# Descriptors of the simulated scenarios

Shape size and colour scale each column on its own, from its minimum to its maximum (log10 first when the column spans more than two orders of magnitude); the smallest shape is the column minimum. Columns constant over the design show their value. Numbers: scenario_metrics_table.html / .pdf.
Mean signature: kappa(mu) = 3.46 to 15, lambda_min(mu'mu) = 0.00167 to 0.0167. (range over the scenarios)
