Gene networks and the covariance on their edges / G = 20 / low sibling overlap

Edges of the precision support; width |Σij| on a scale shared by every page, colour its sign. Genes coloured by block in the stochastic block models; hubs (degree at or above the 90th percentile) in yellow in the scale-free graphs, with a shaded ellipse around the three largest hubs and their neighbours.

Gene networks and the covariance on their edges / G = 20 / high sibling overlap

Edges of the precision support; width |Σij| on a scale shared by every page, colour its sign. Genes coloured by block in the stochastic block models; hubs (degree at or above the 90th percentile) in yellow in the scale-free graphs, with a shaded ellipse around the three largest hubs and their neighbours.

Gene networks and the covariance on their edges / G = 200 / low sibling overlap

Cell type 1 (lineage 1, SBM)

Cell type 2 (lineage 1, SBM)

Cell type 3 (lineage 2, scale-free)

Cell type 4 (lineage 2, scale-free)

Gene block 1 block 2 block 3 hub other gene

$|\Sigma_{ij}|$ 0.000 0.001 0.002

Sign of Σ_{ij} negative positive

Edges of the precision support; width |Σij| on a scale shared by every page, colour its sign. Genes coloured by block in the stochastic block models; hubs (degree at or above the 90th percentile) in yellow in the scale-free graphs, with a shaded ellipse around the three largest hubs and their neighbours.

Gene networks and the covariance on their edges / G = 200 / high sibling overlap

Cell type 1 (lineage 1, SBM)

Cell type 2 (lineage 1, SBM)

Cell type 3 (lineage 2, scale-free)
