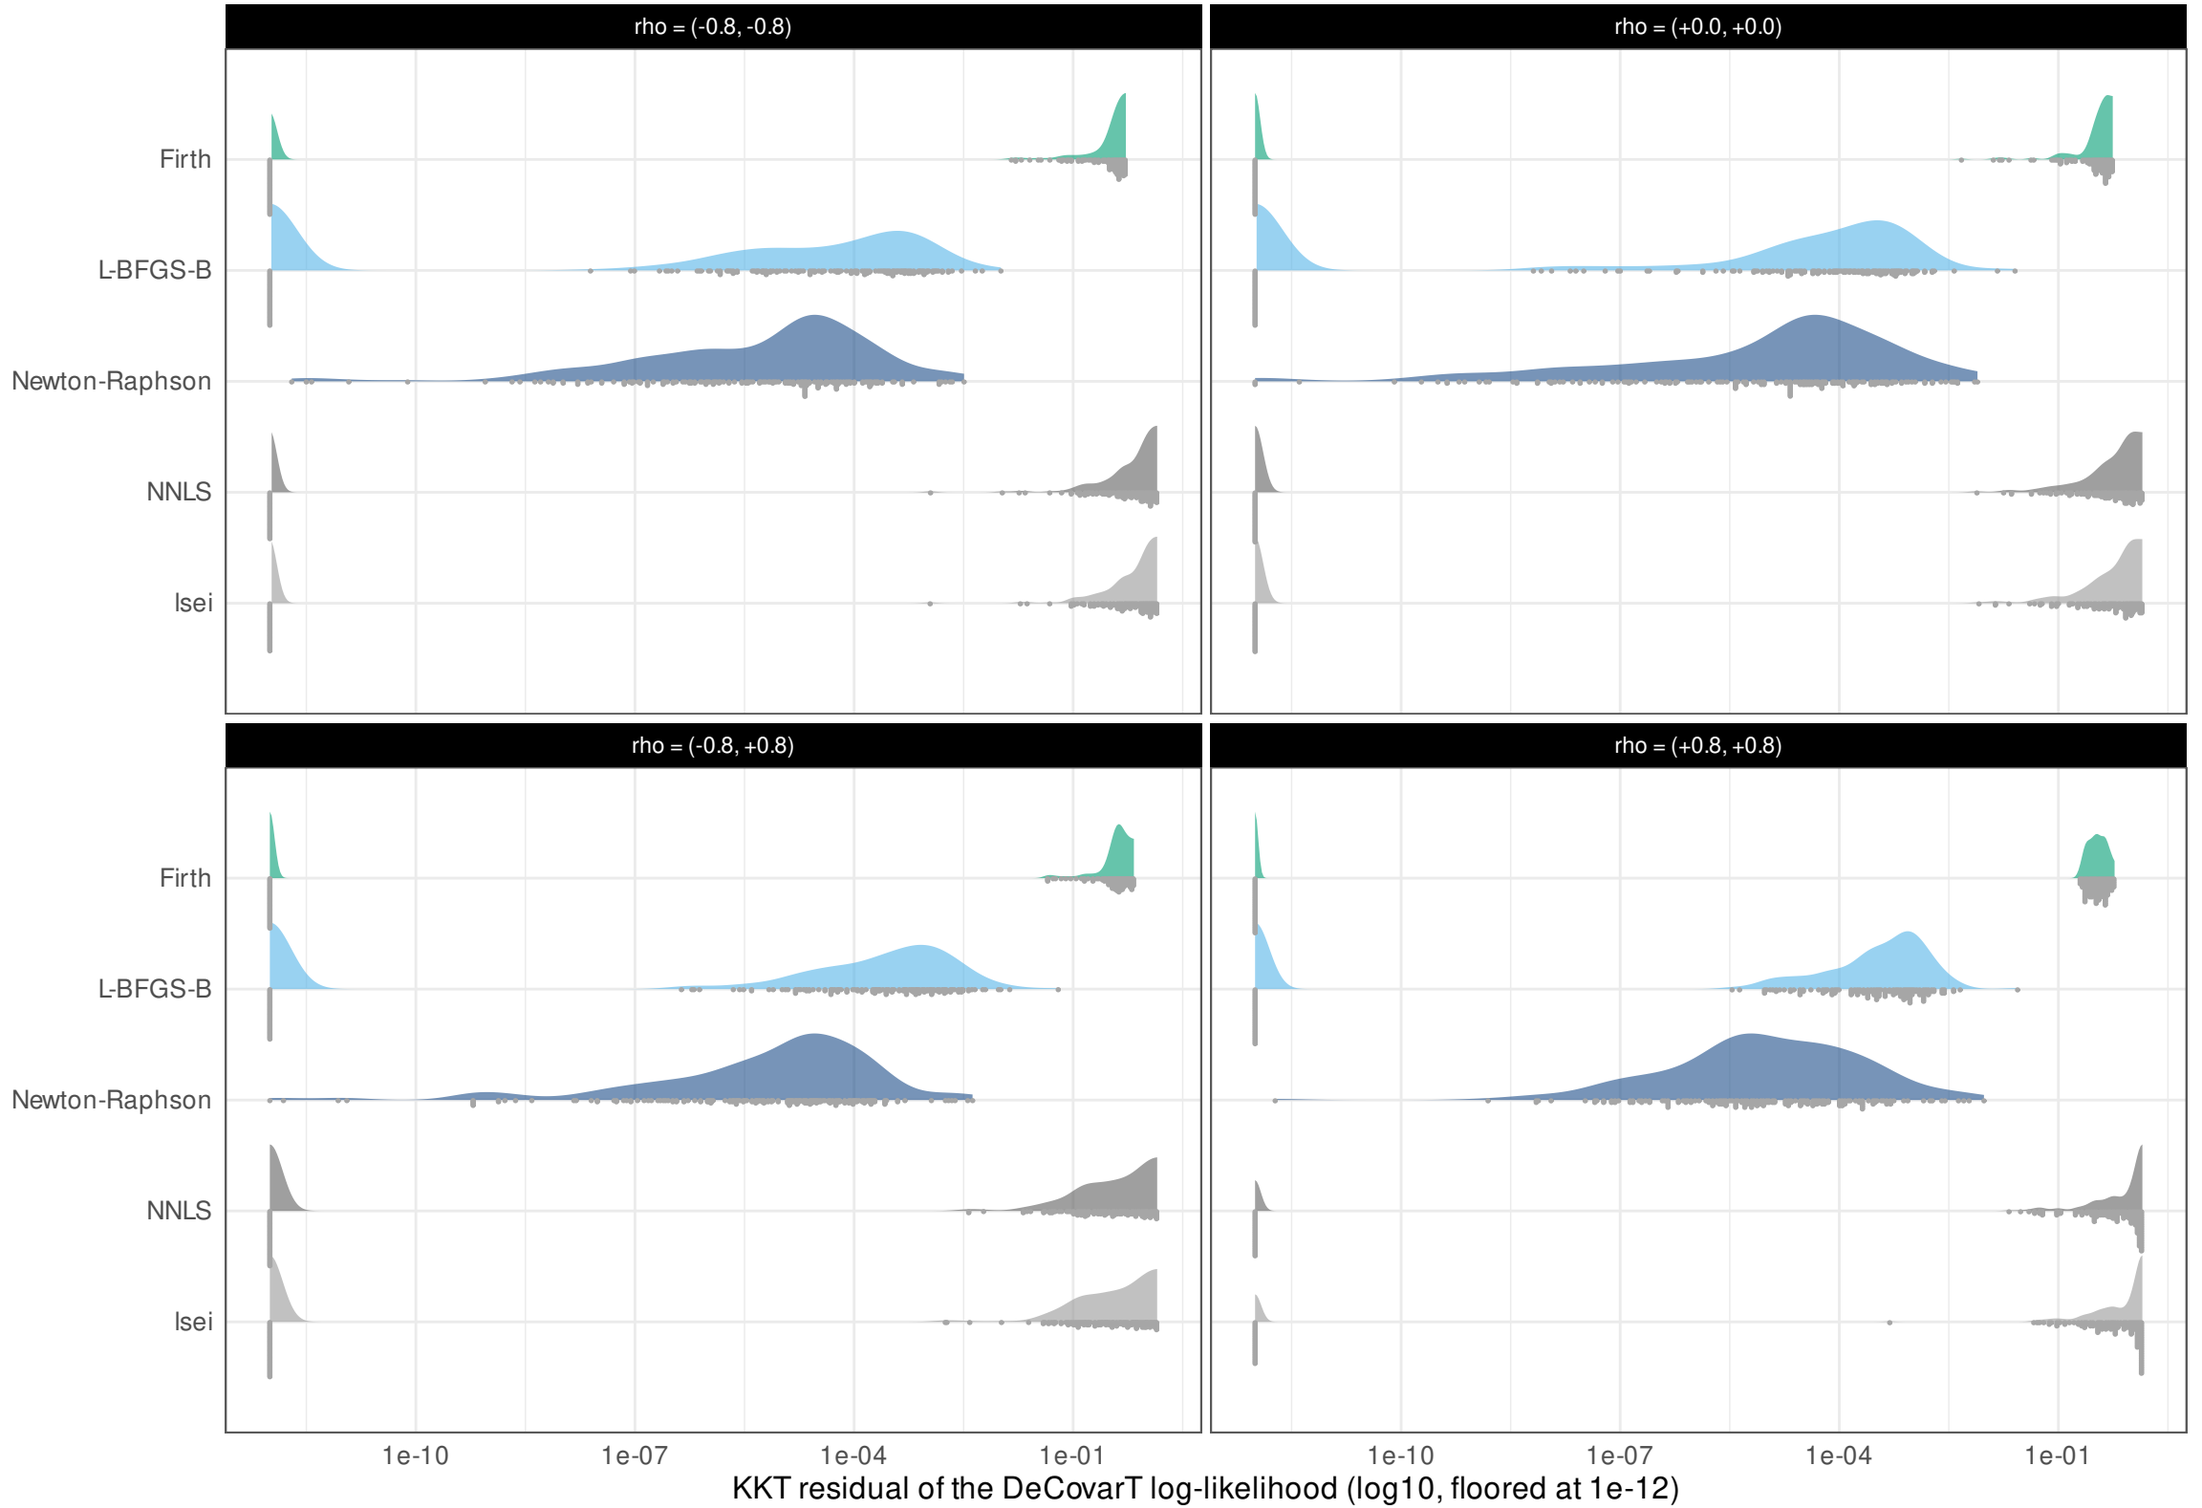

small centroid gap / heteroscedastic / balanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

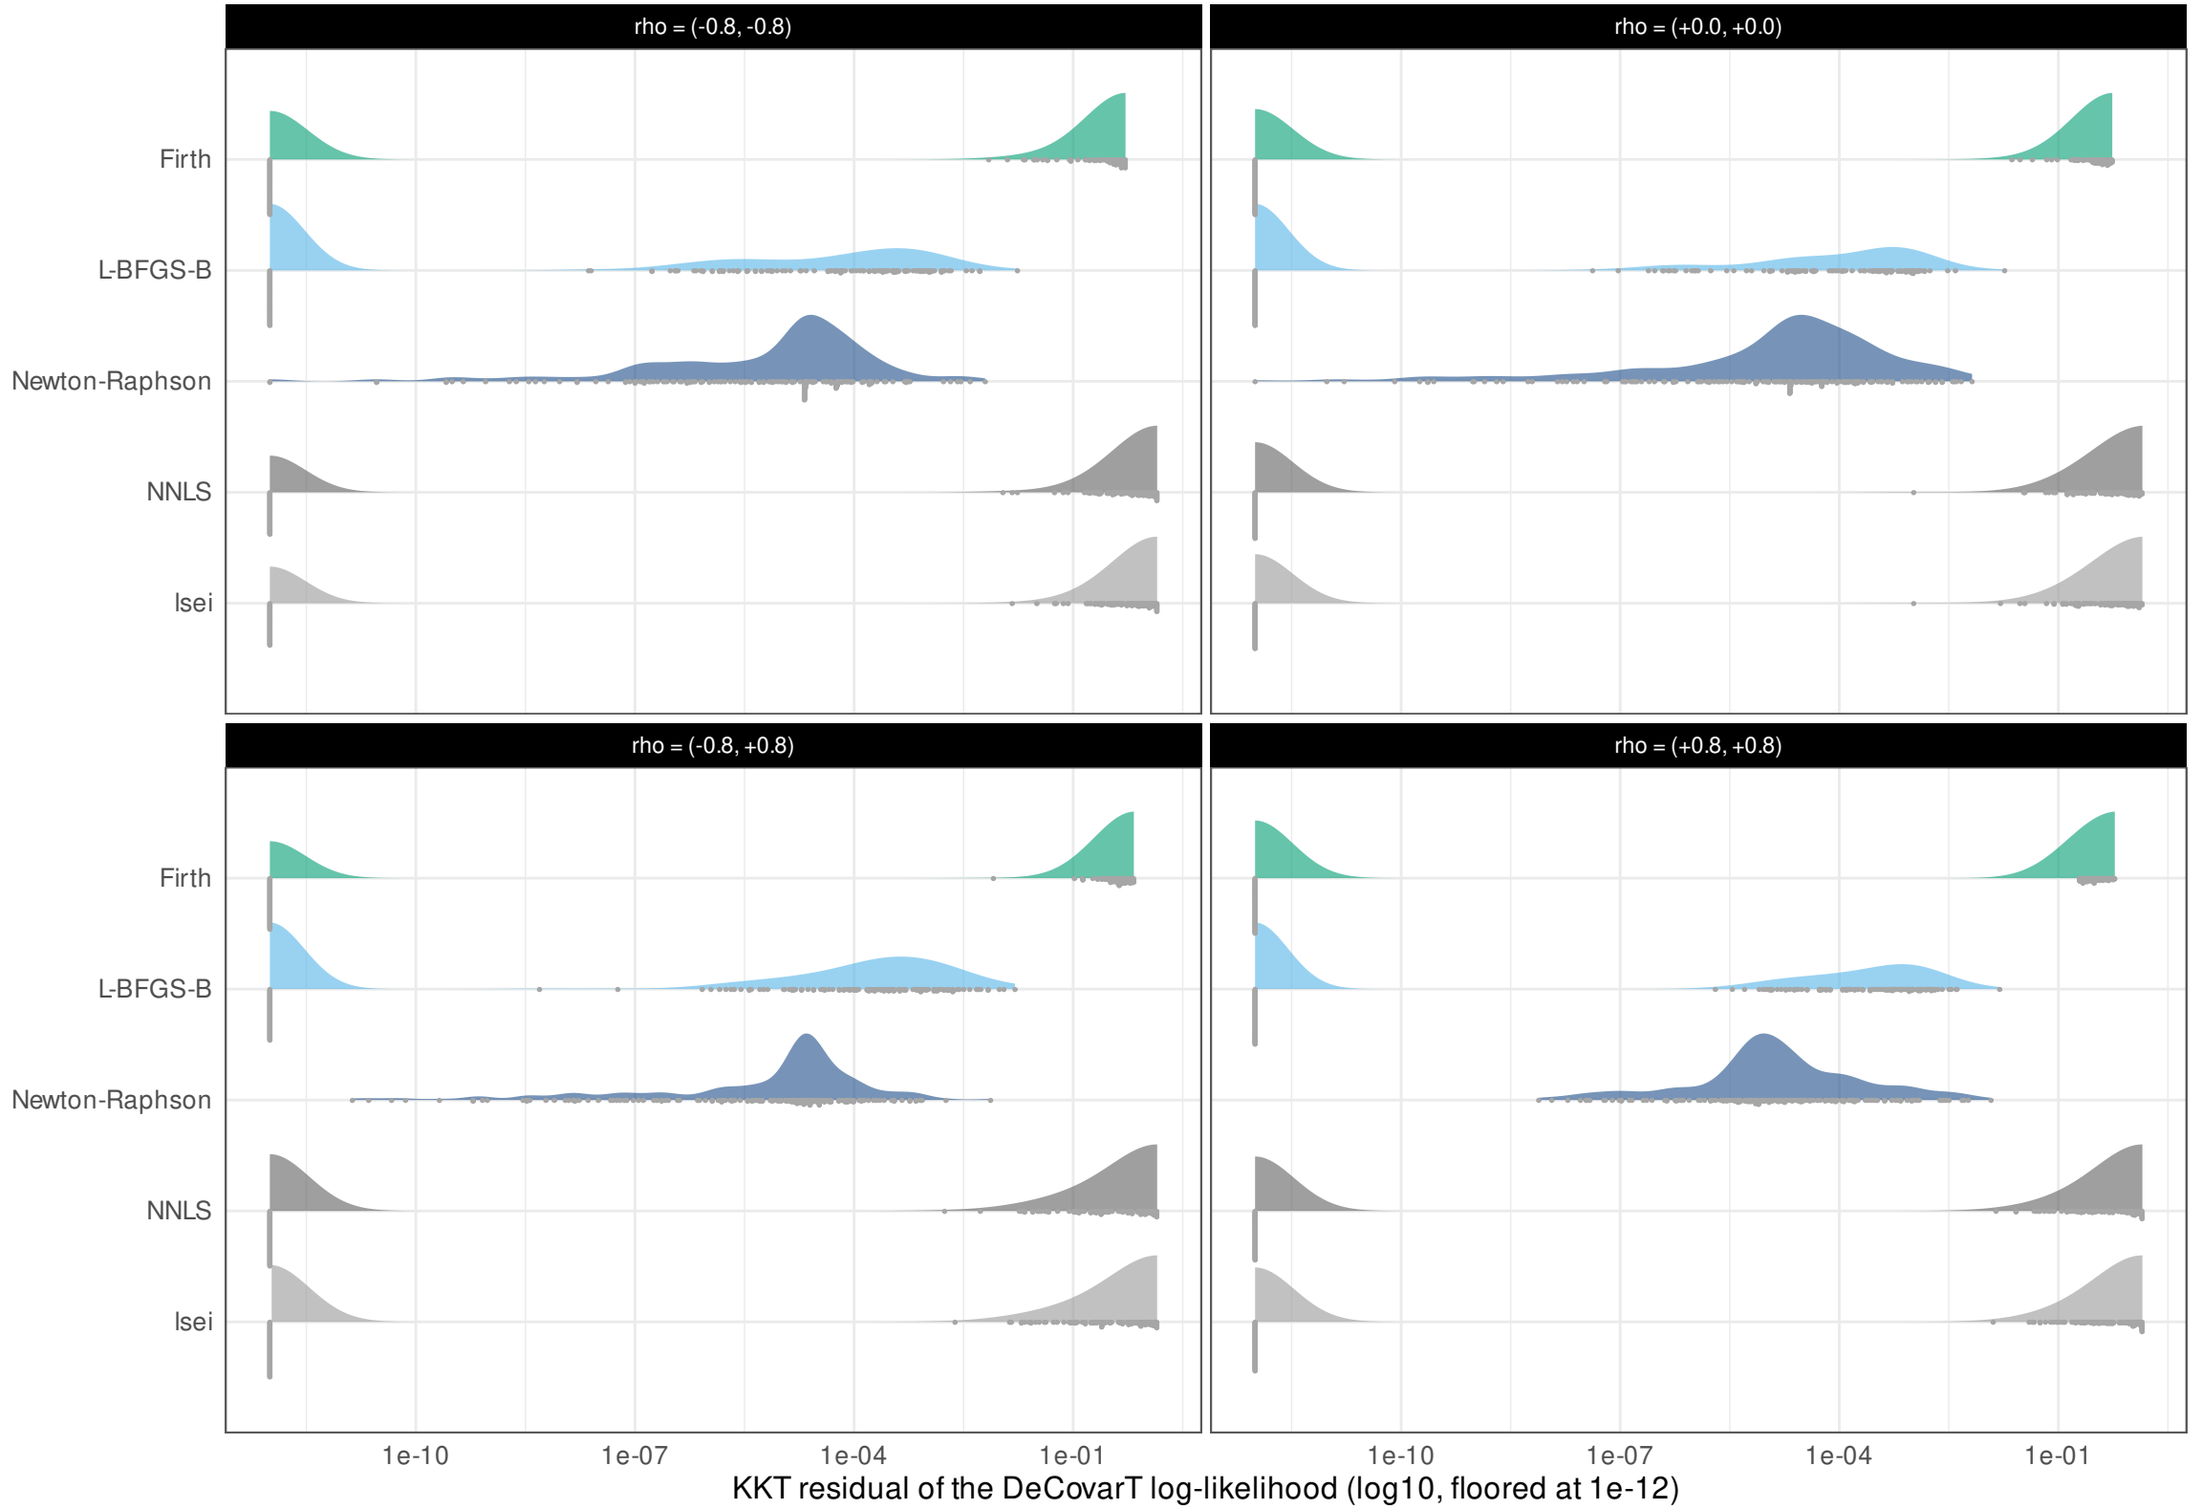

small centroid gap / heteroscedastic / moderately unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

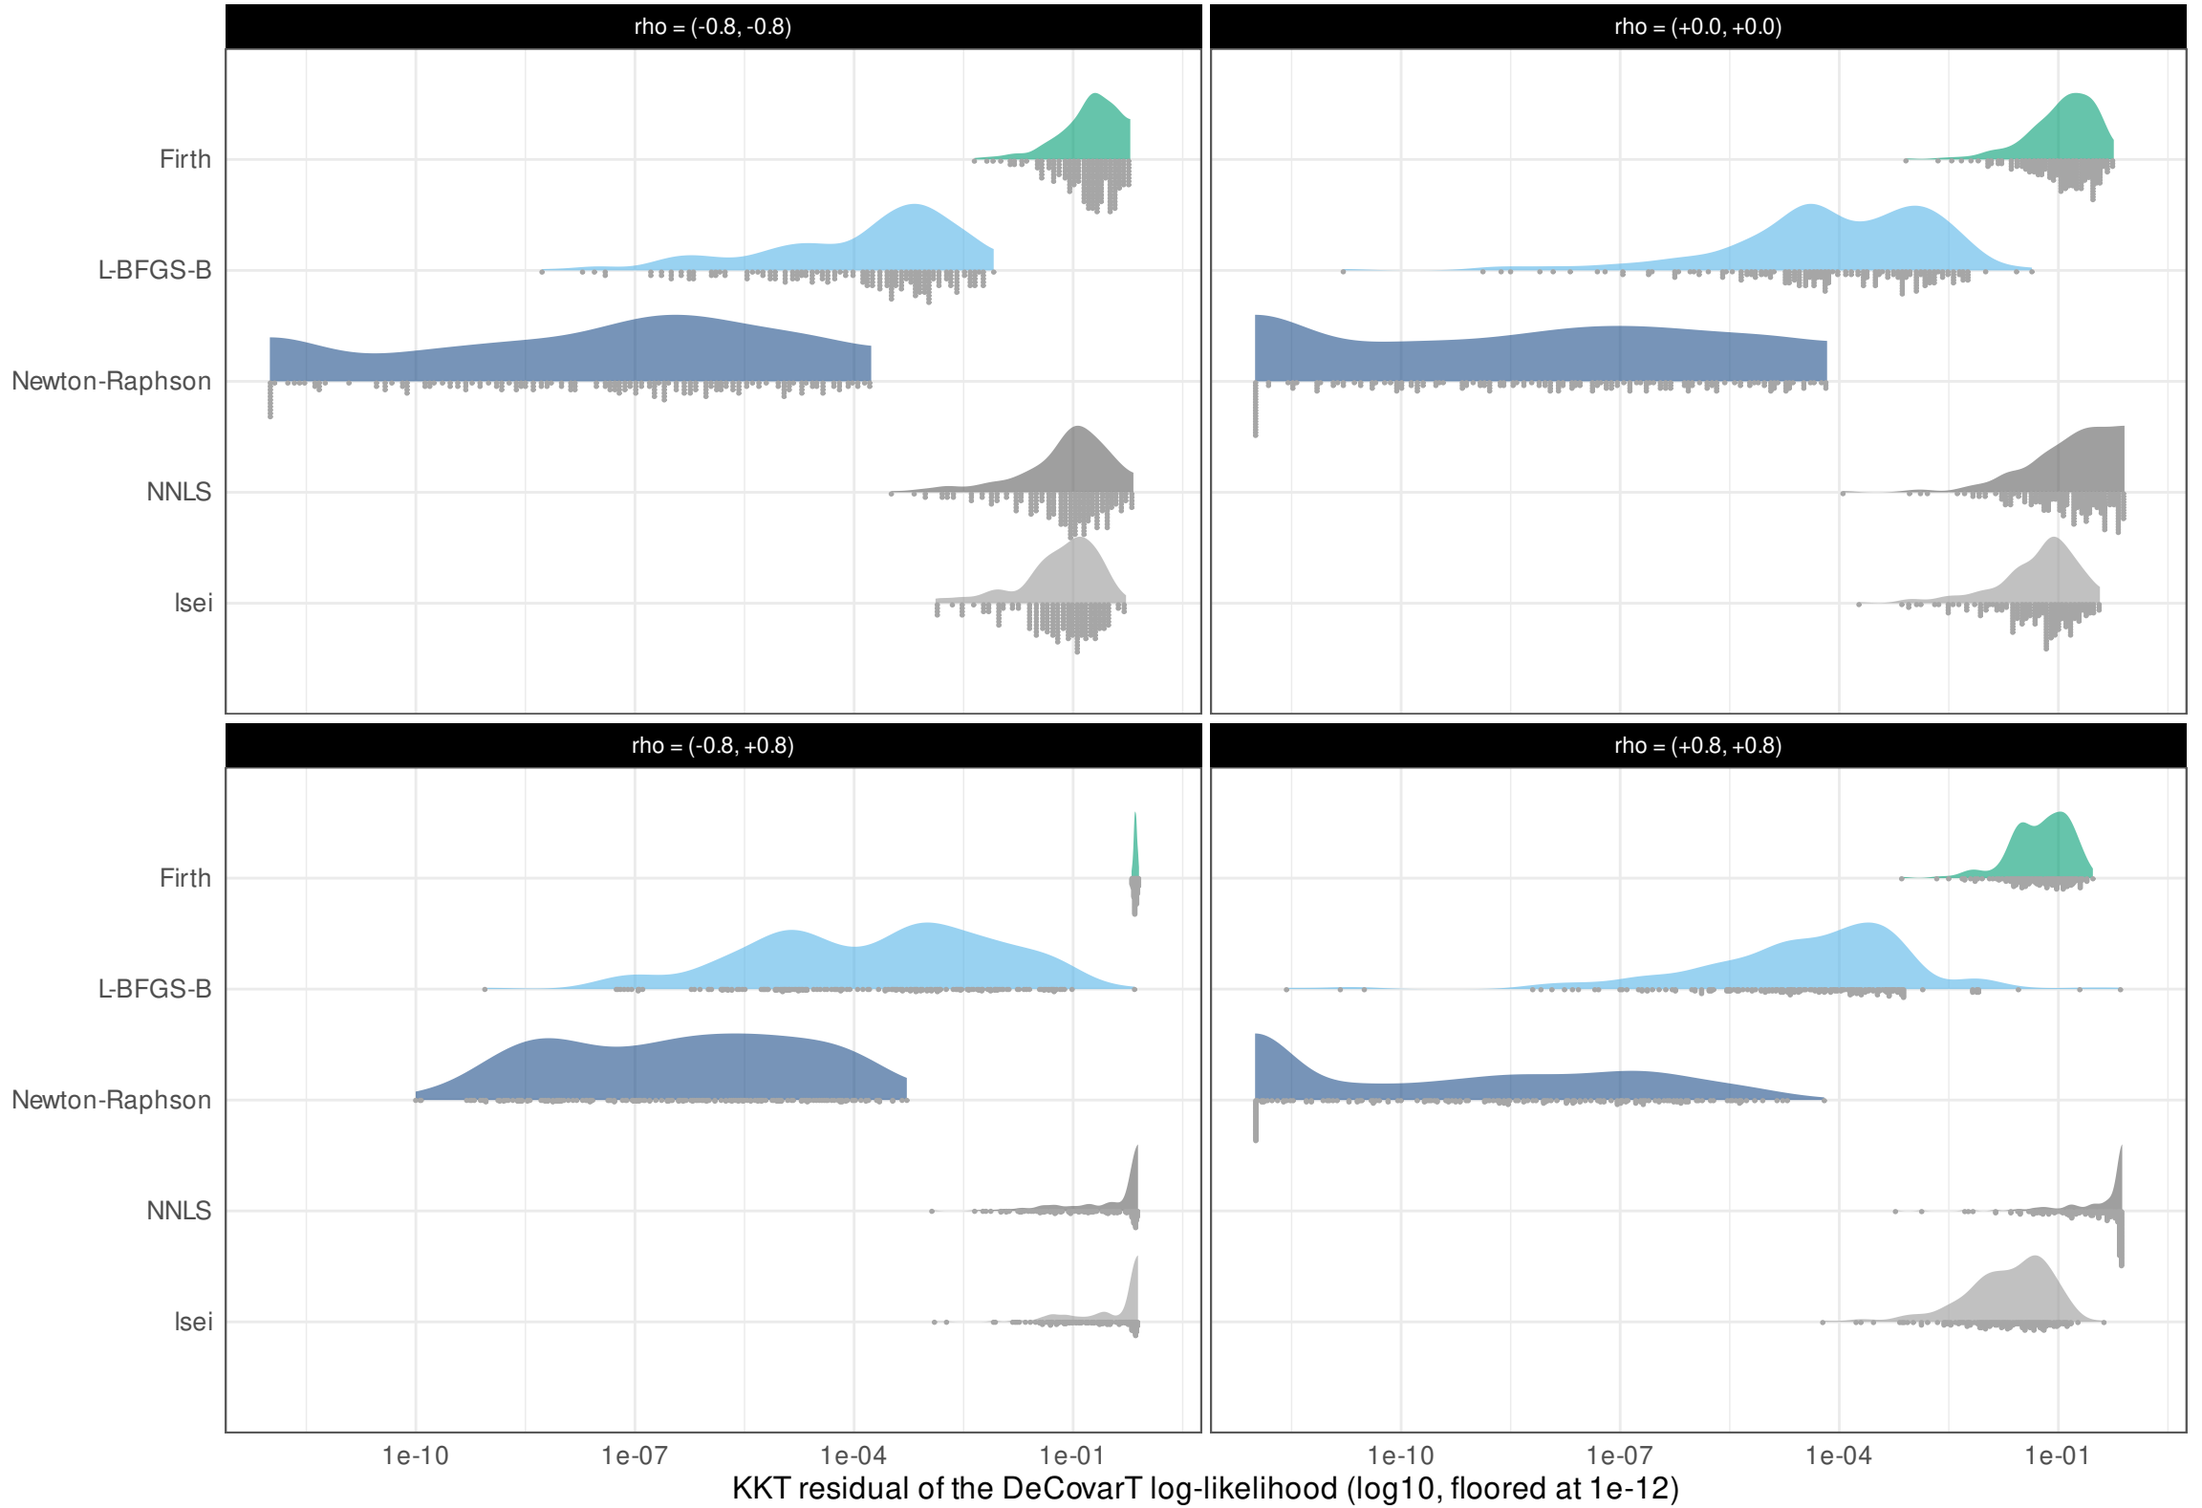

small centroid gap / heteroscedastic / highly unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

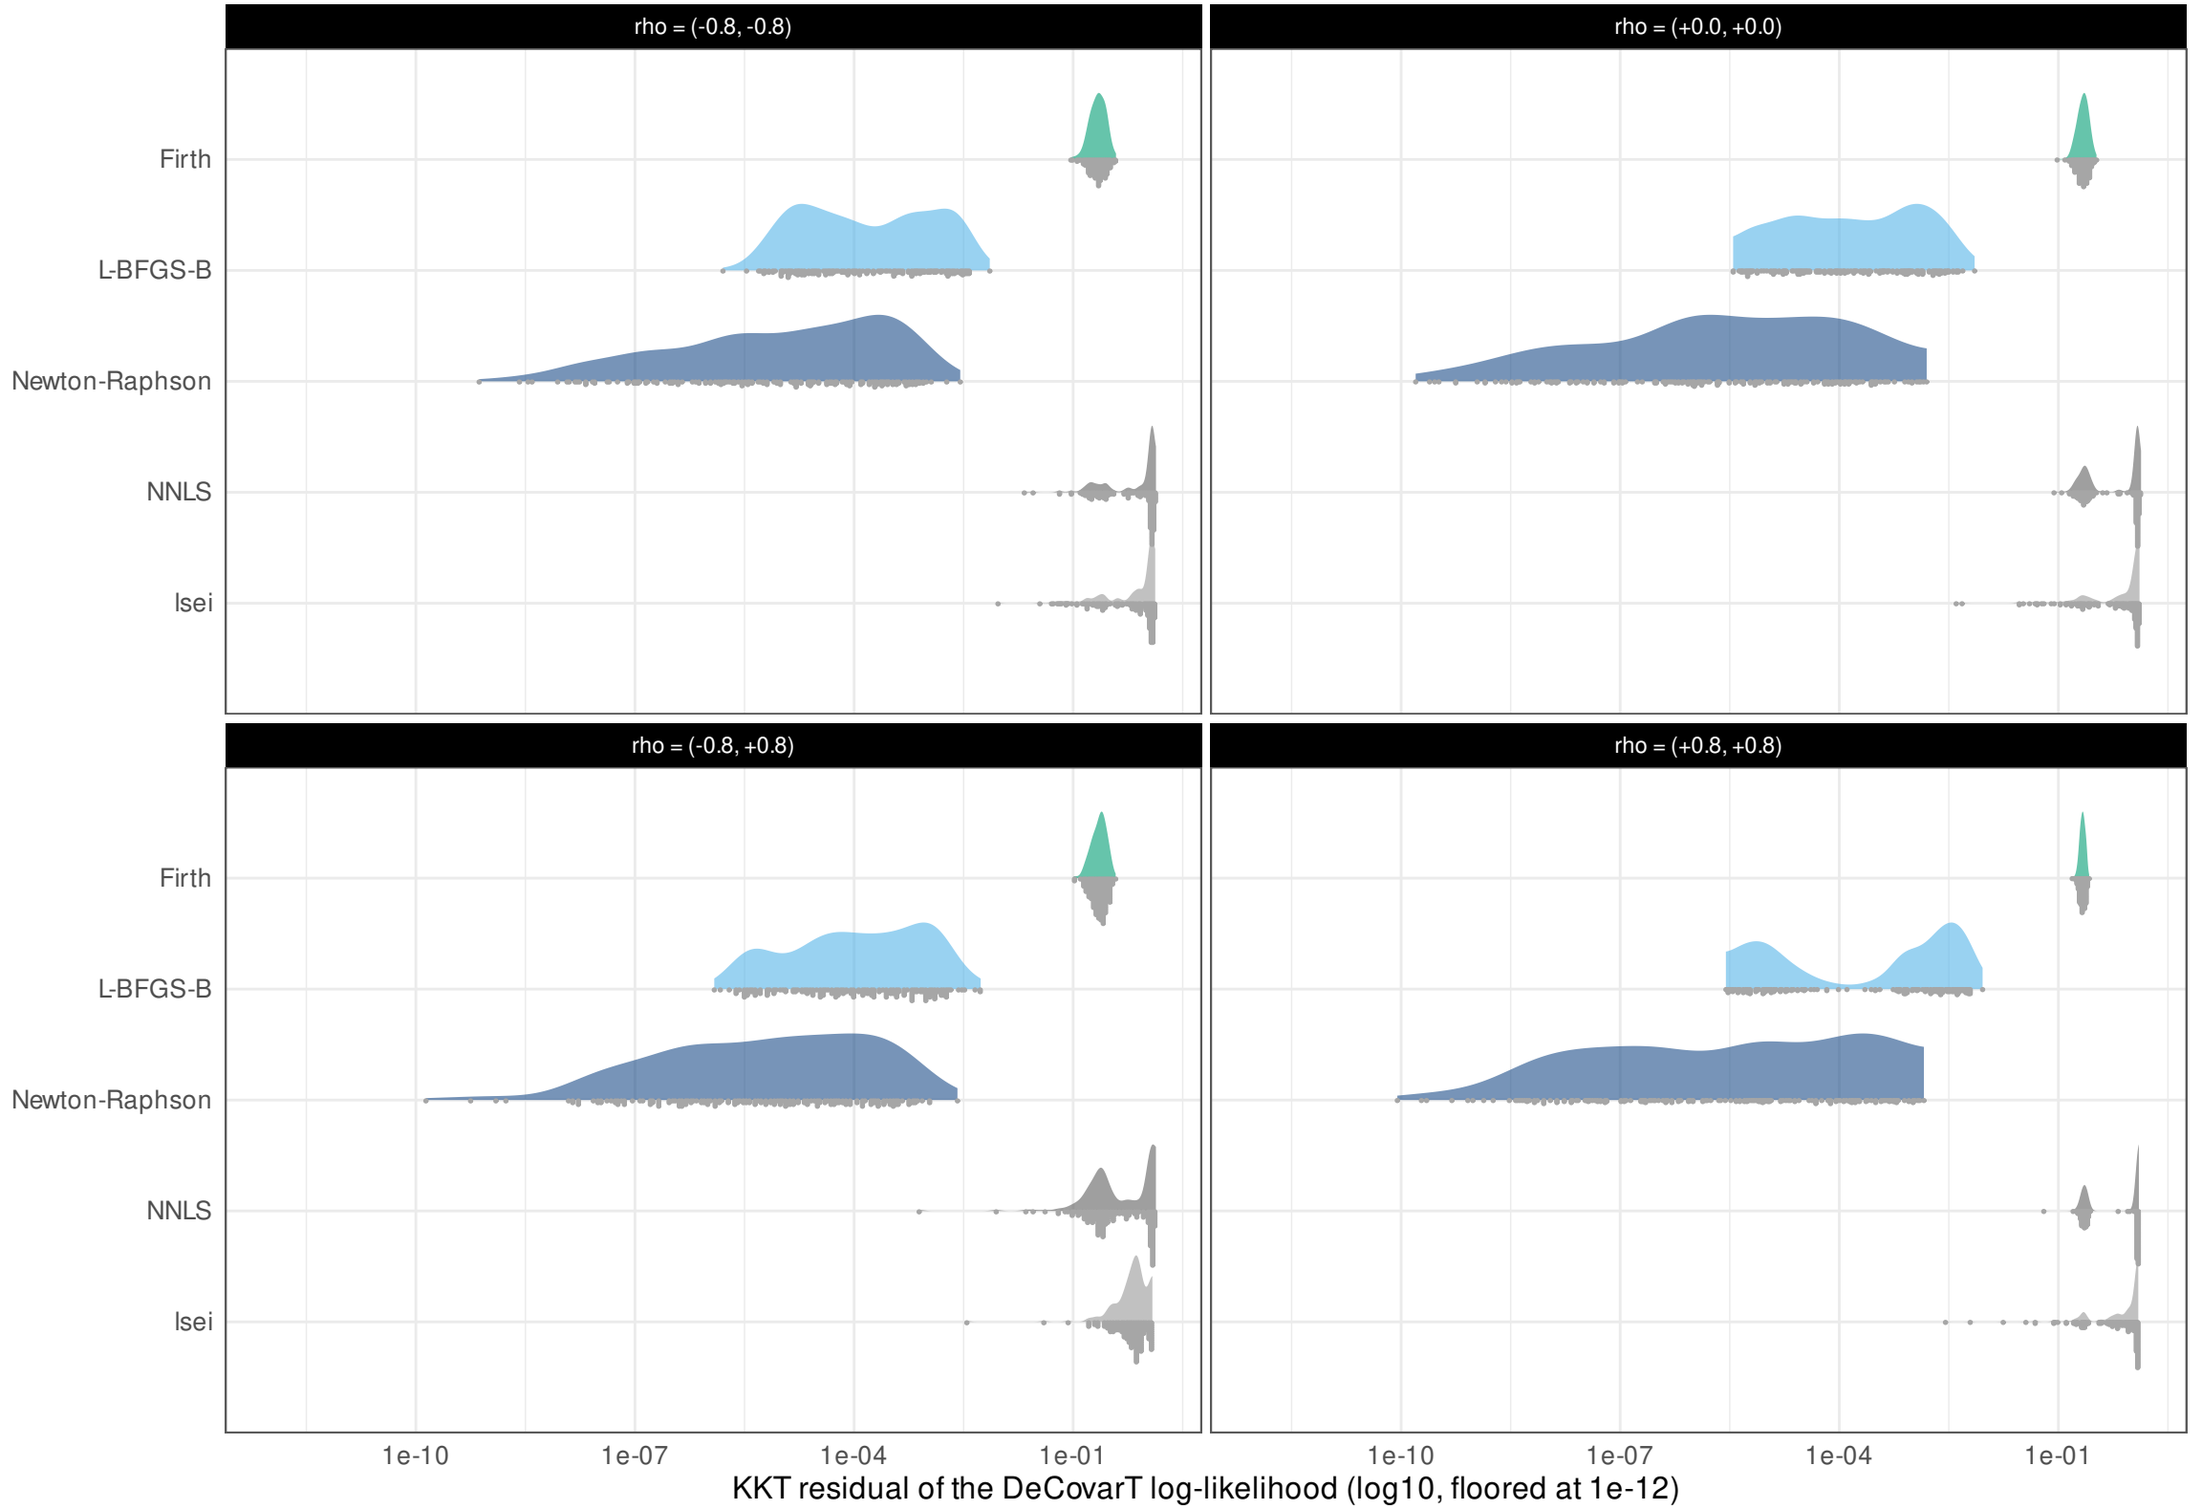

large centroid gap / homoscedastic / balanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

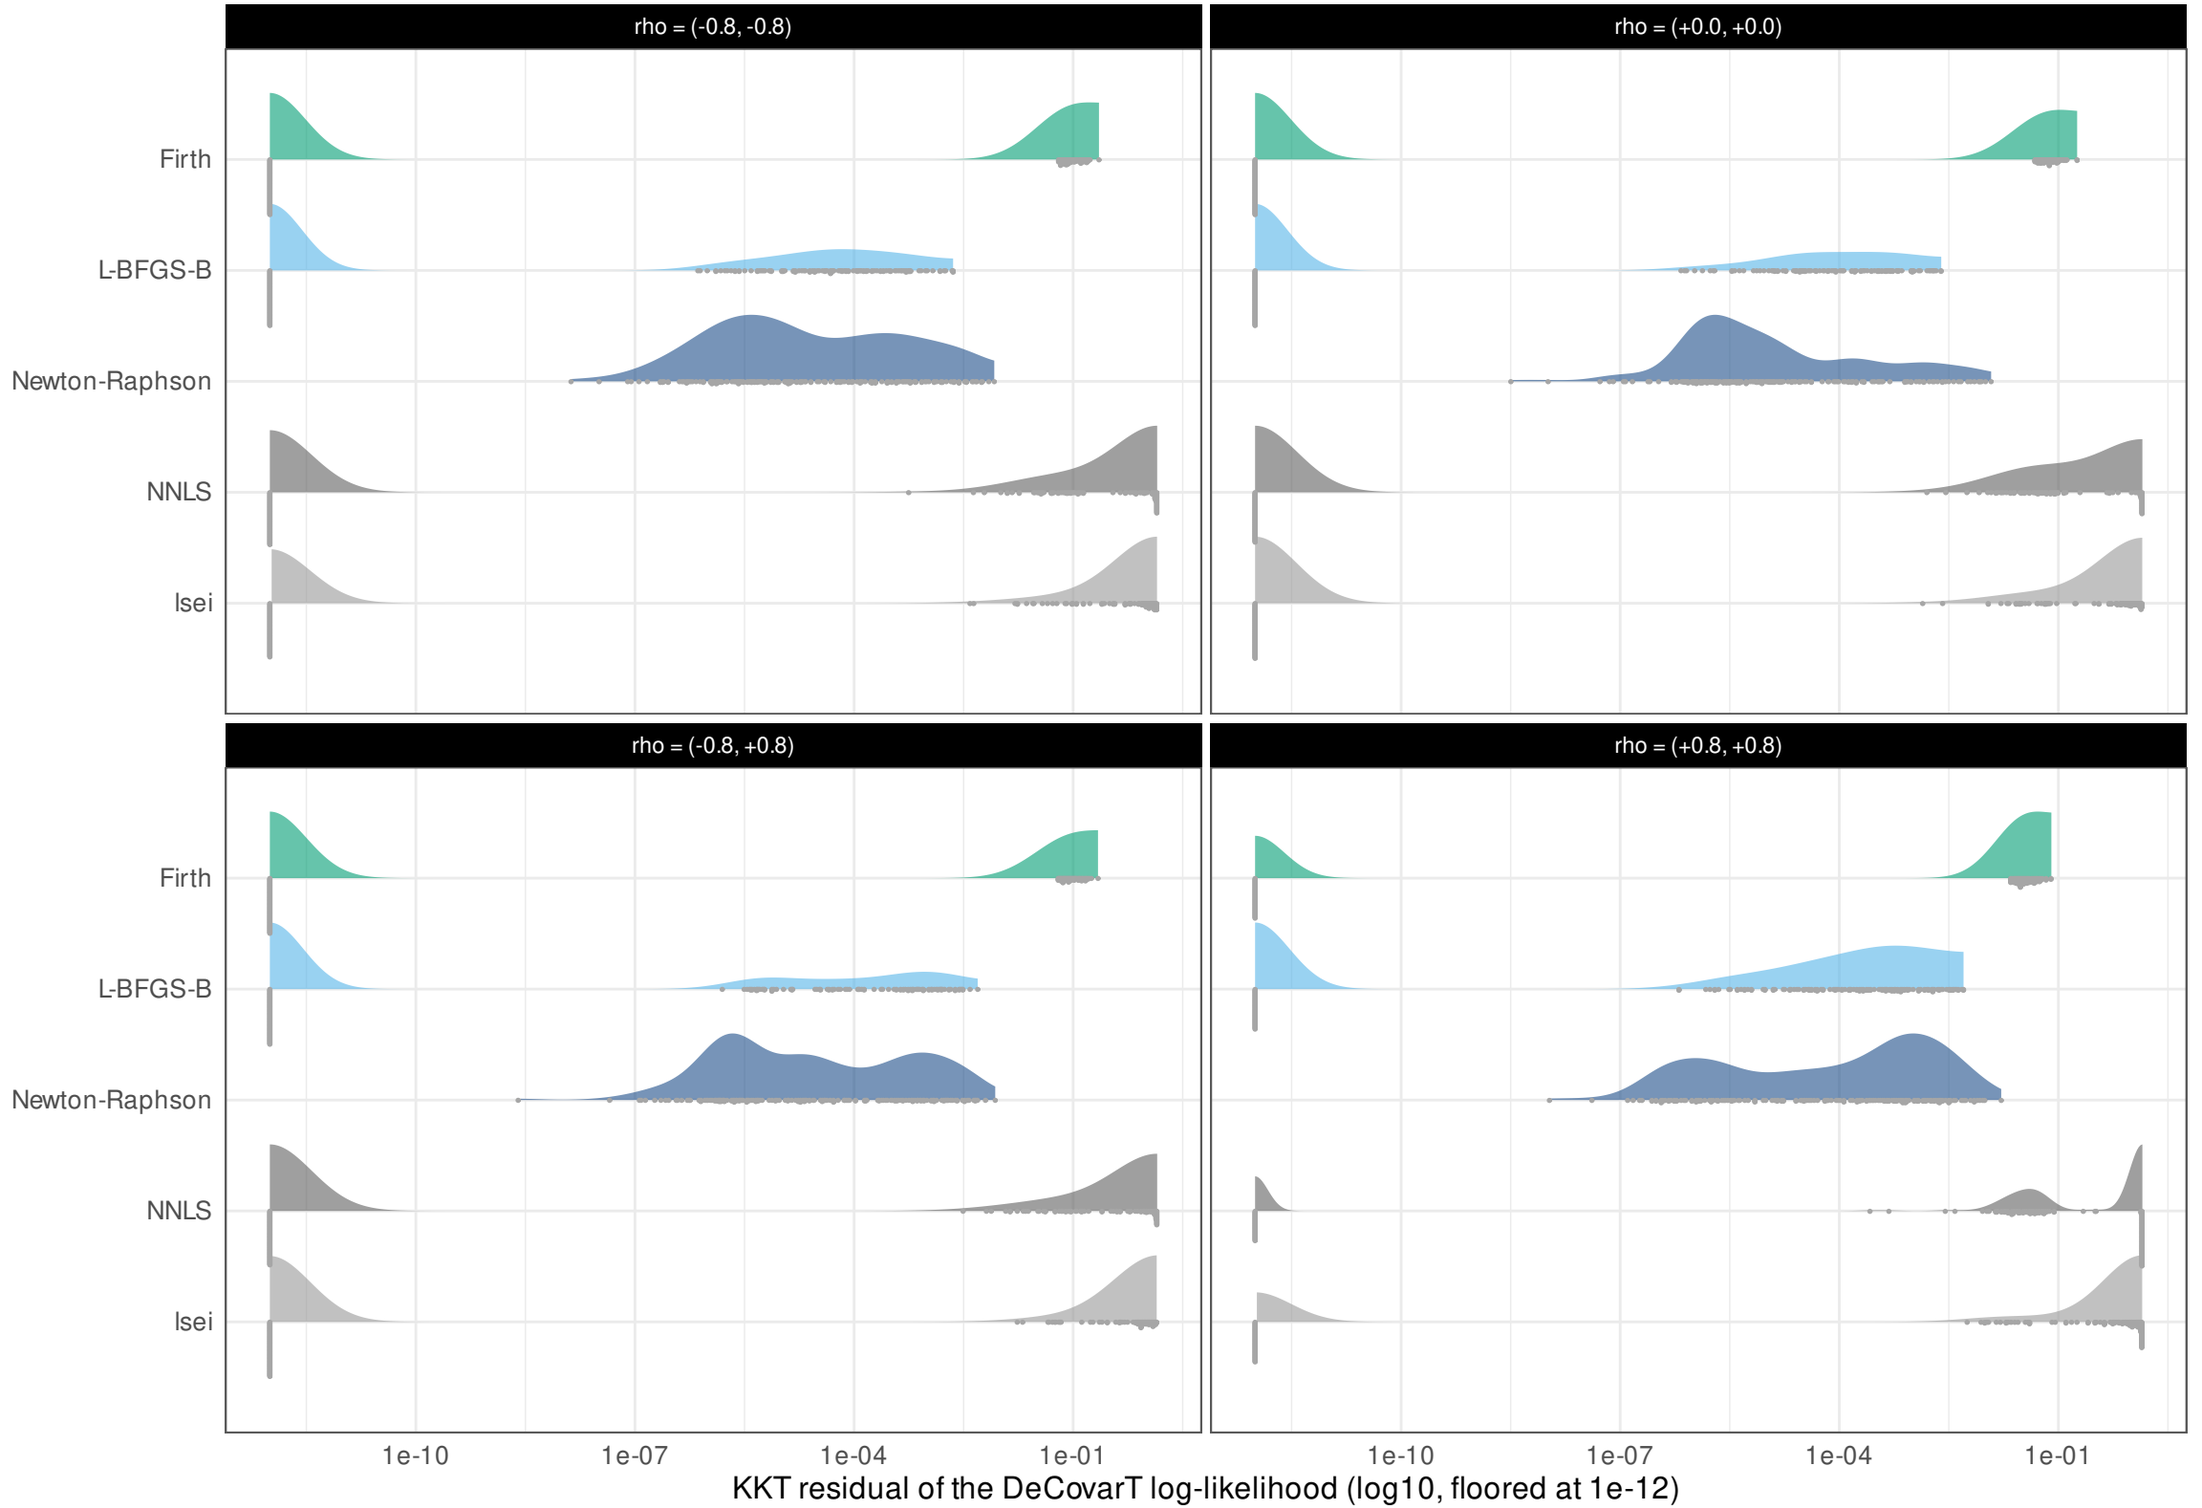

large centroid gap / homoscedastic / moderately unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

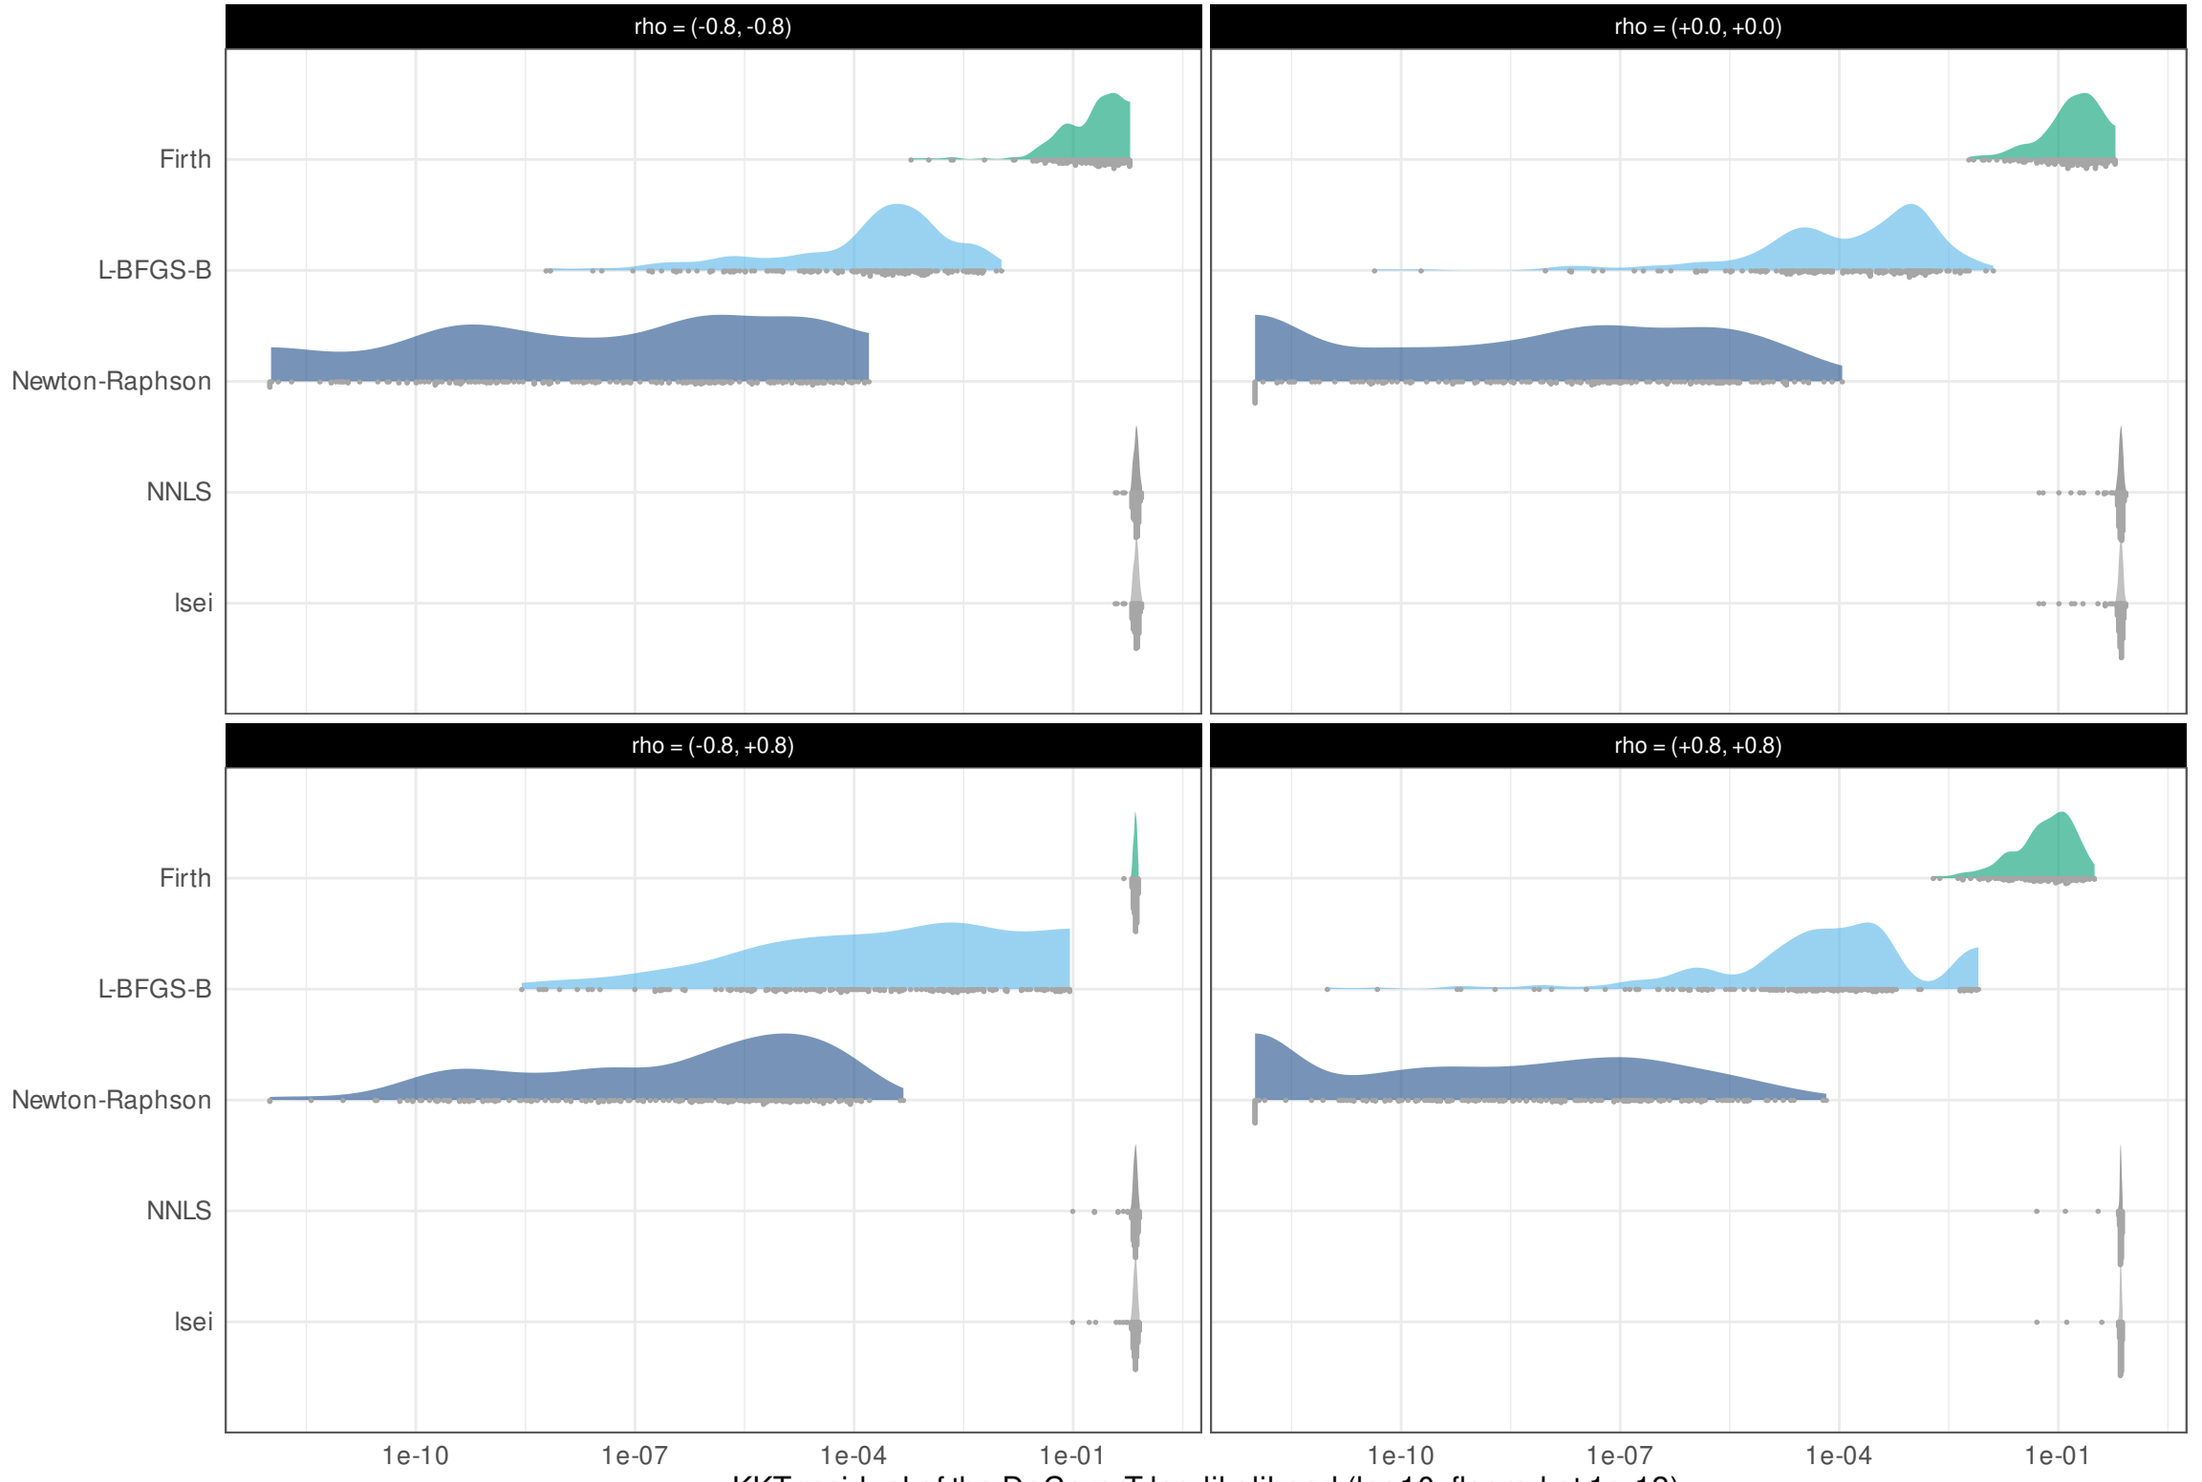

large centroid gap / homoscedastic / highly unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

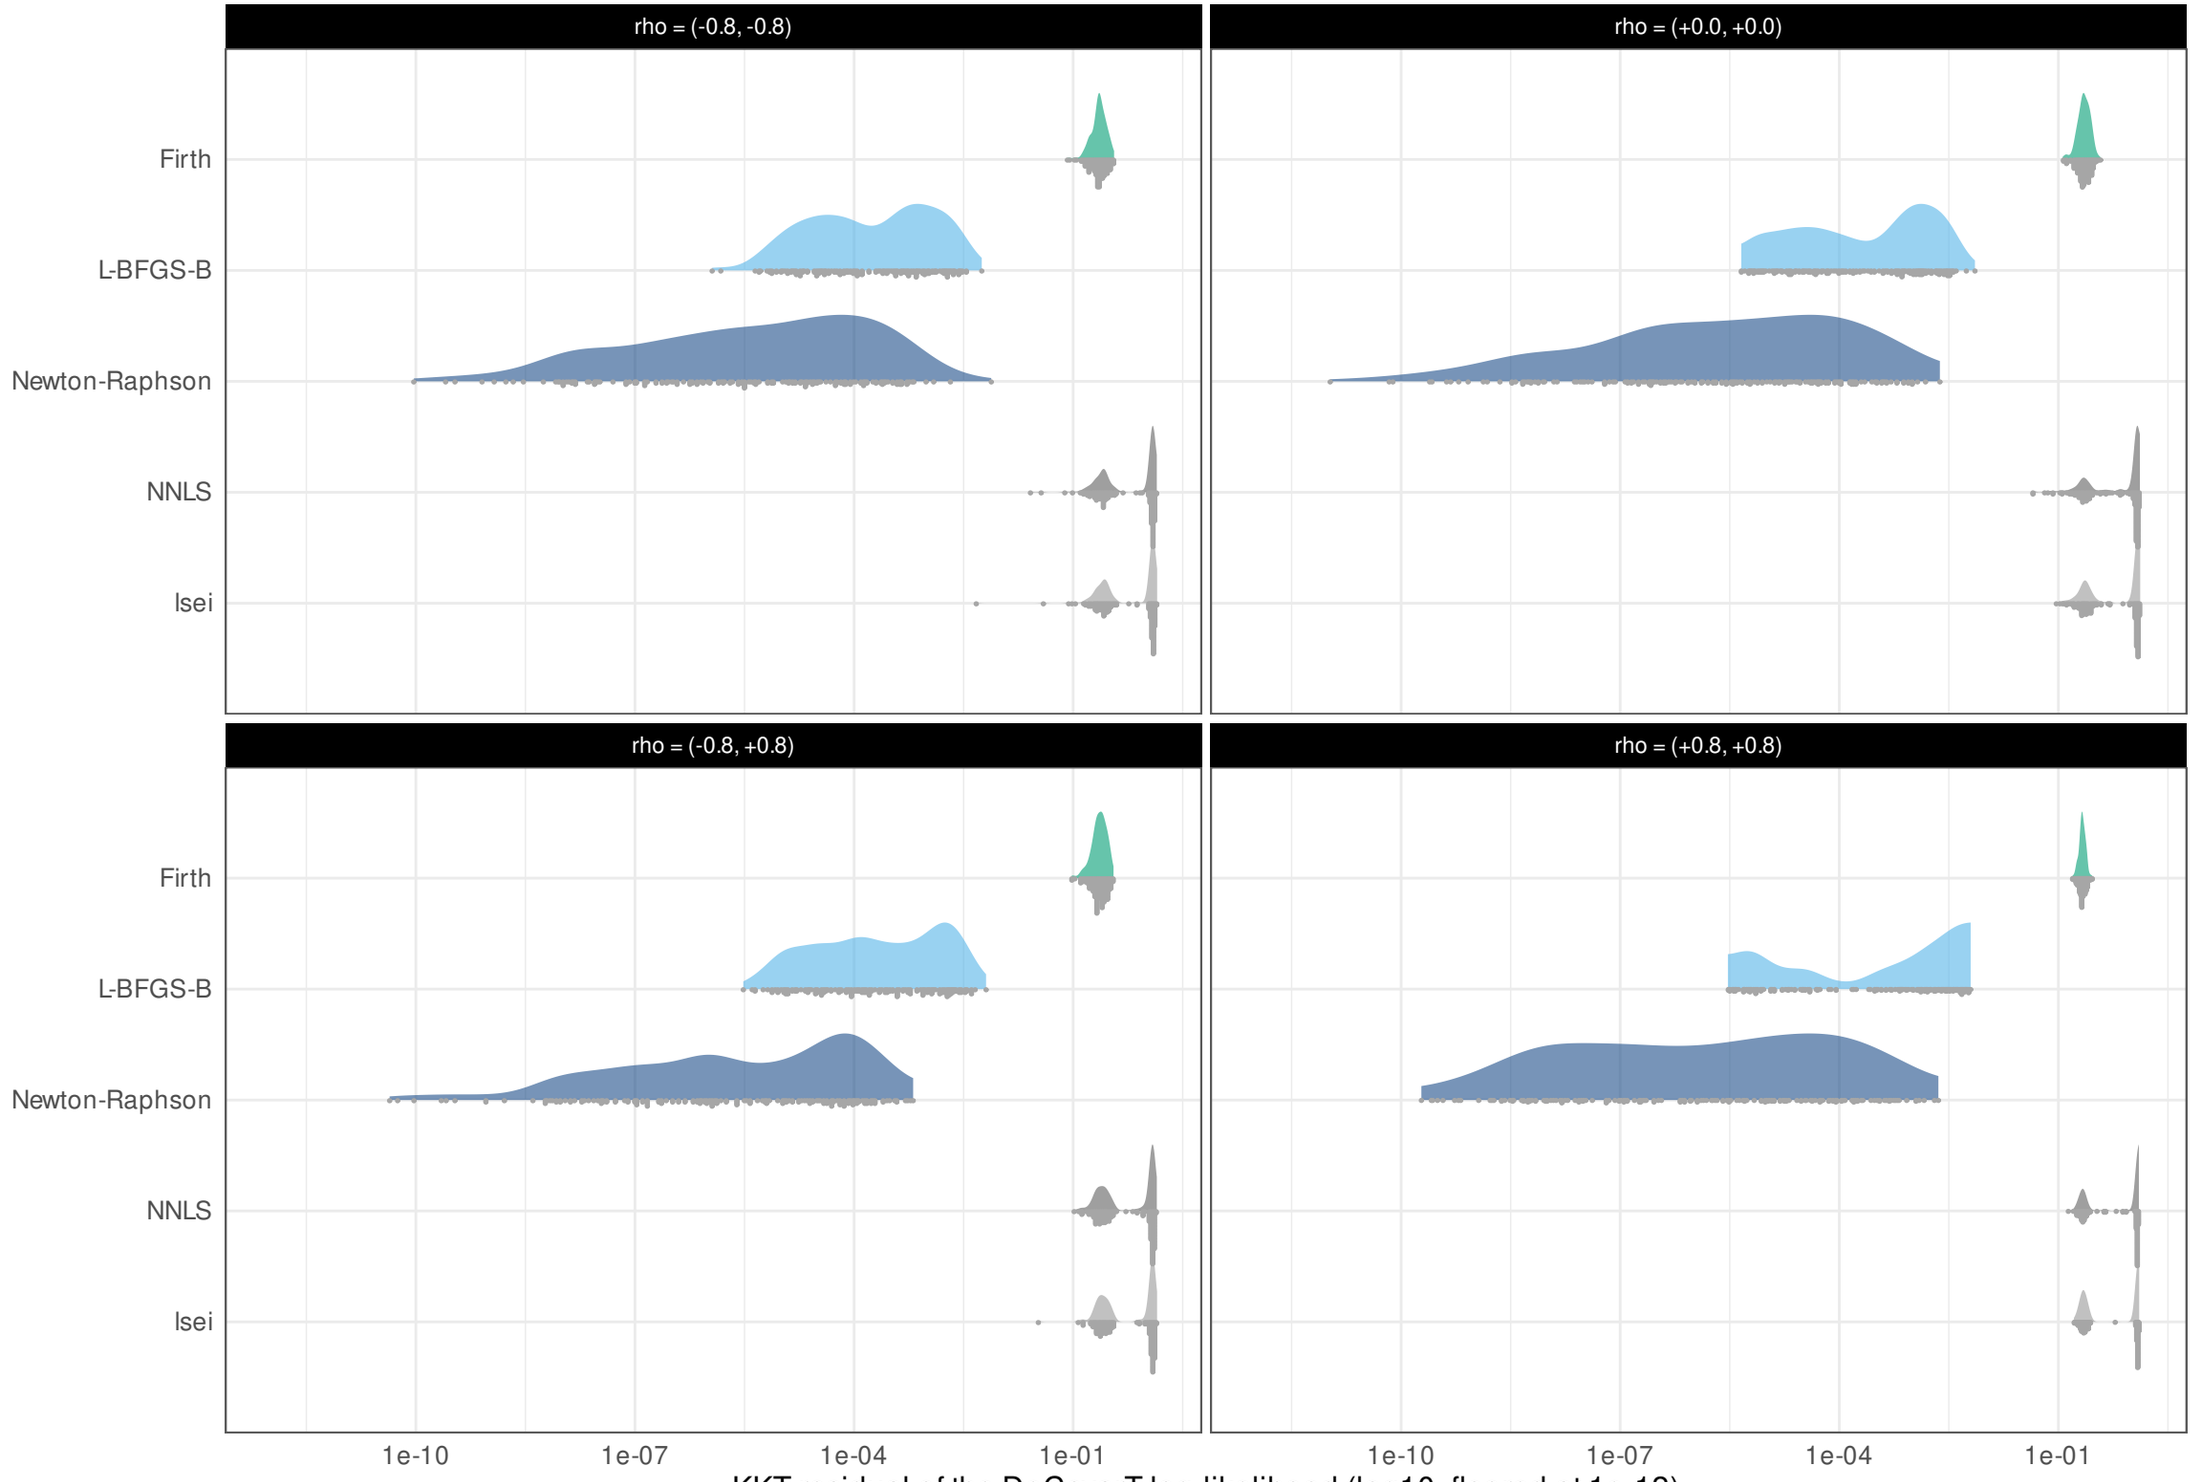

large centroid gap / heteroscedastic / balanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

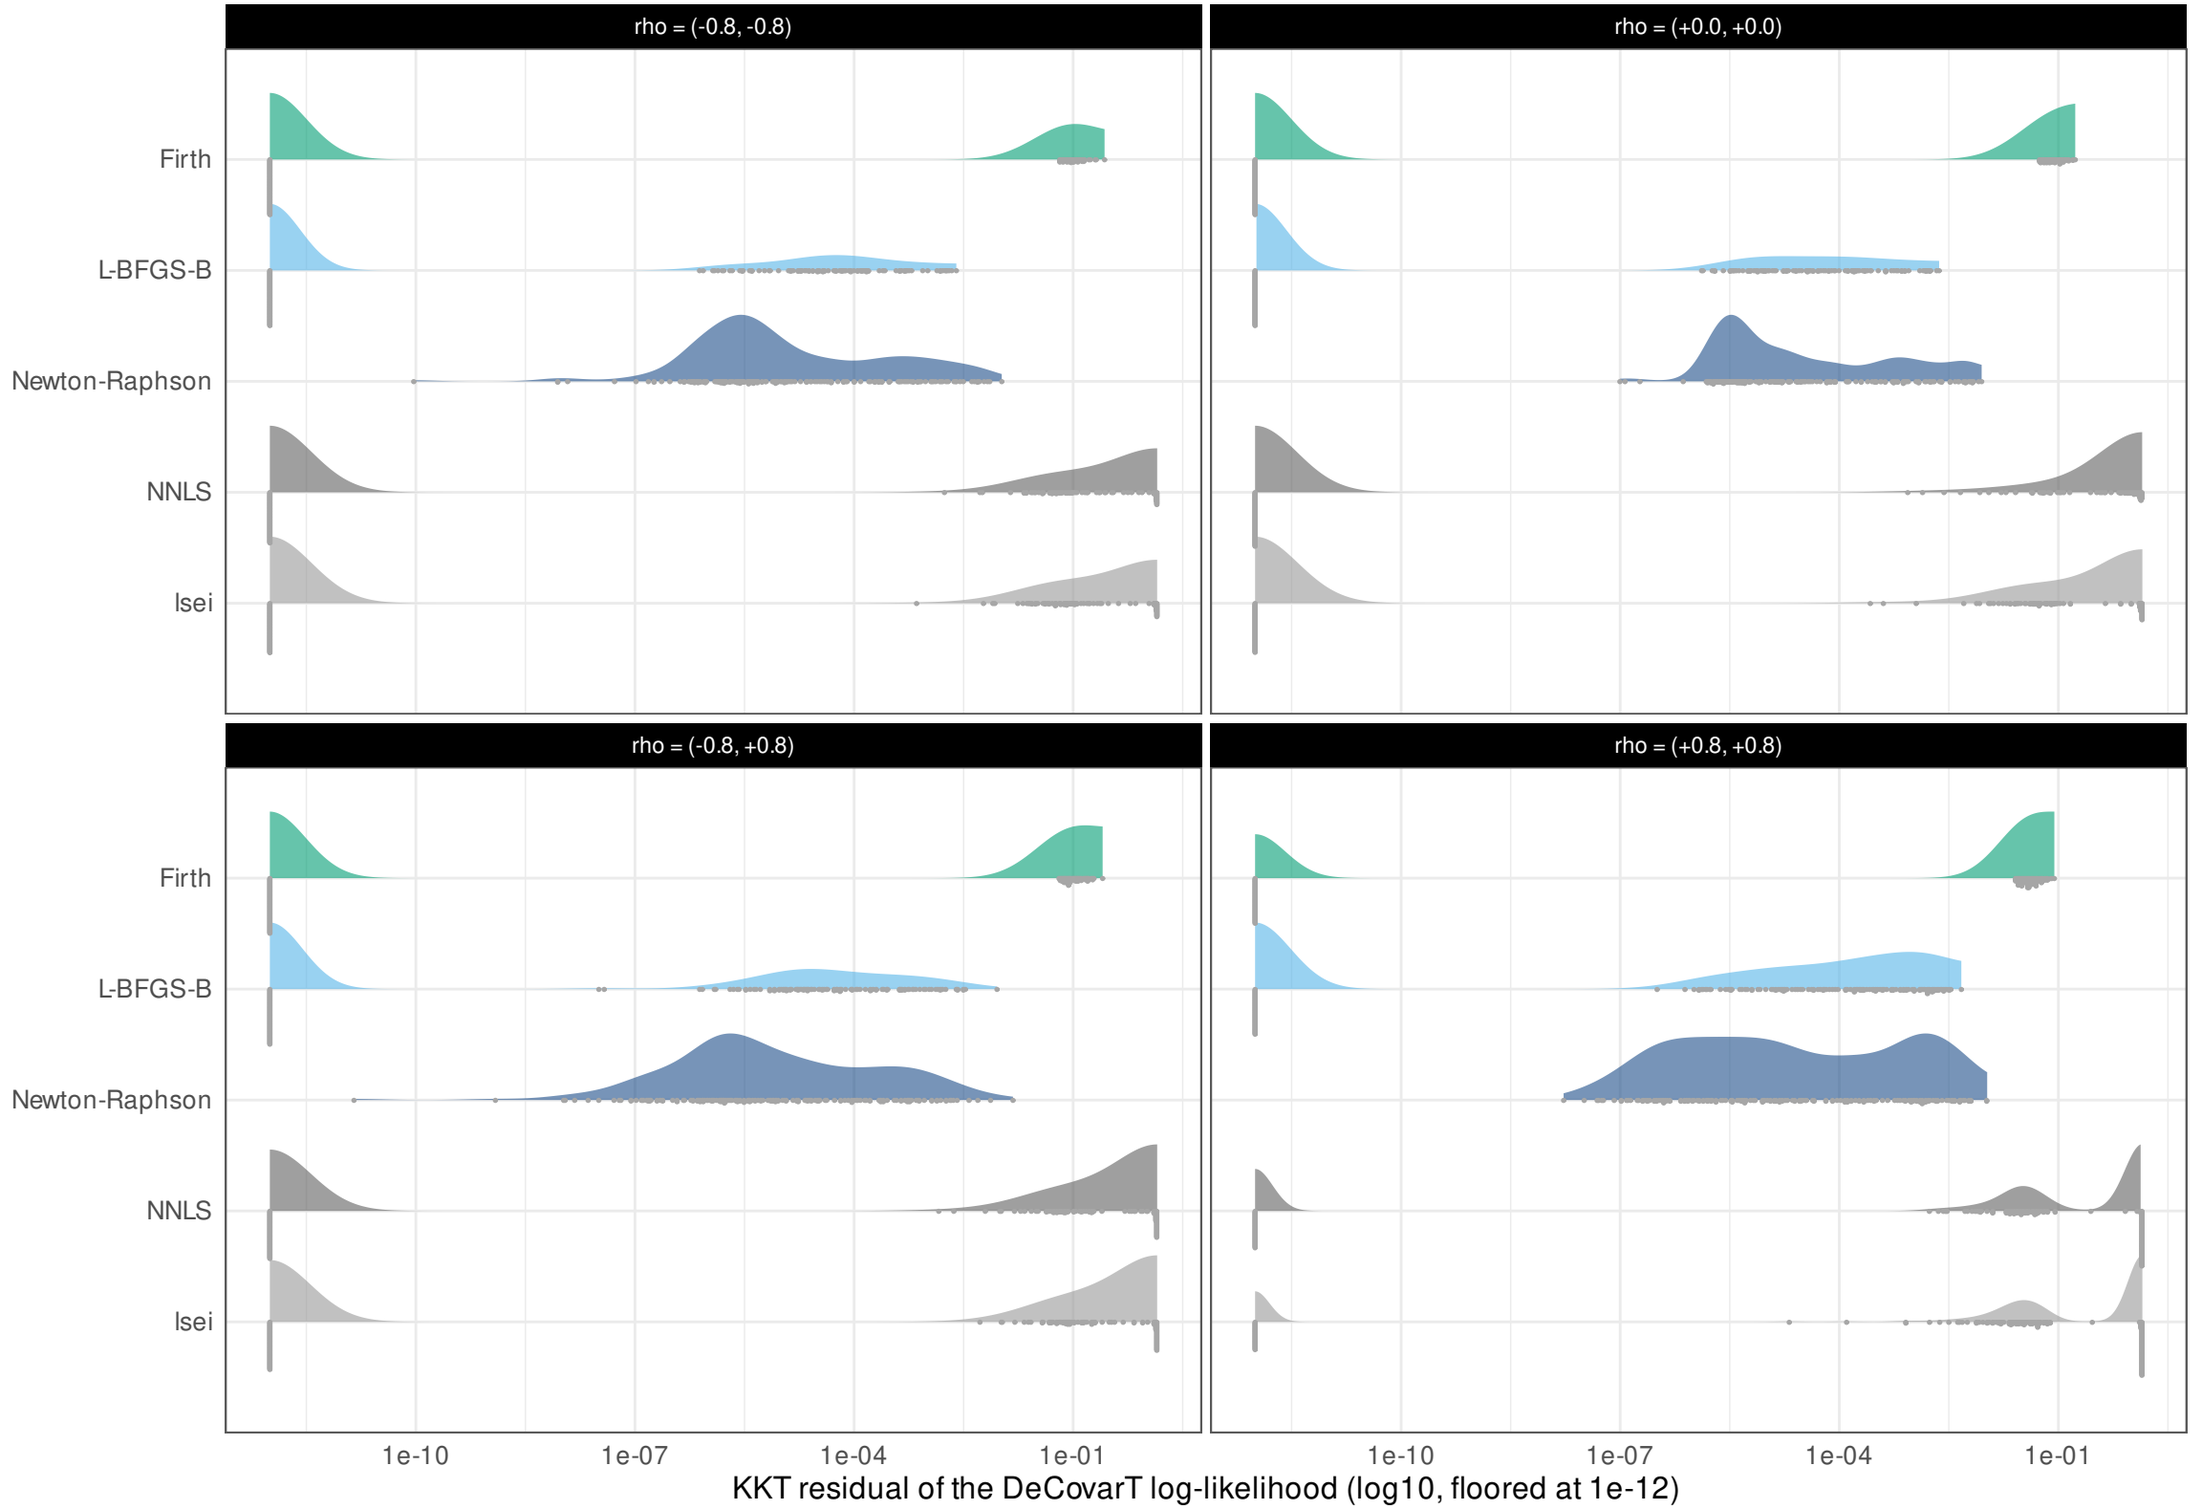

large centroid gap / heteroscedastic / moderately unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

large centroid gap / heteroscedastic / highly unbalanced

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.
