Convergence: theoretical success, theoretical and numerical failures

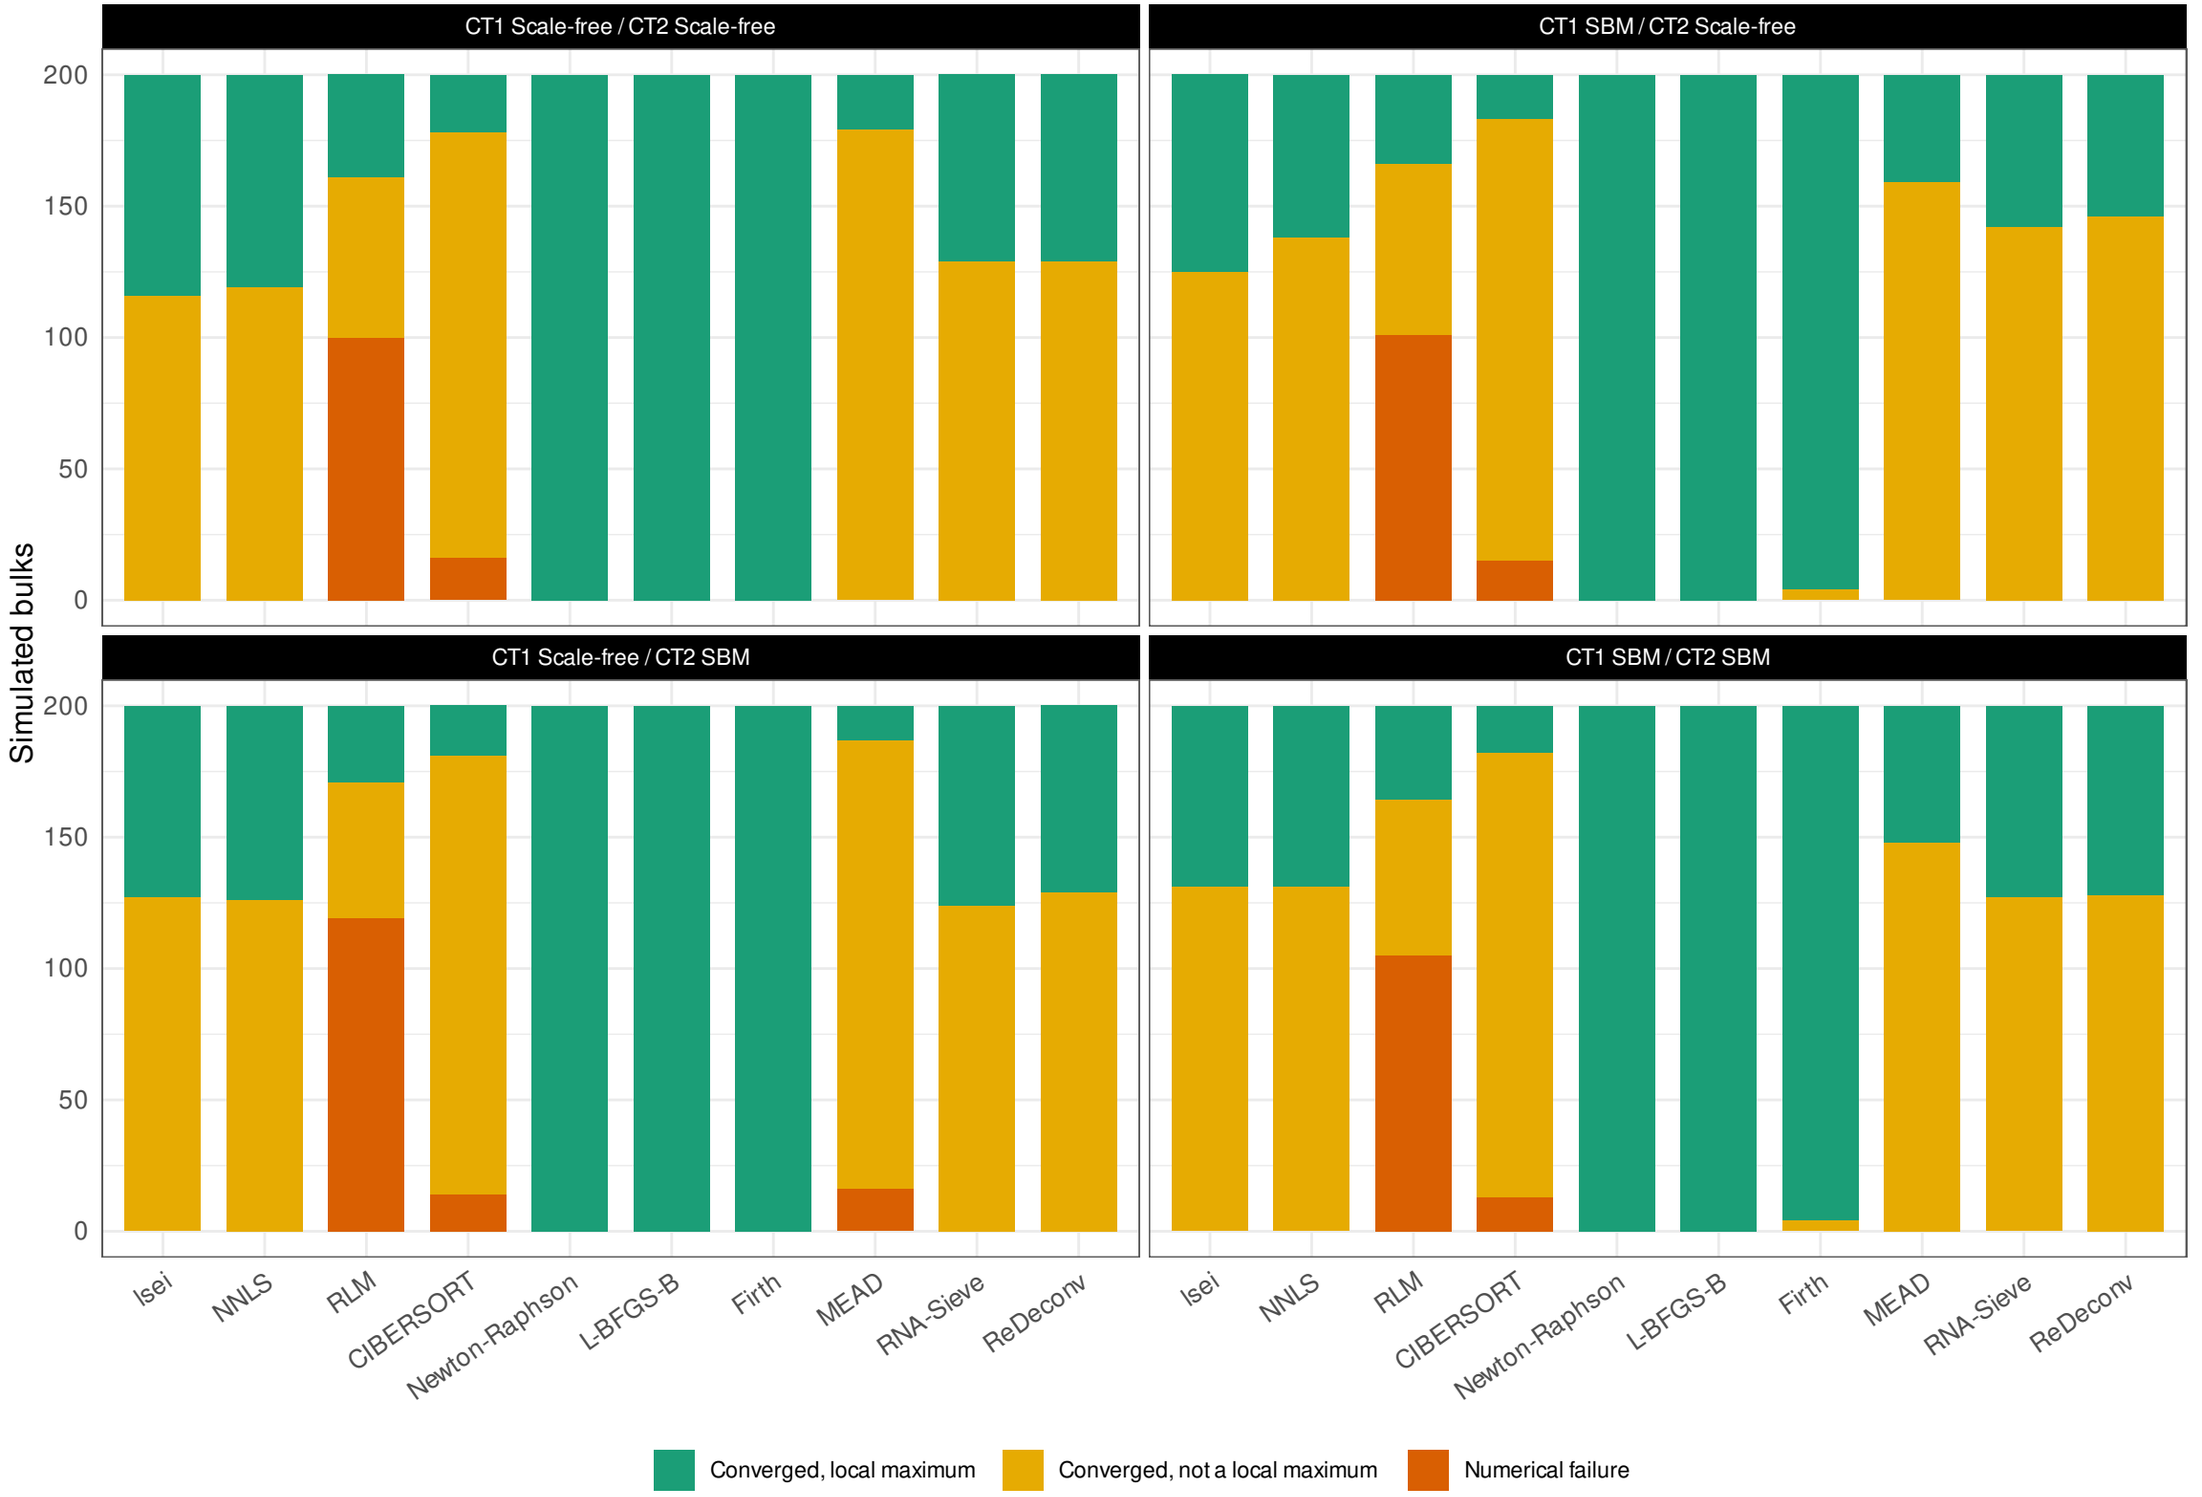

balanced / low overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

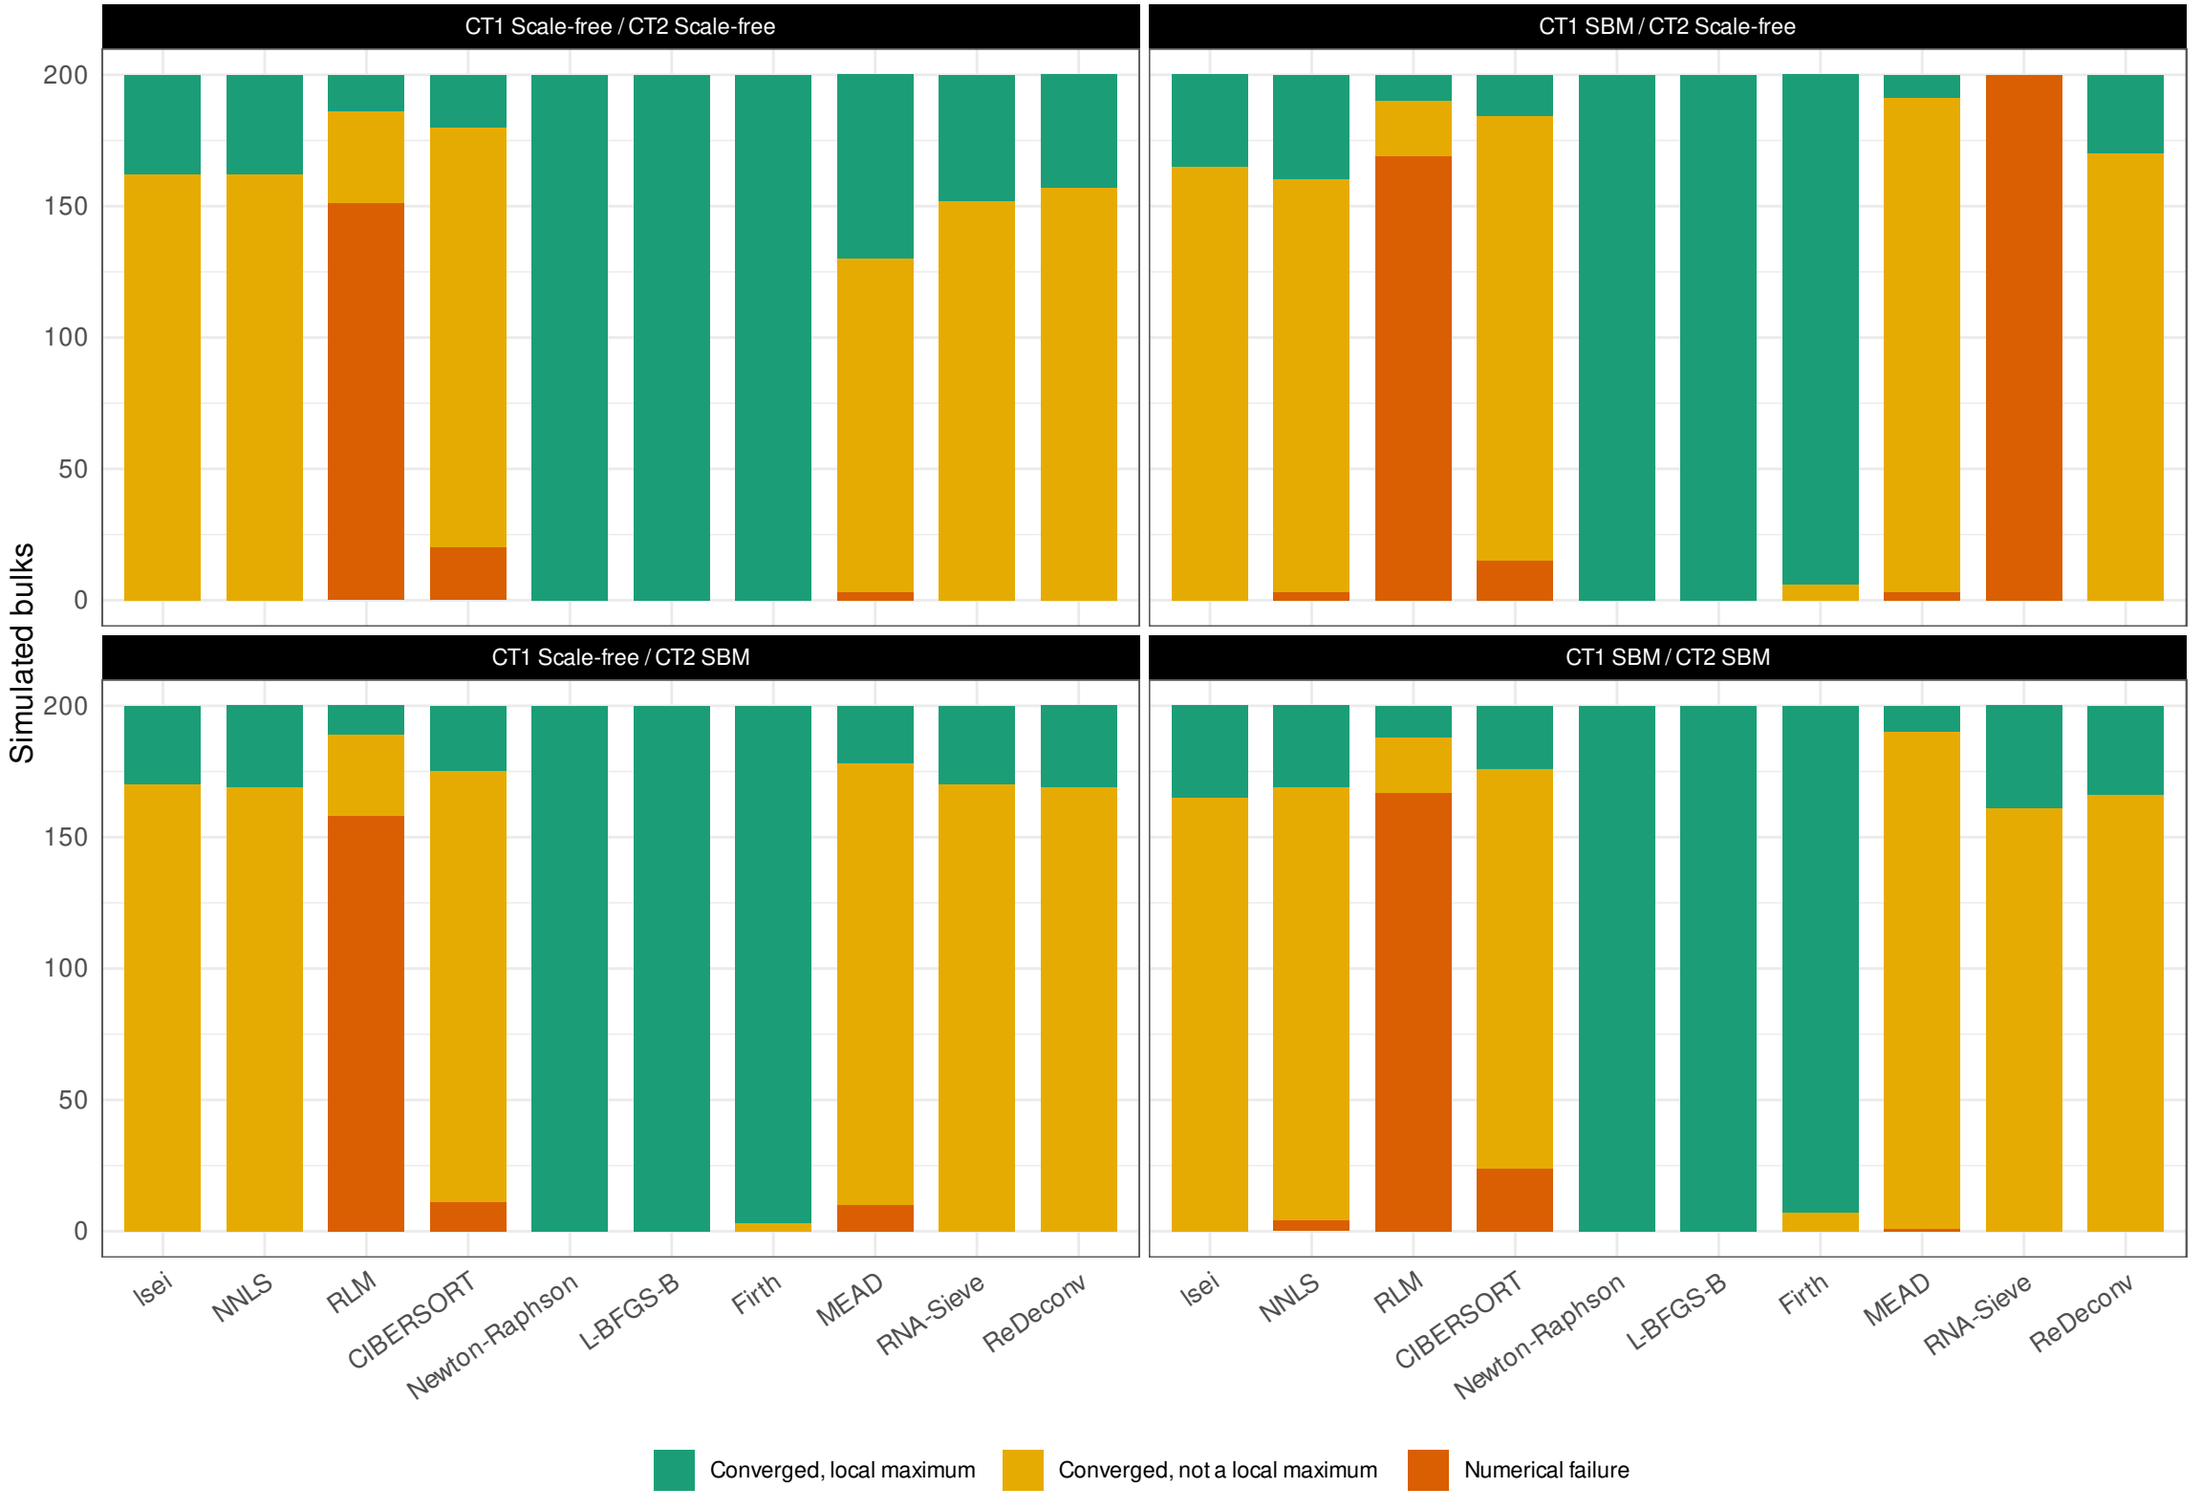

balanced / moderate overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

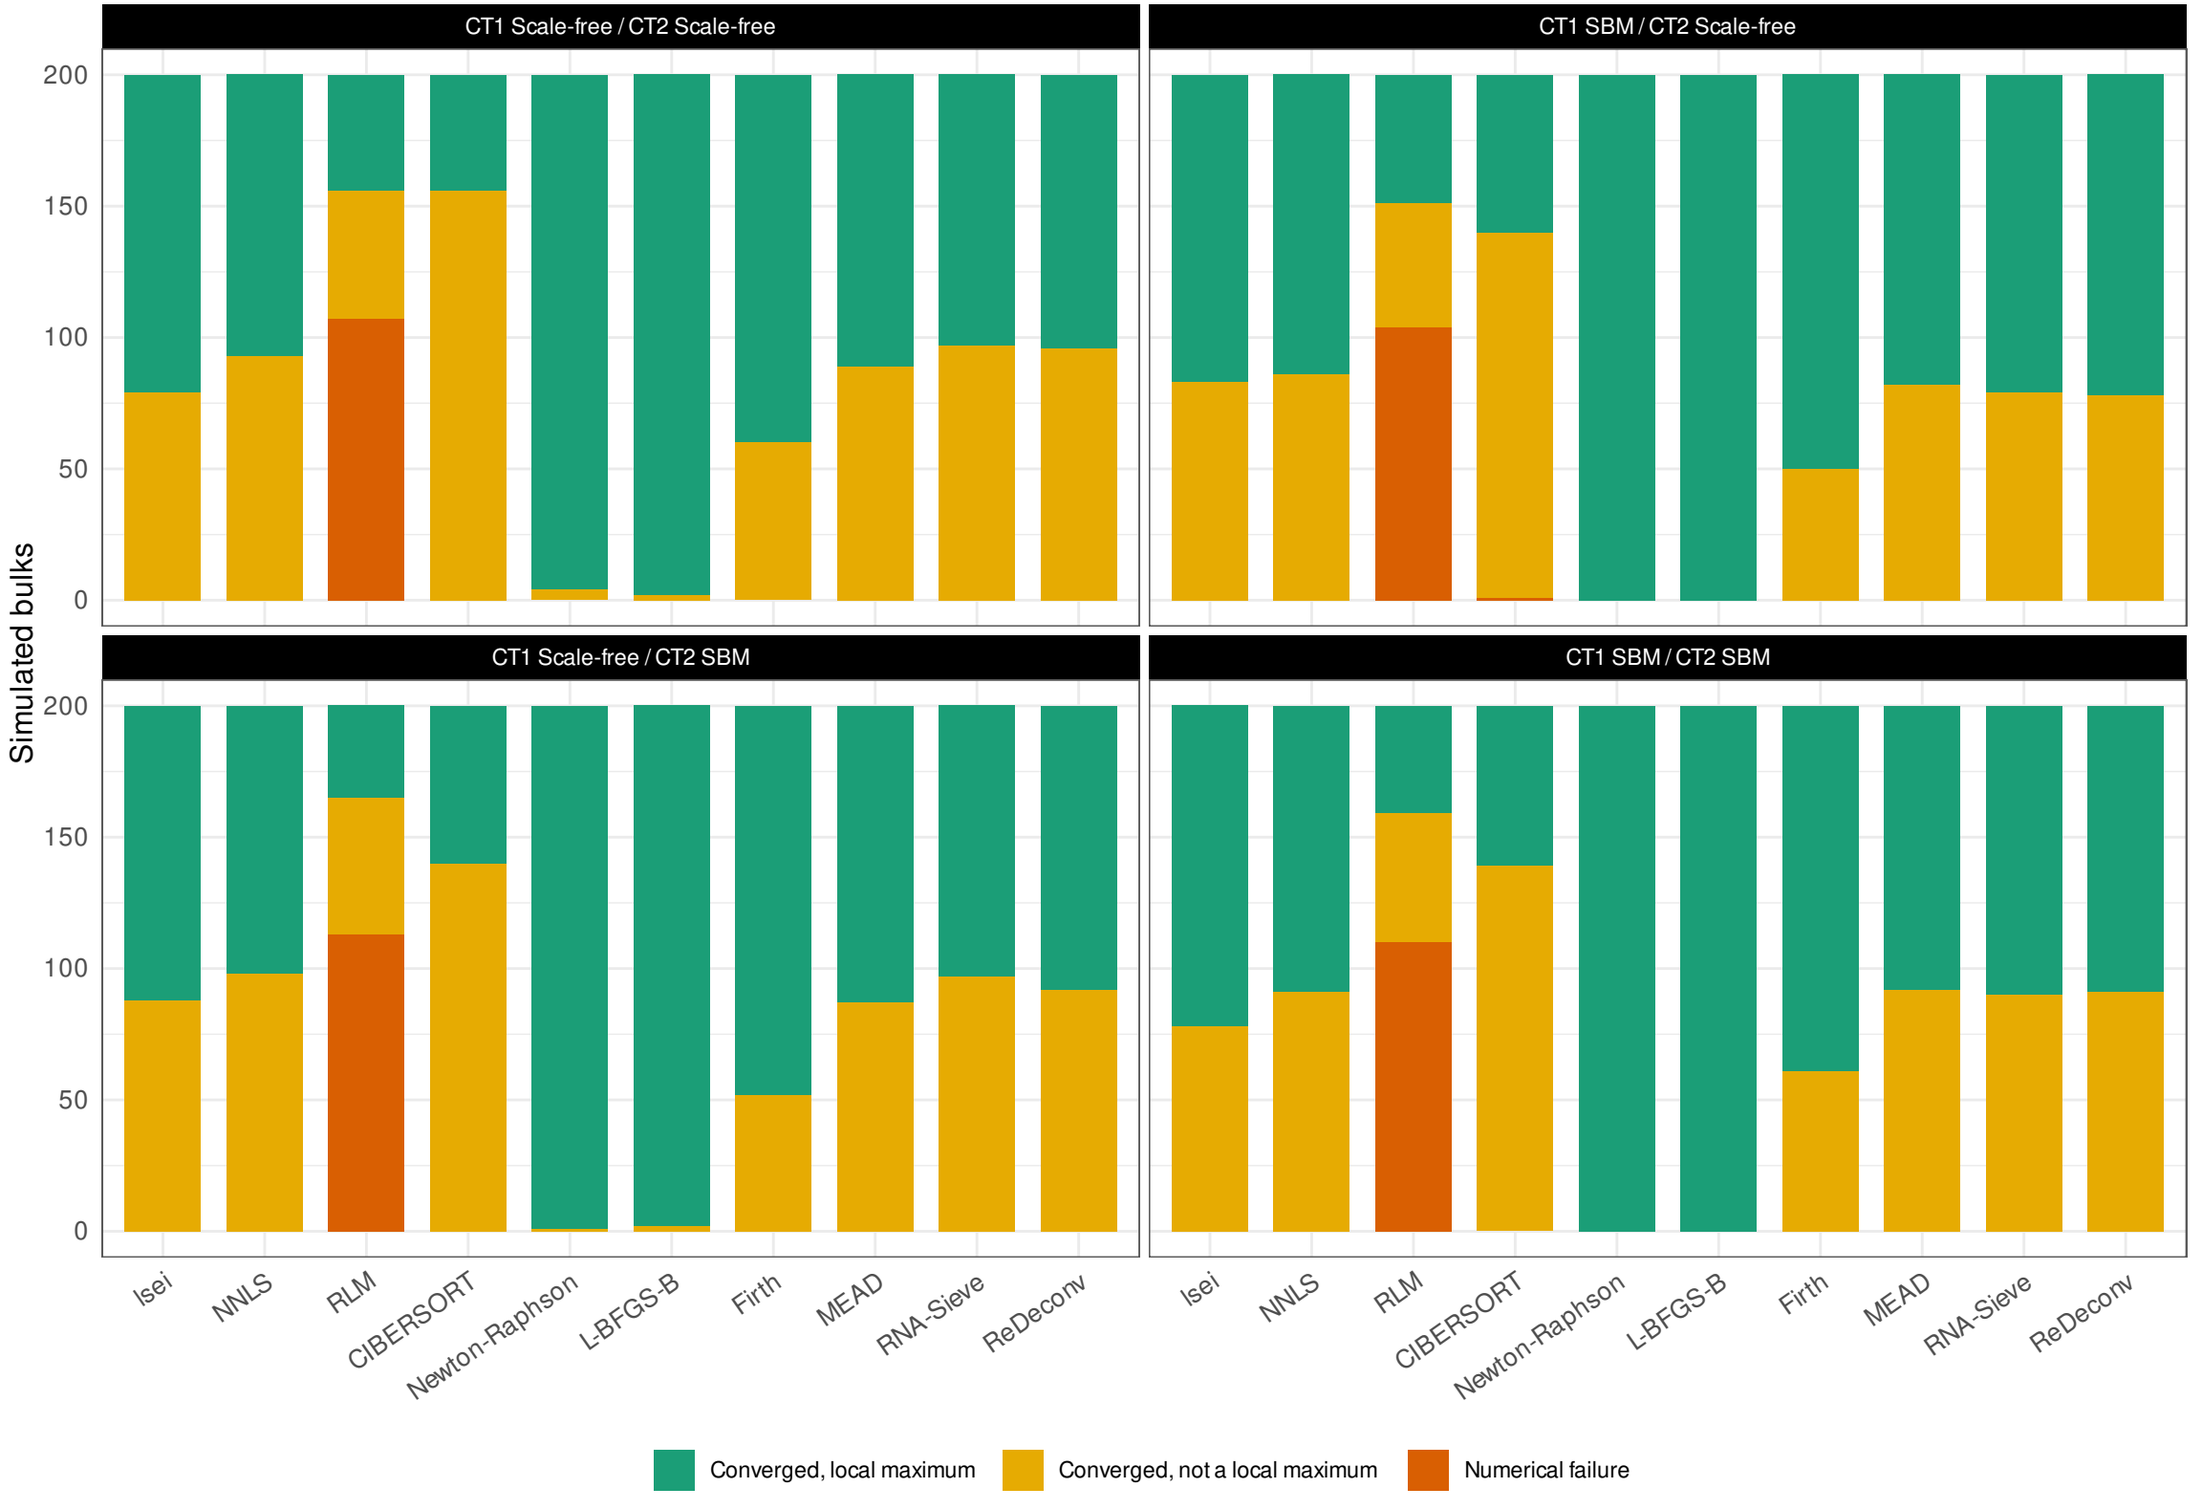

balanced / high overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

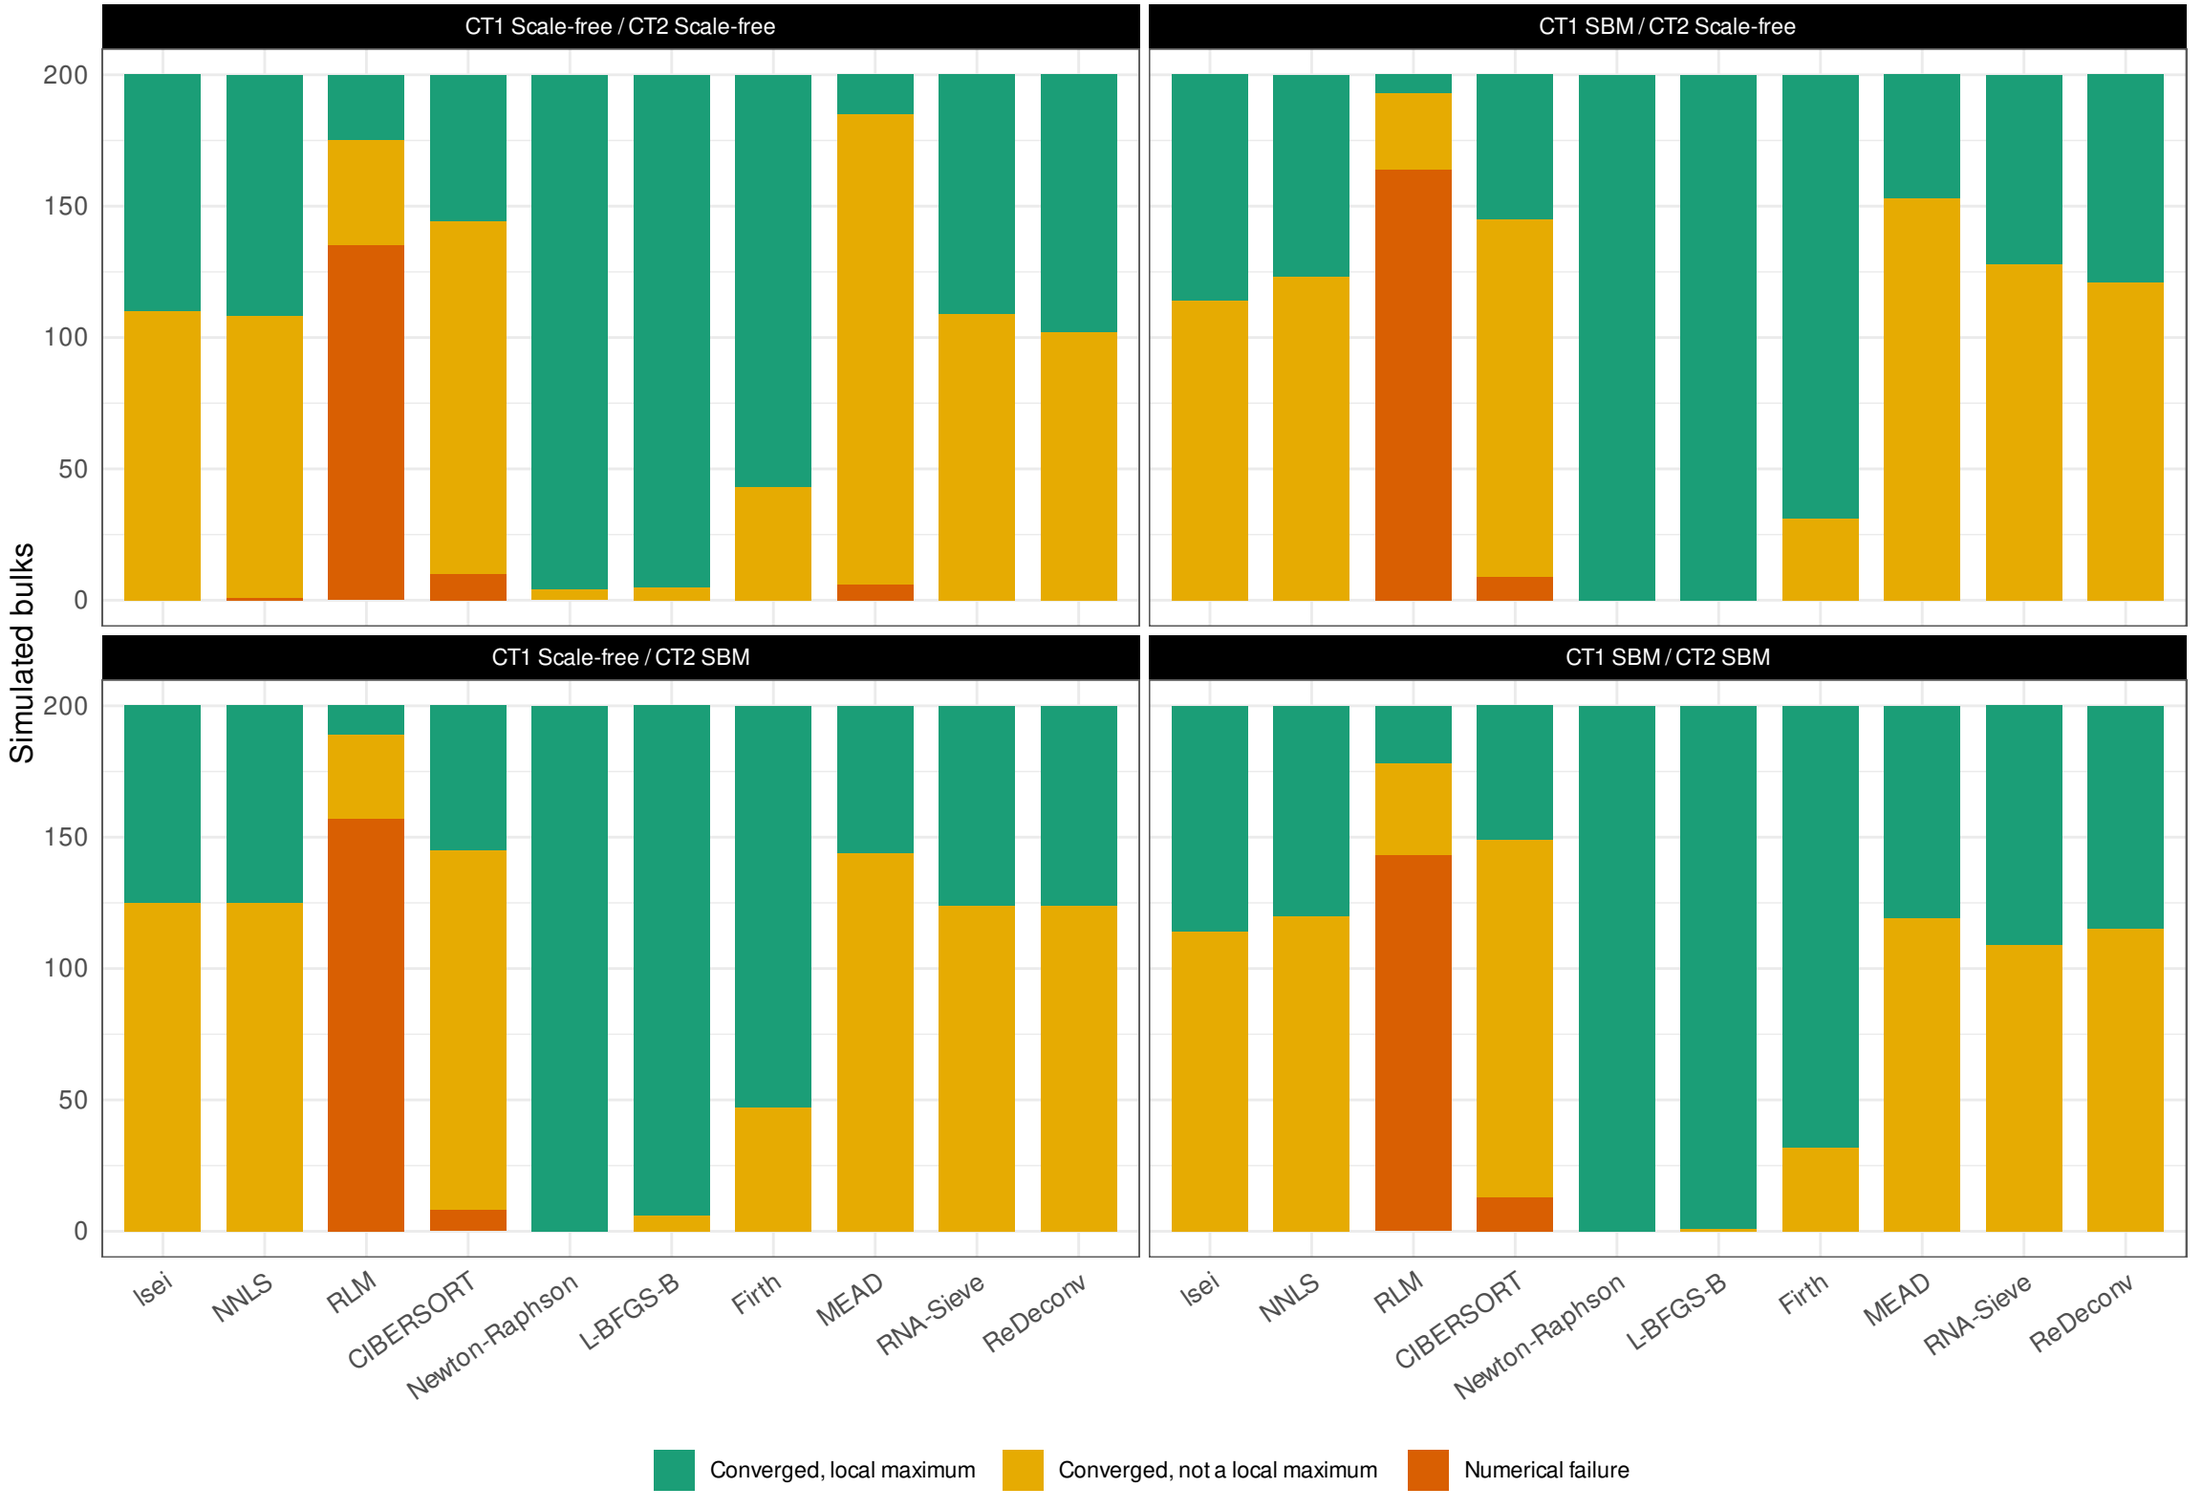

moderately unbalanced / low overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

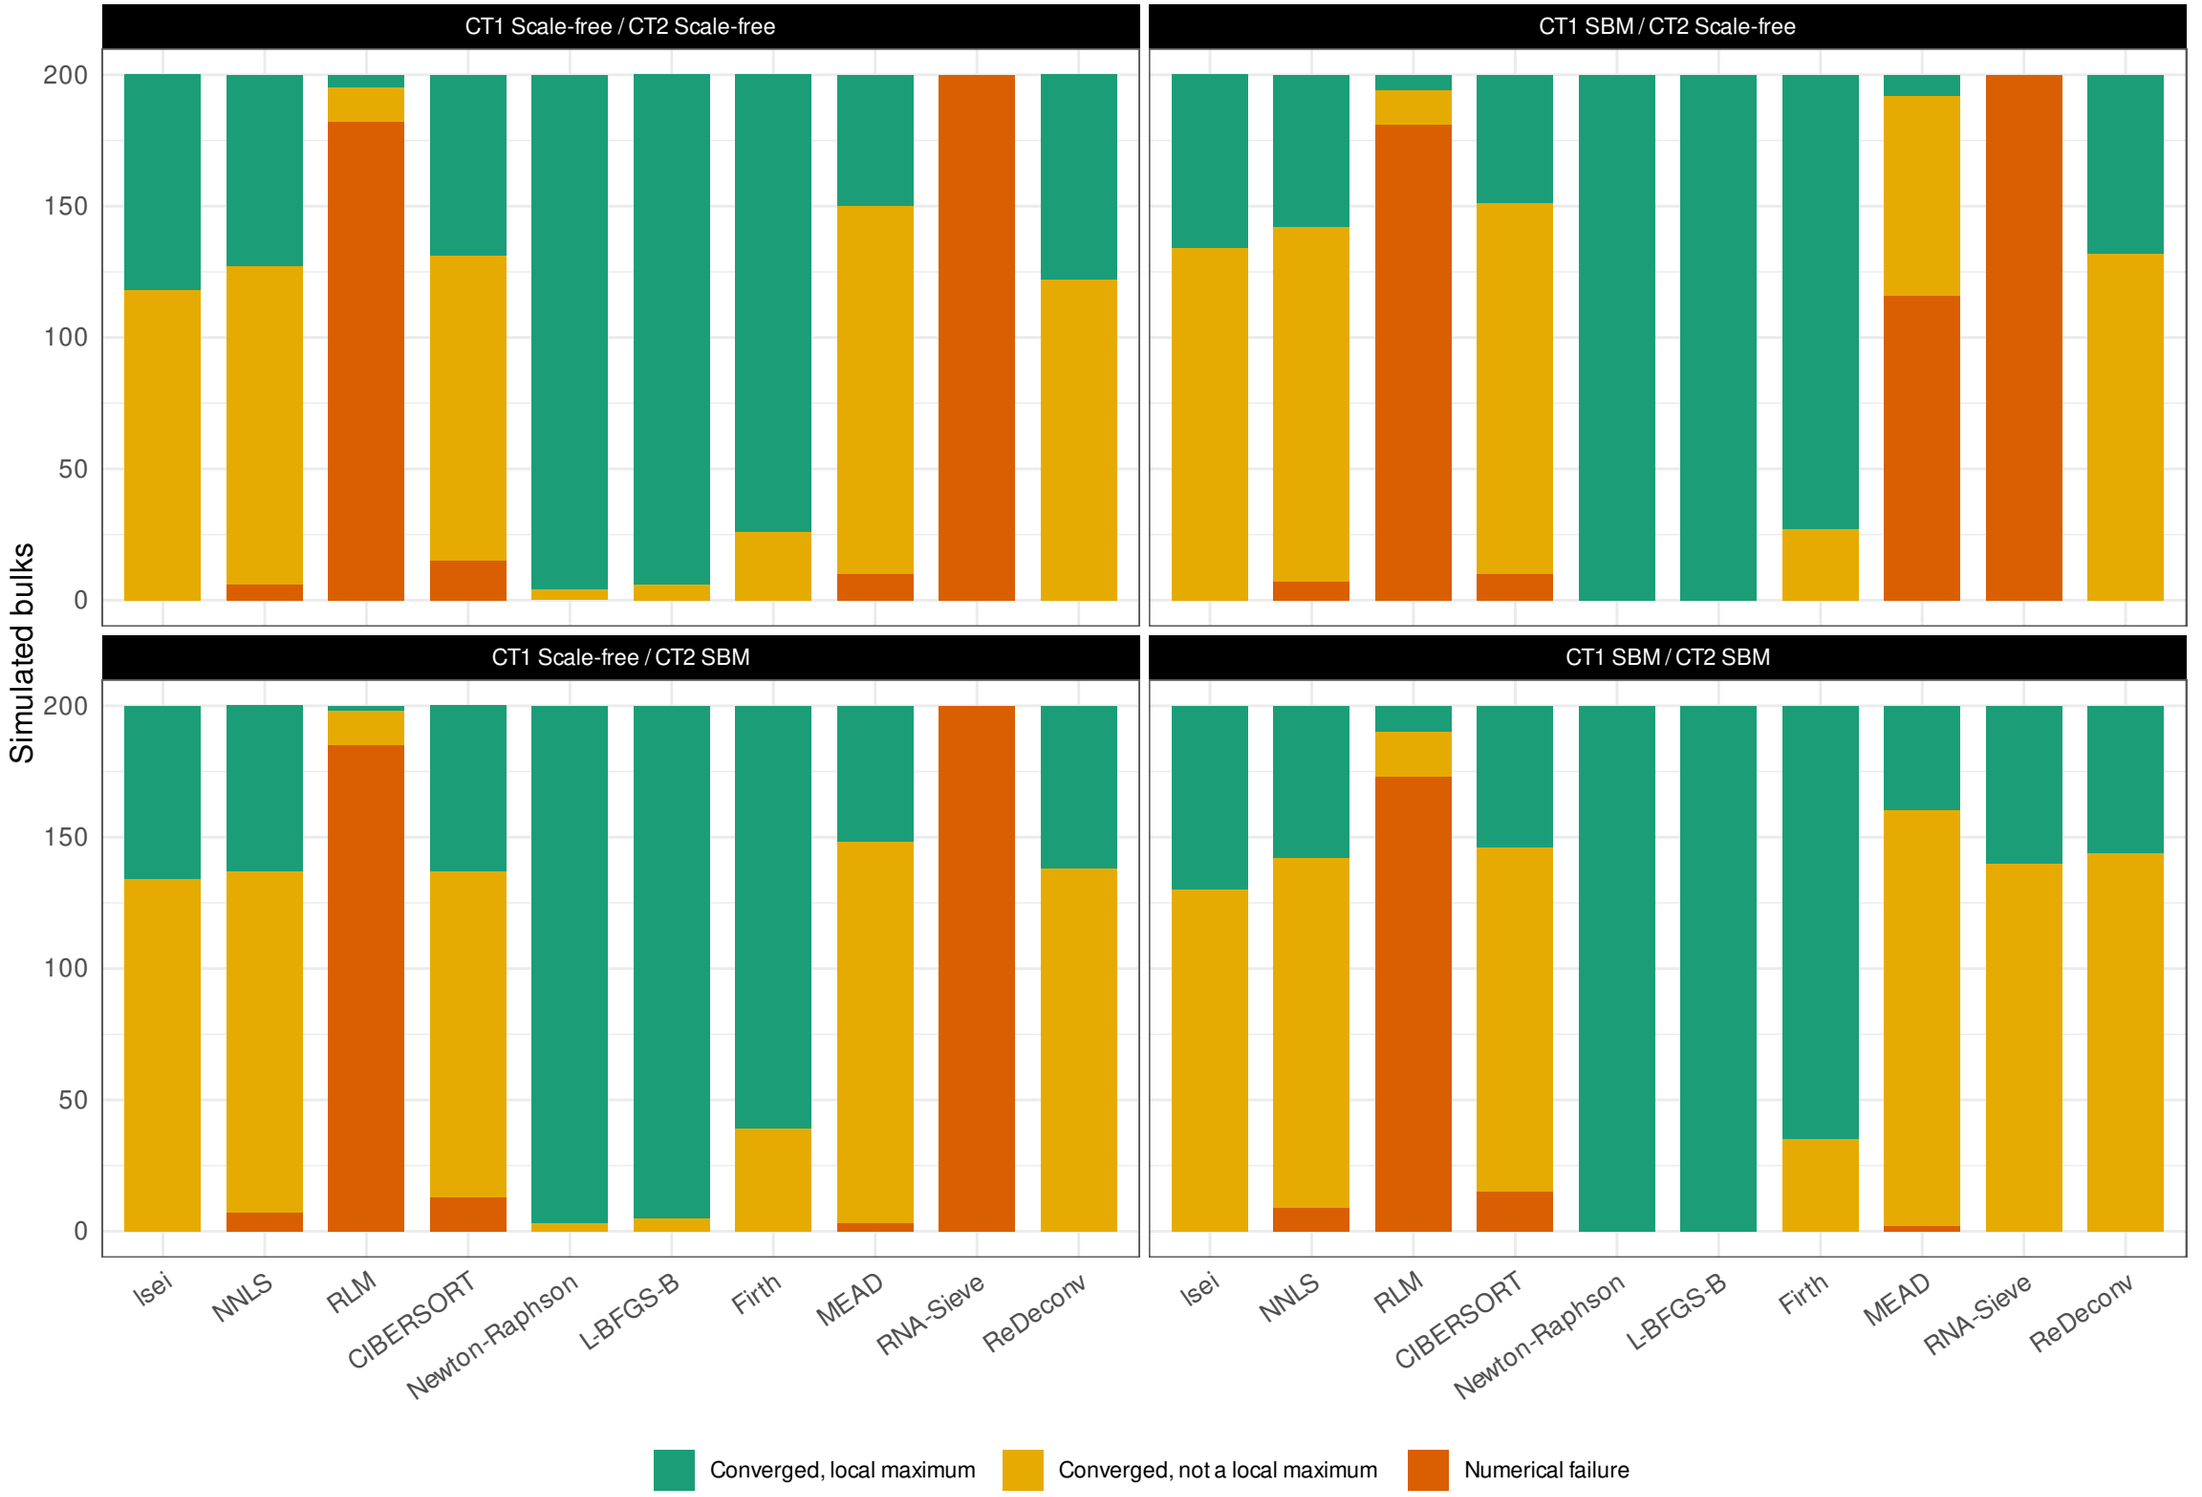

moderately unbalanced / moderate overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

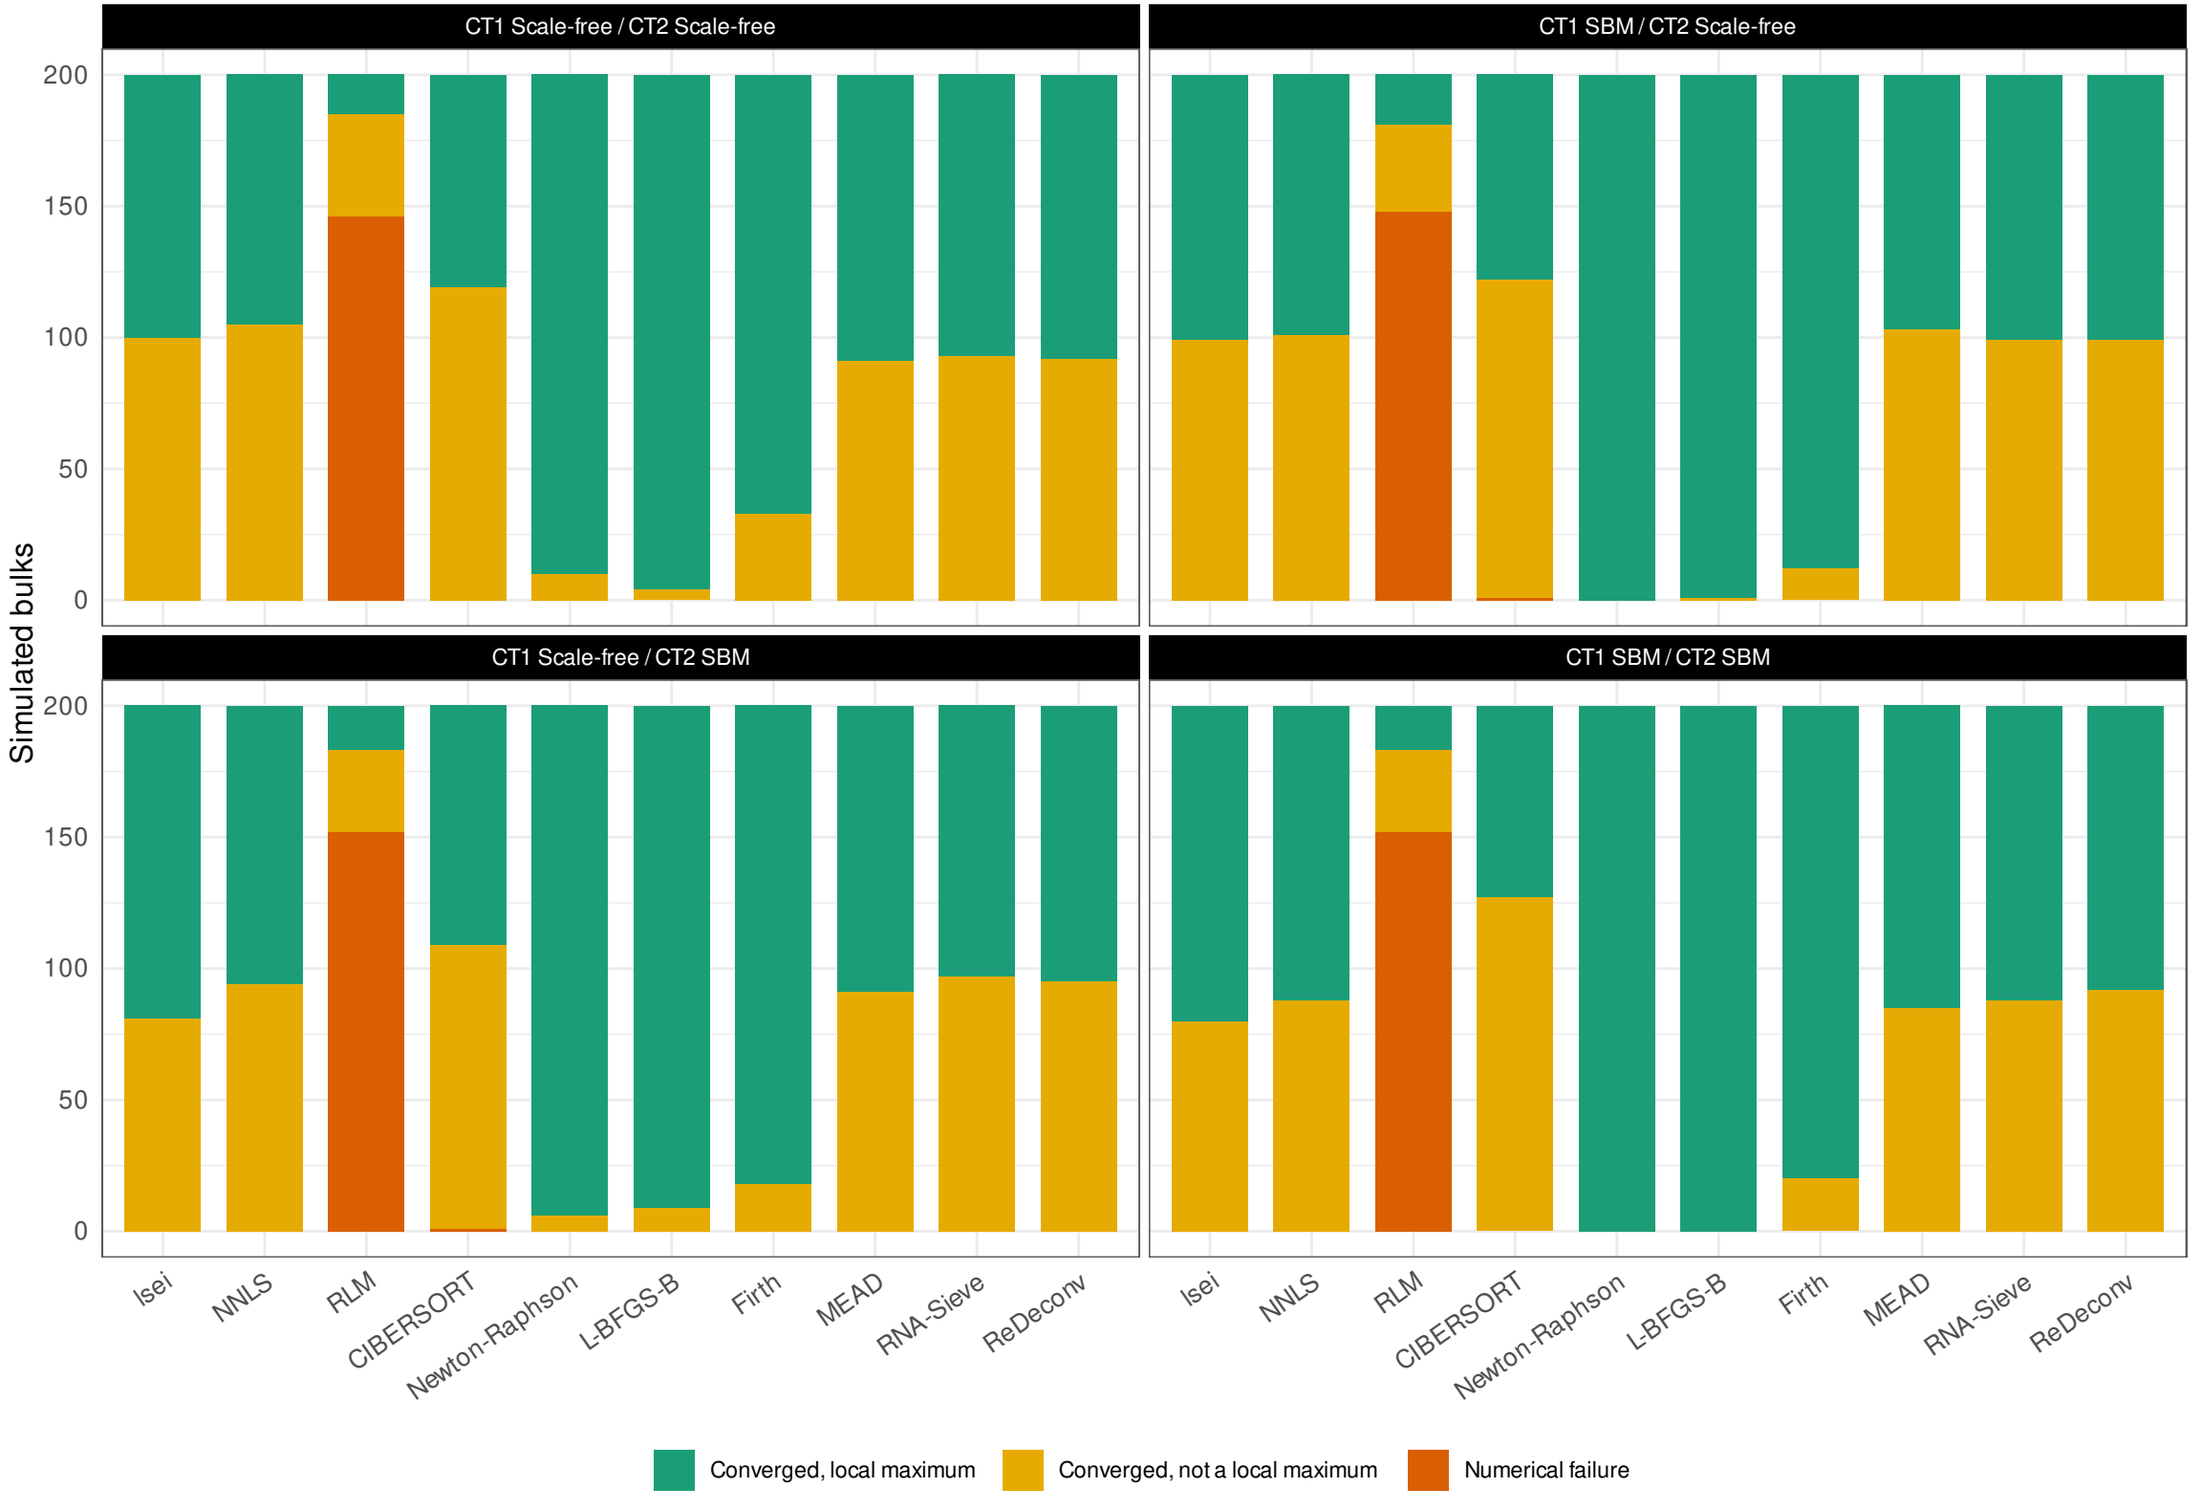

moderately unbalanced / high overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

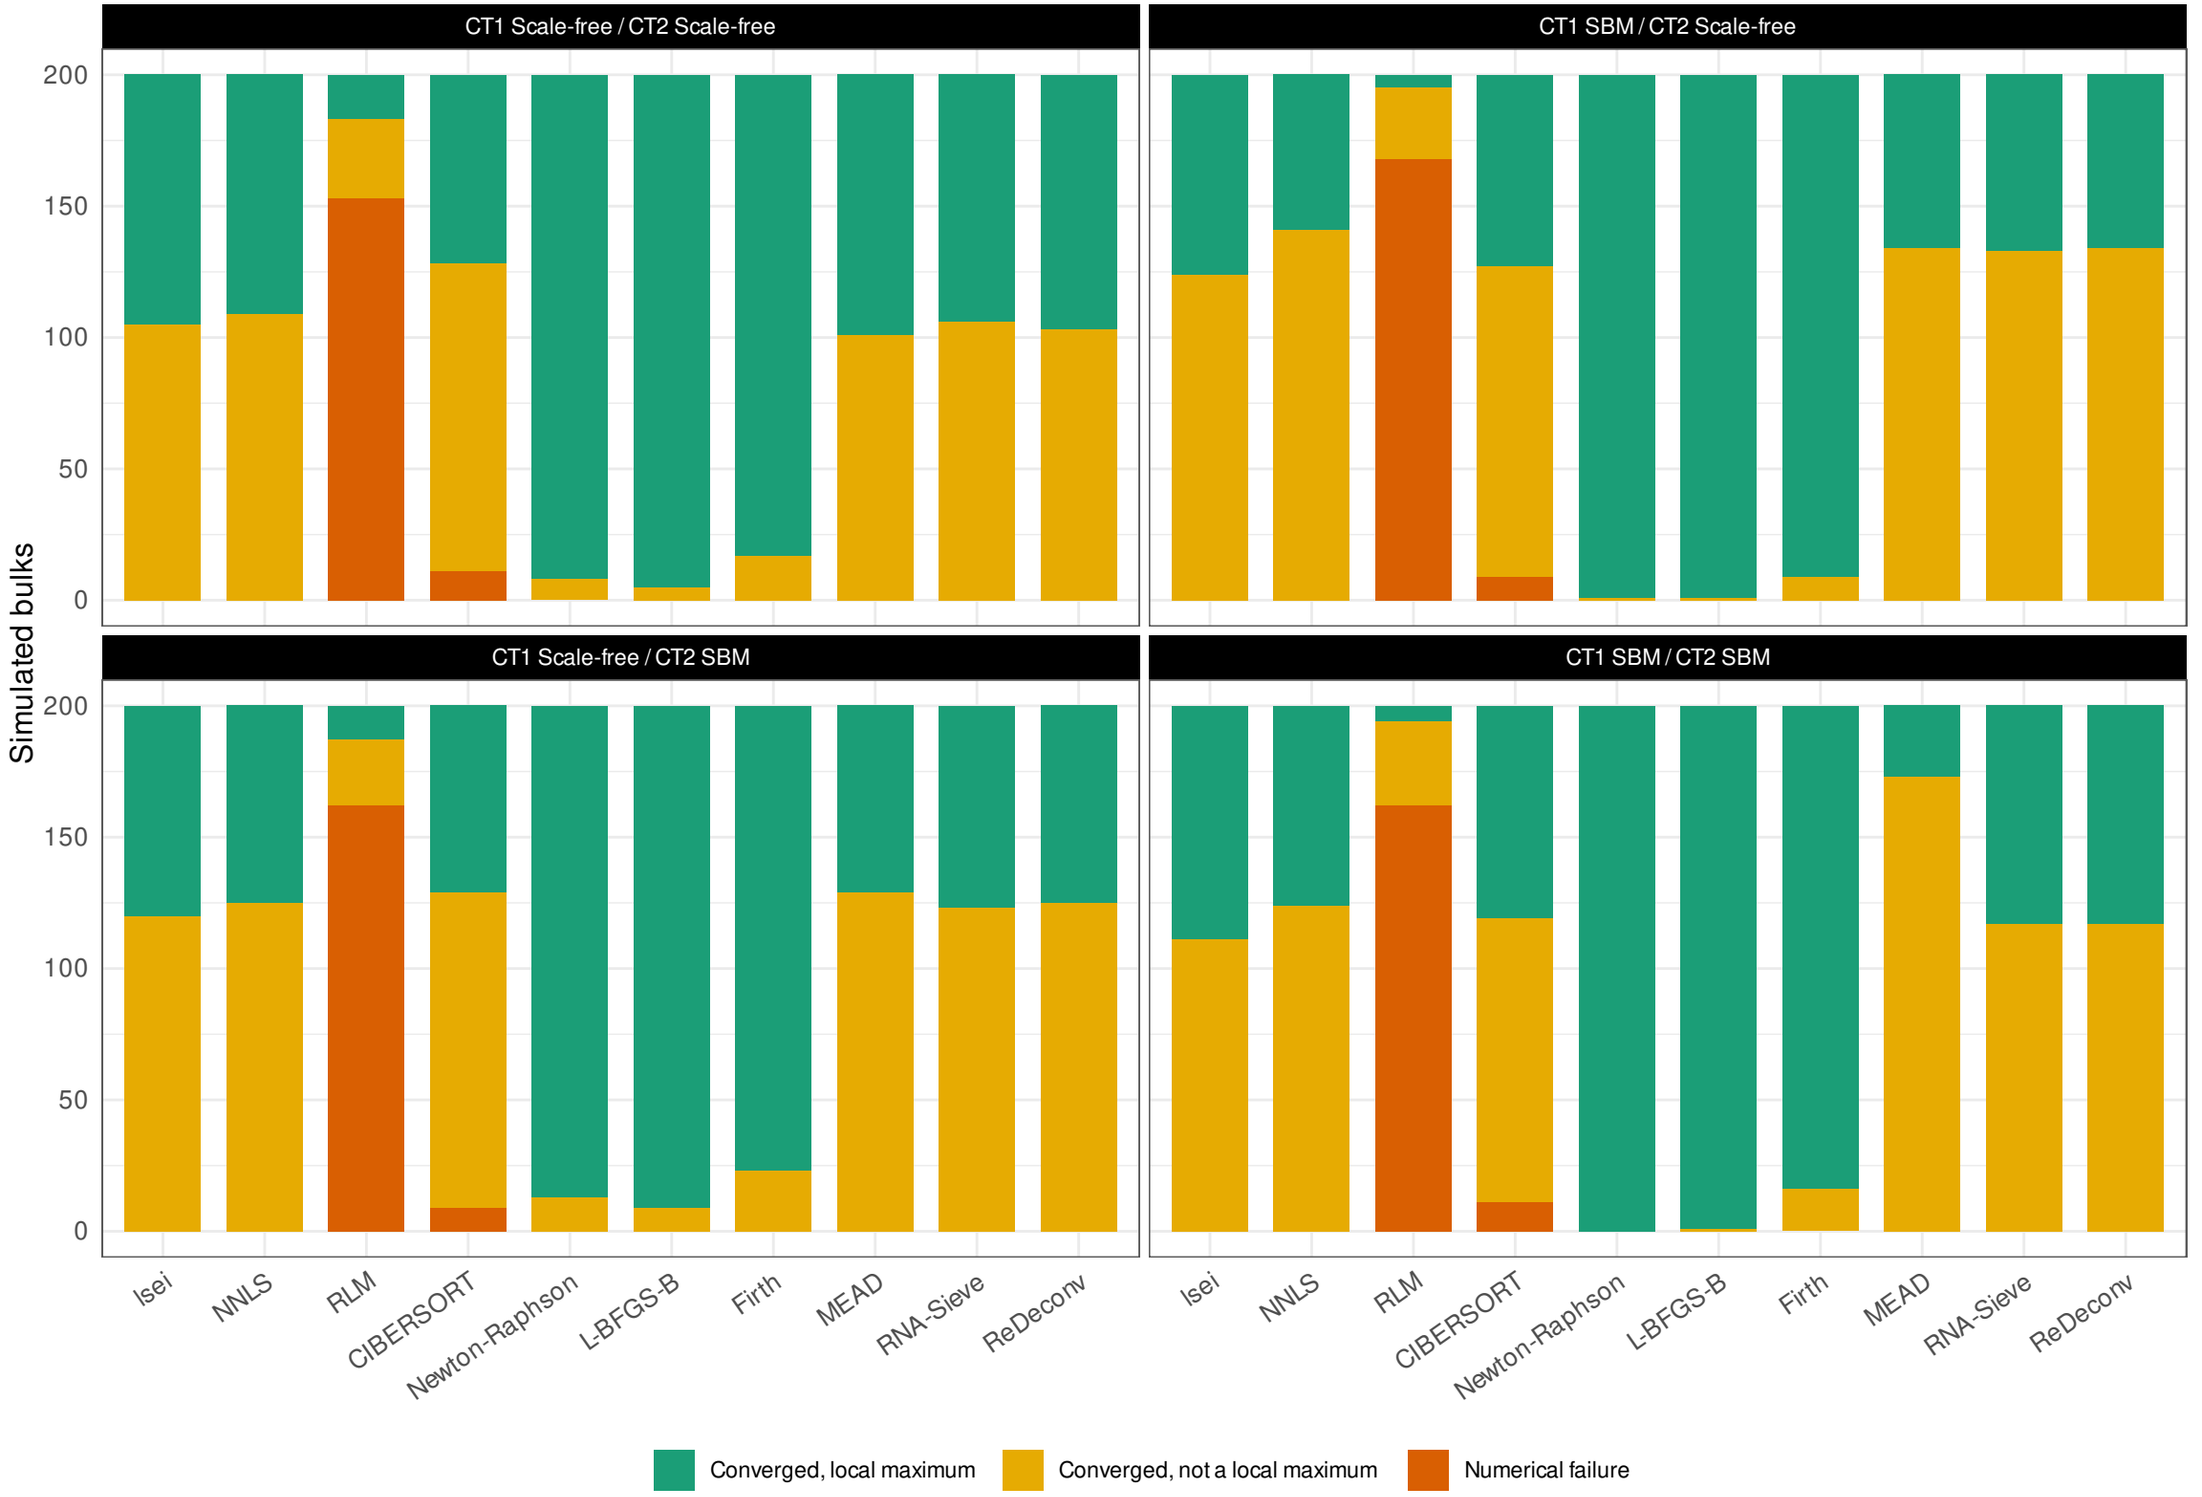

highly unbalanced / low overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

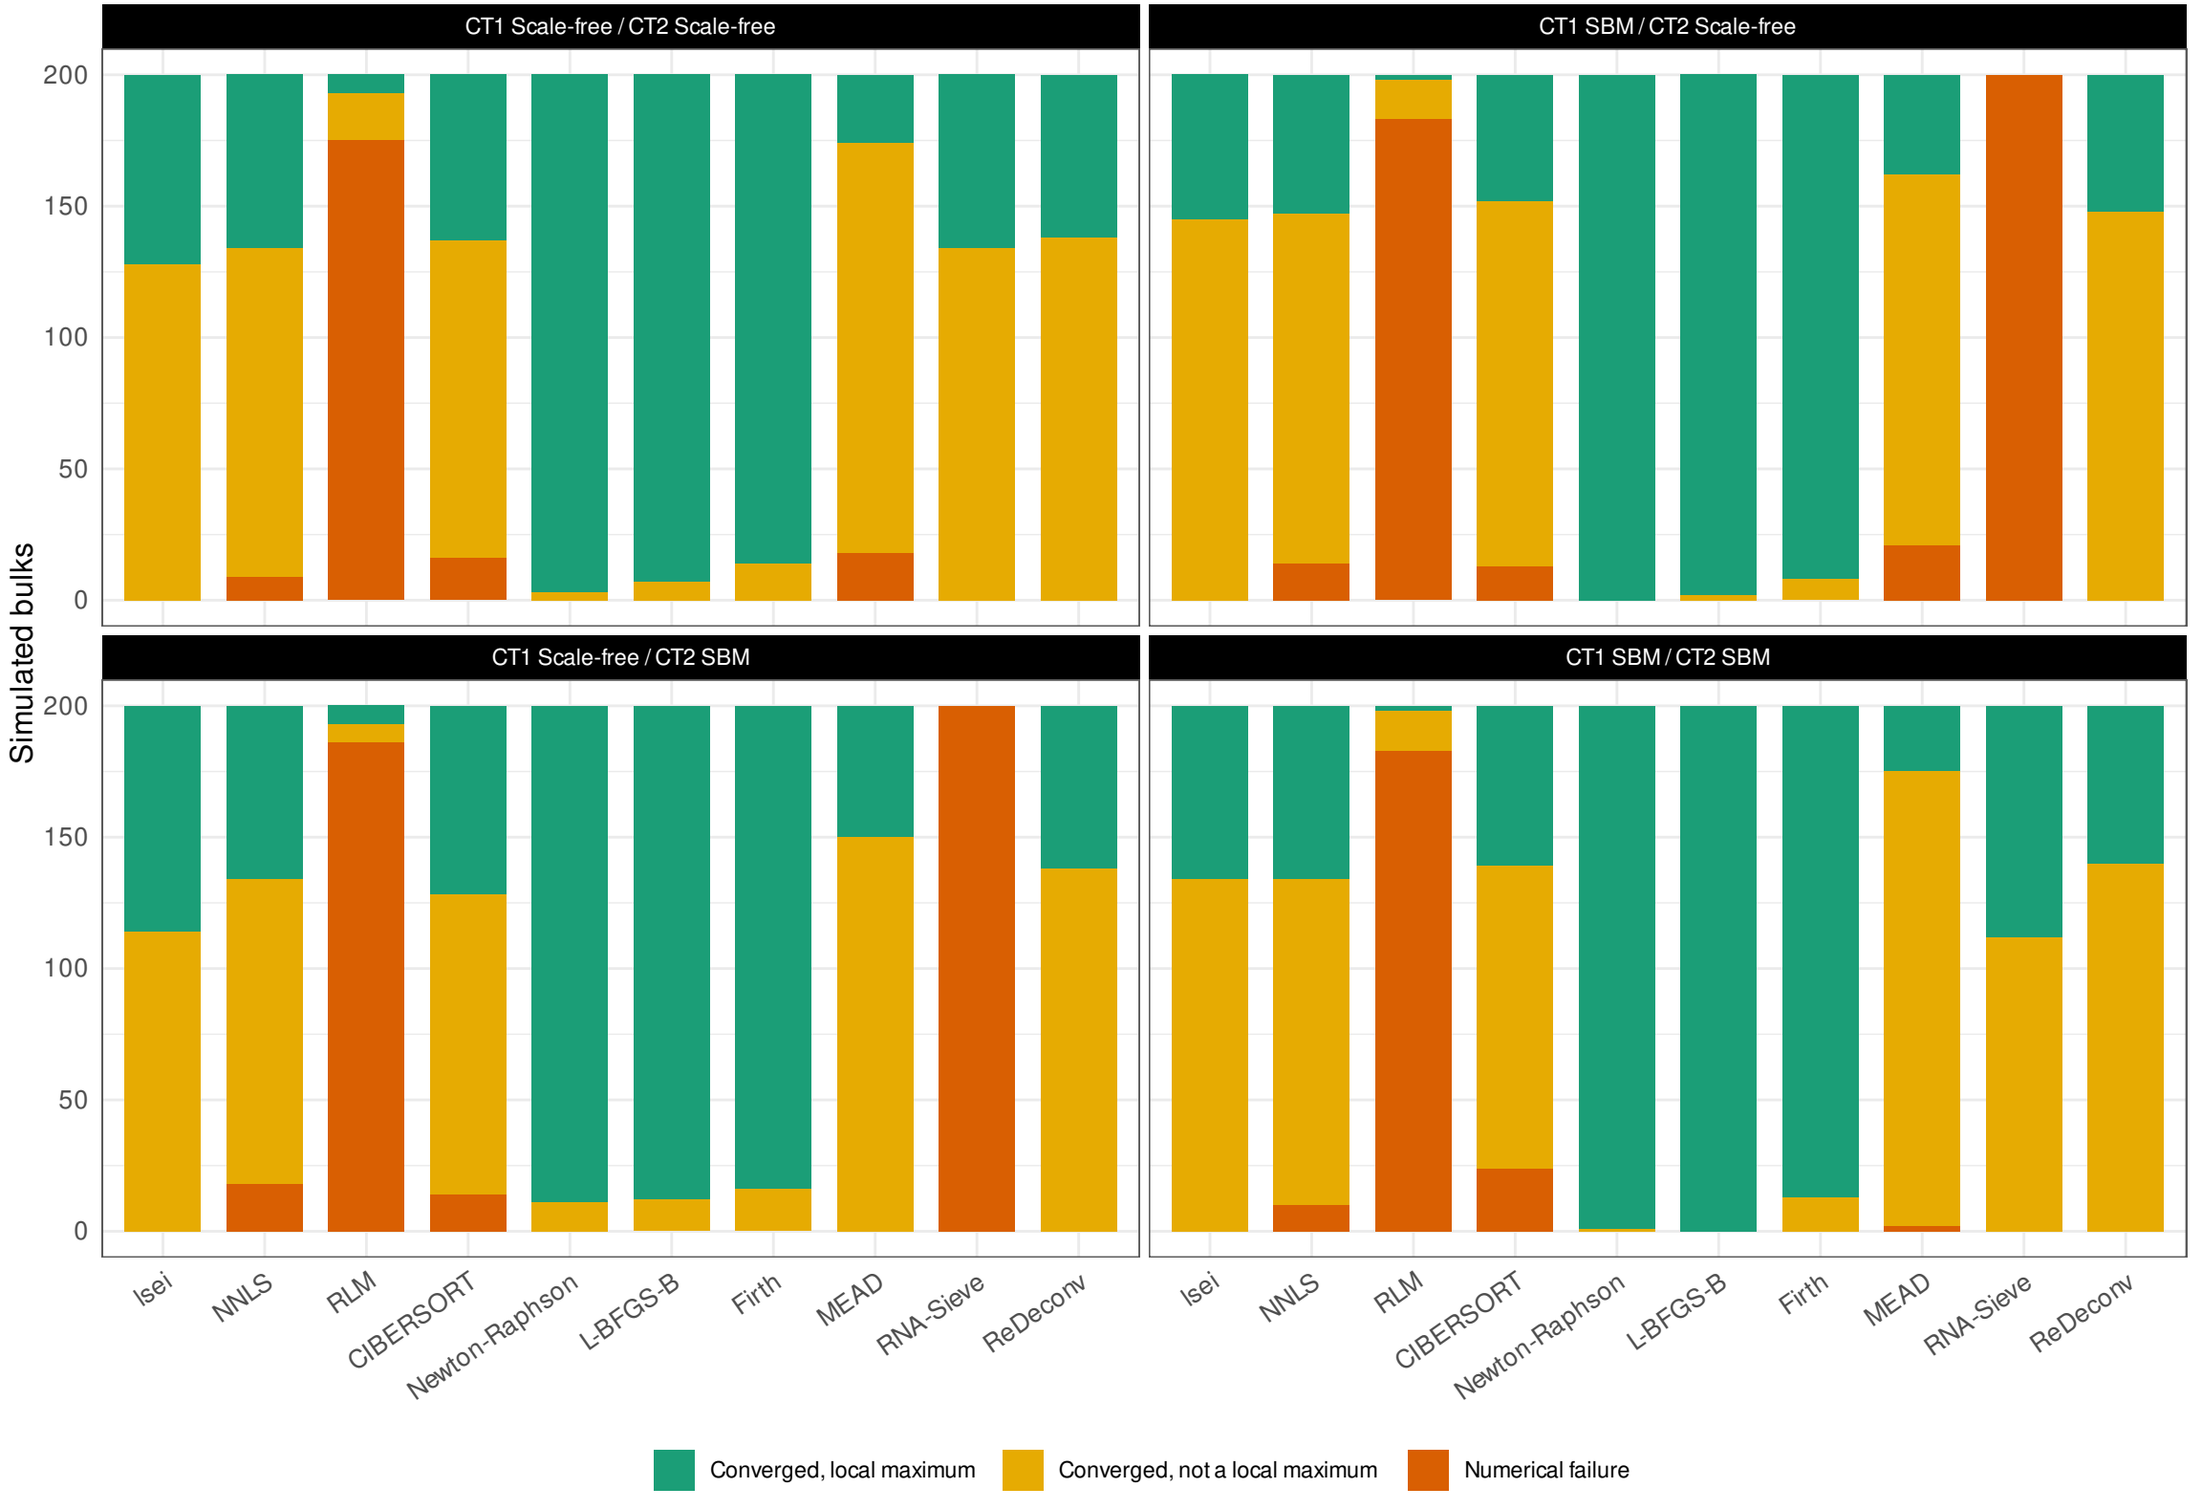

highly unbalanced / moderate overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.

Convergence: theoretical success, theoretical and numerical failures

highly unbalanced / high overlap

Numerical failure: no finite estimate on the simplex. Theoretical failure: a finite estimate that is not a local maximum of the DeCovarT likelihood.
