

small_CLD / homoscedastic / balanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / homoscedastic / moderately unbalanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / homoscedastic / highly unbalanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / heteroscedastic / balanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / heteroscedastic / moderately unbalanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

small_CLD / heteroscedastic / highly unbalanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

max(L) = exp(ell - max ell) on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / homoscedastic / balanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / homoscedastic / moderately unbalanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / homoscedastic / highly unbalanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / heteroscedastic / balanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / heteroscedastic / moderately unbalanced

$\rho = (0, 0)$

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p* (white diamond). Dotted: numerical MLE (red circle, black stroke).

large_CLD / heteroscedastic / highly unbalanced

$\rho = (0, 0)$

Relative likelihood (log10 scale)

$\rho = (-0.8, -0.8)$

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).

$\rho = (0.8, 0.8)$

Relative likelihood (log10 scale)

$\rho = (-0.8, 0.8)$

Relative likelihood (log10 scale)

$\max(L) = \exp(\text{ell} - \max \text{ell})$ on a log10 scale. Dashed: true p^* (white diamond). Dotted: numerical MLE (red circle, black stroke).
