## Mean Aitchison distance of every method

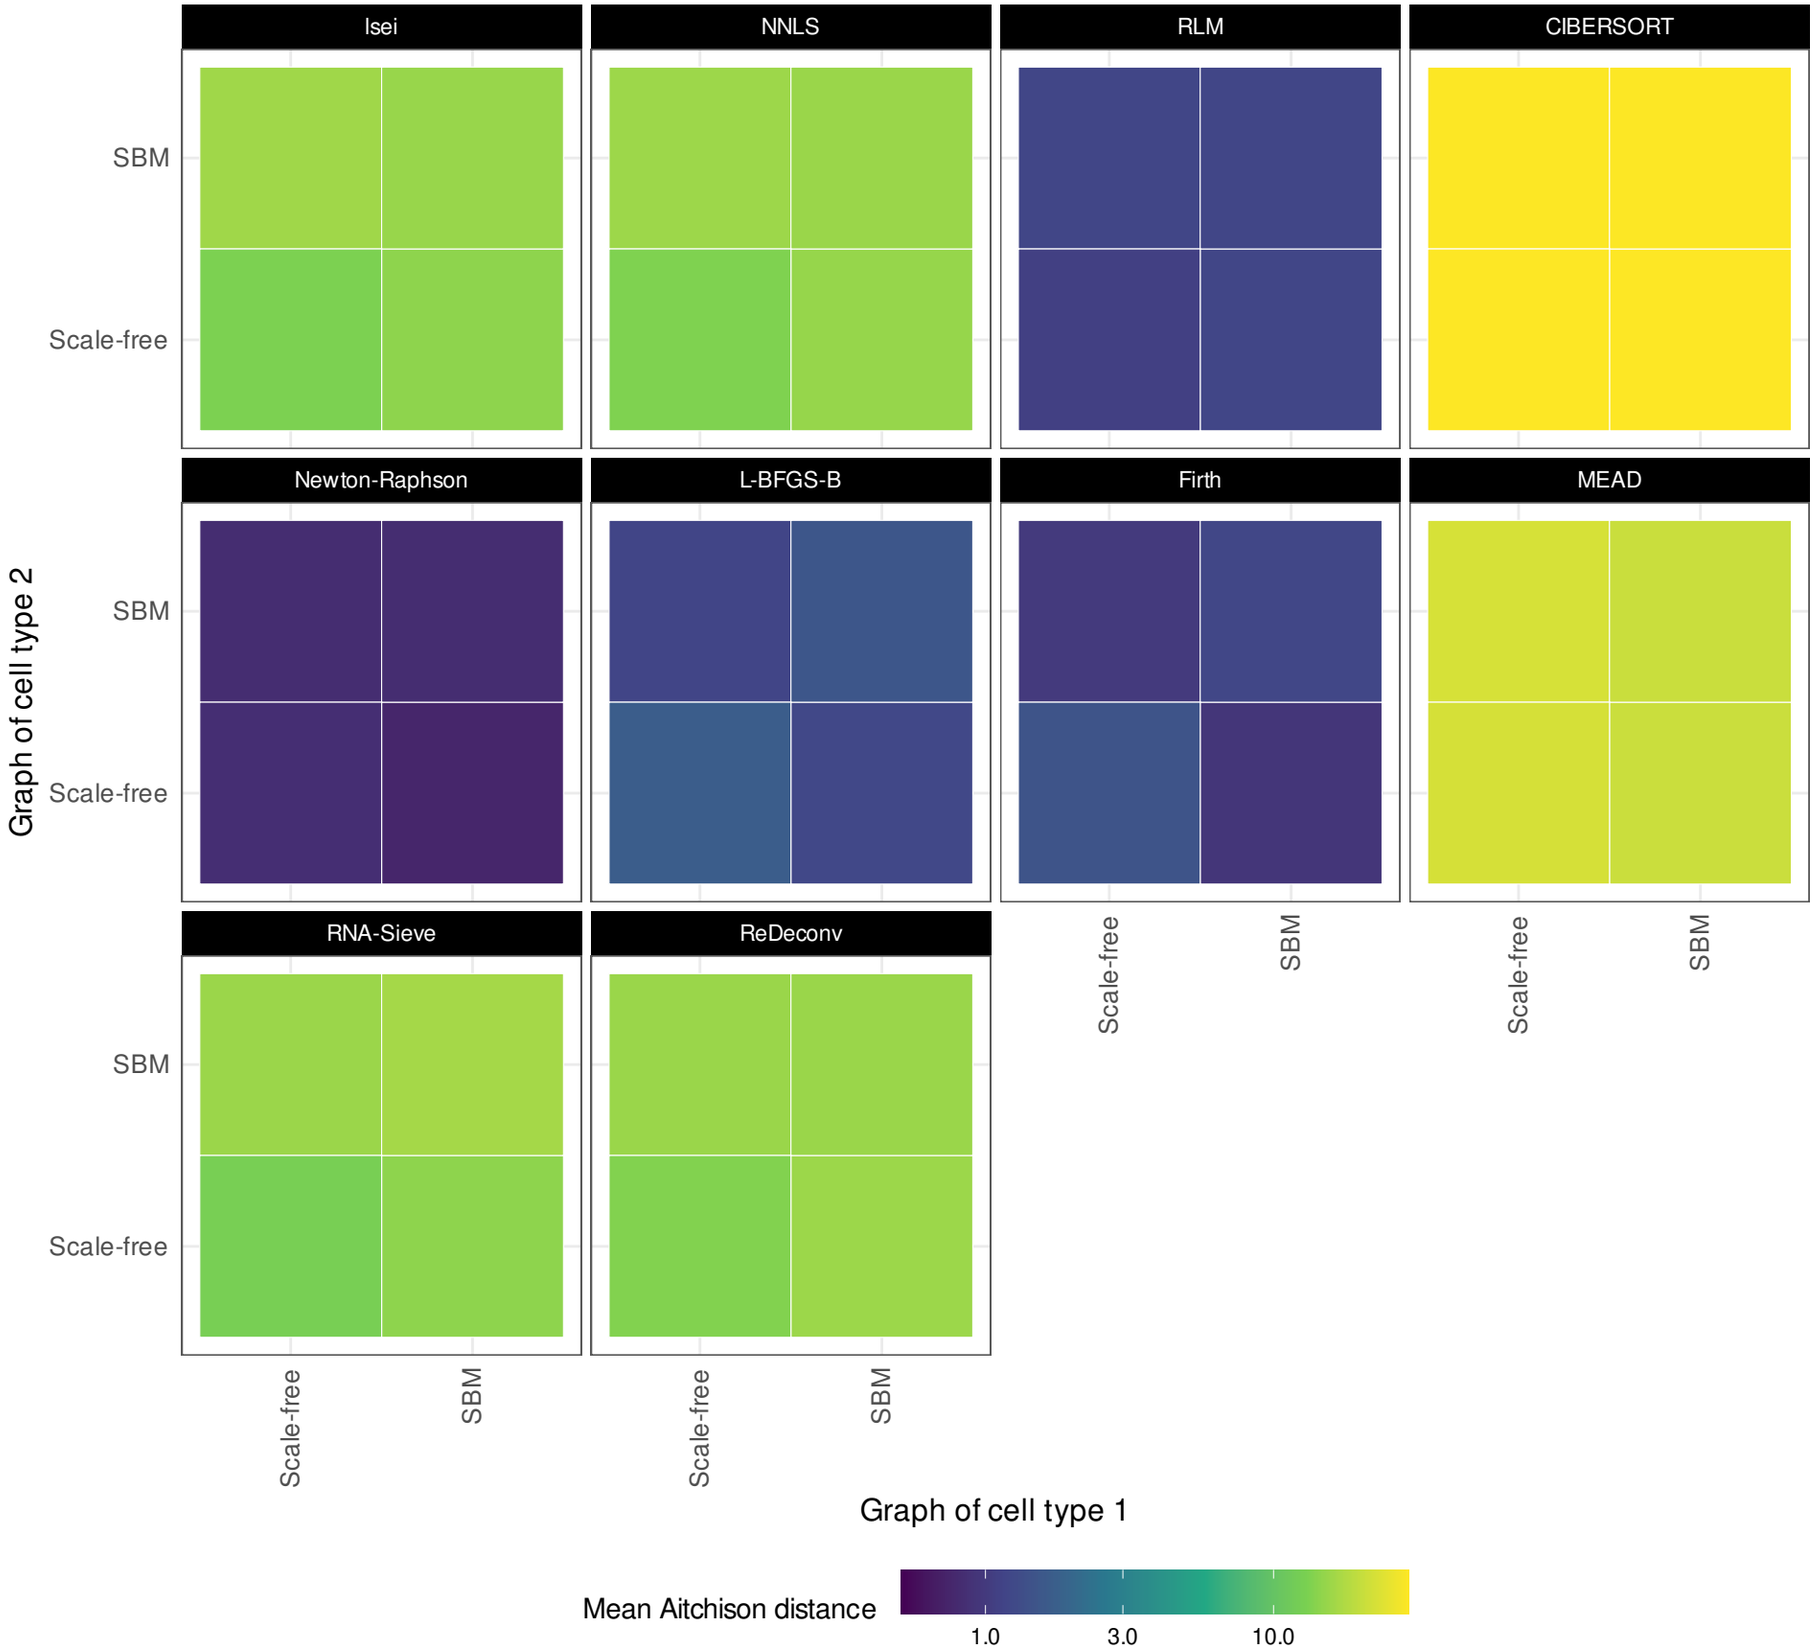

balanced / low overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

## Mean Aitchison distance of every method

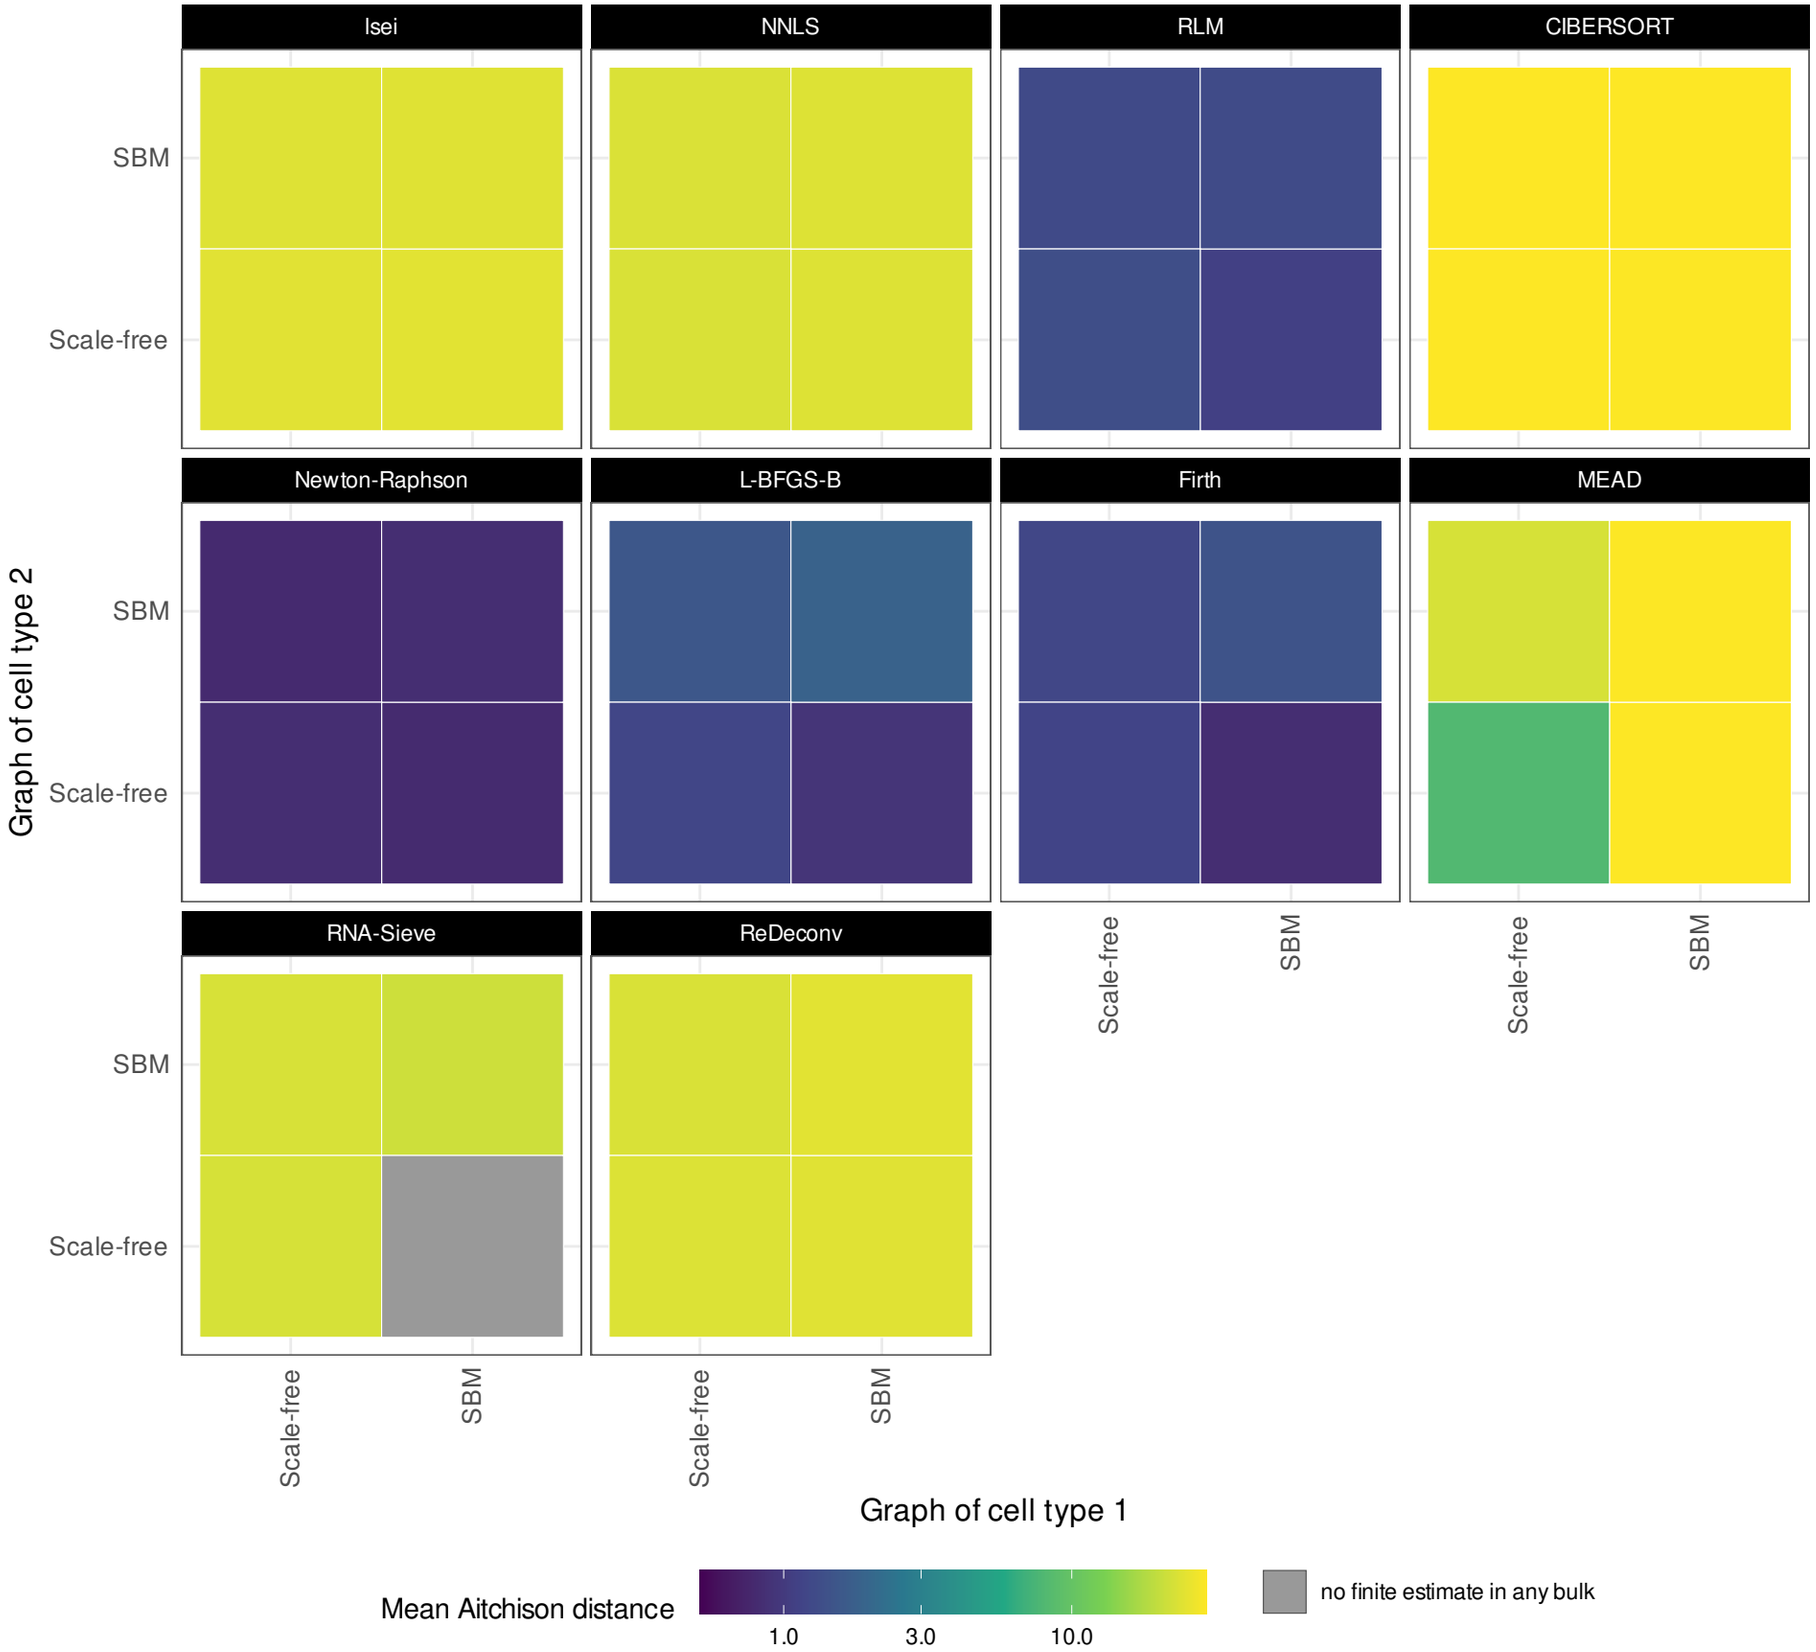

balanced / moderate overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

# Mean Aitchison distance of every method

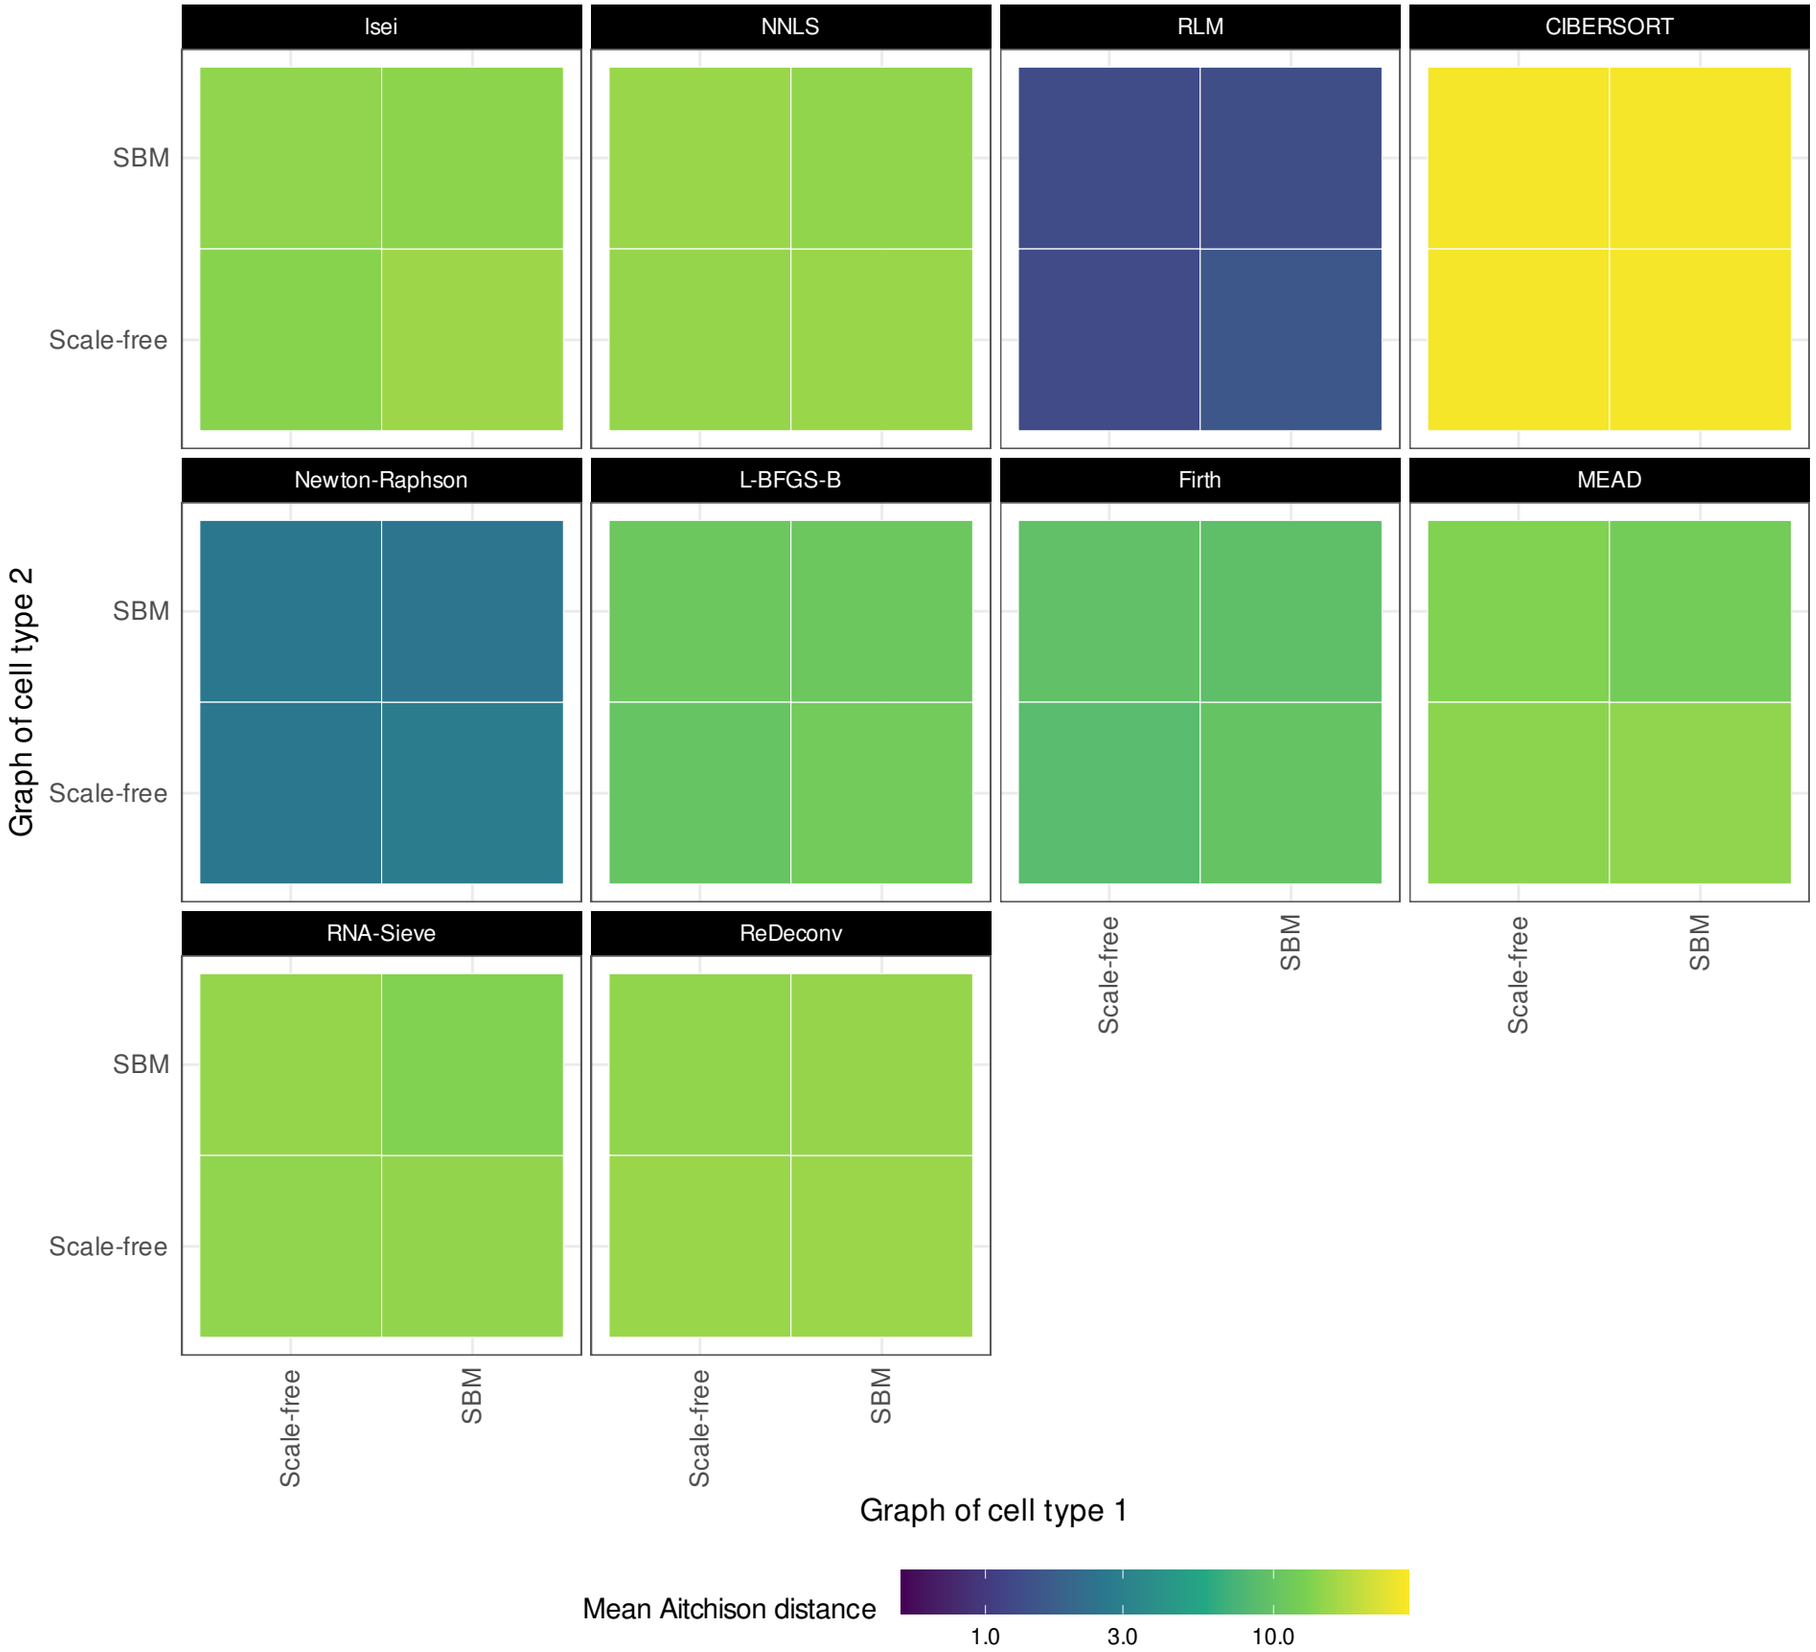

balanced / high overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

# Mean Aitchison distance of every method

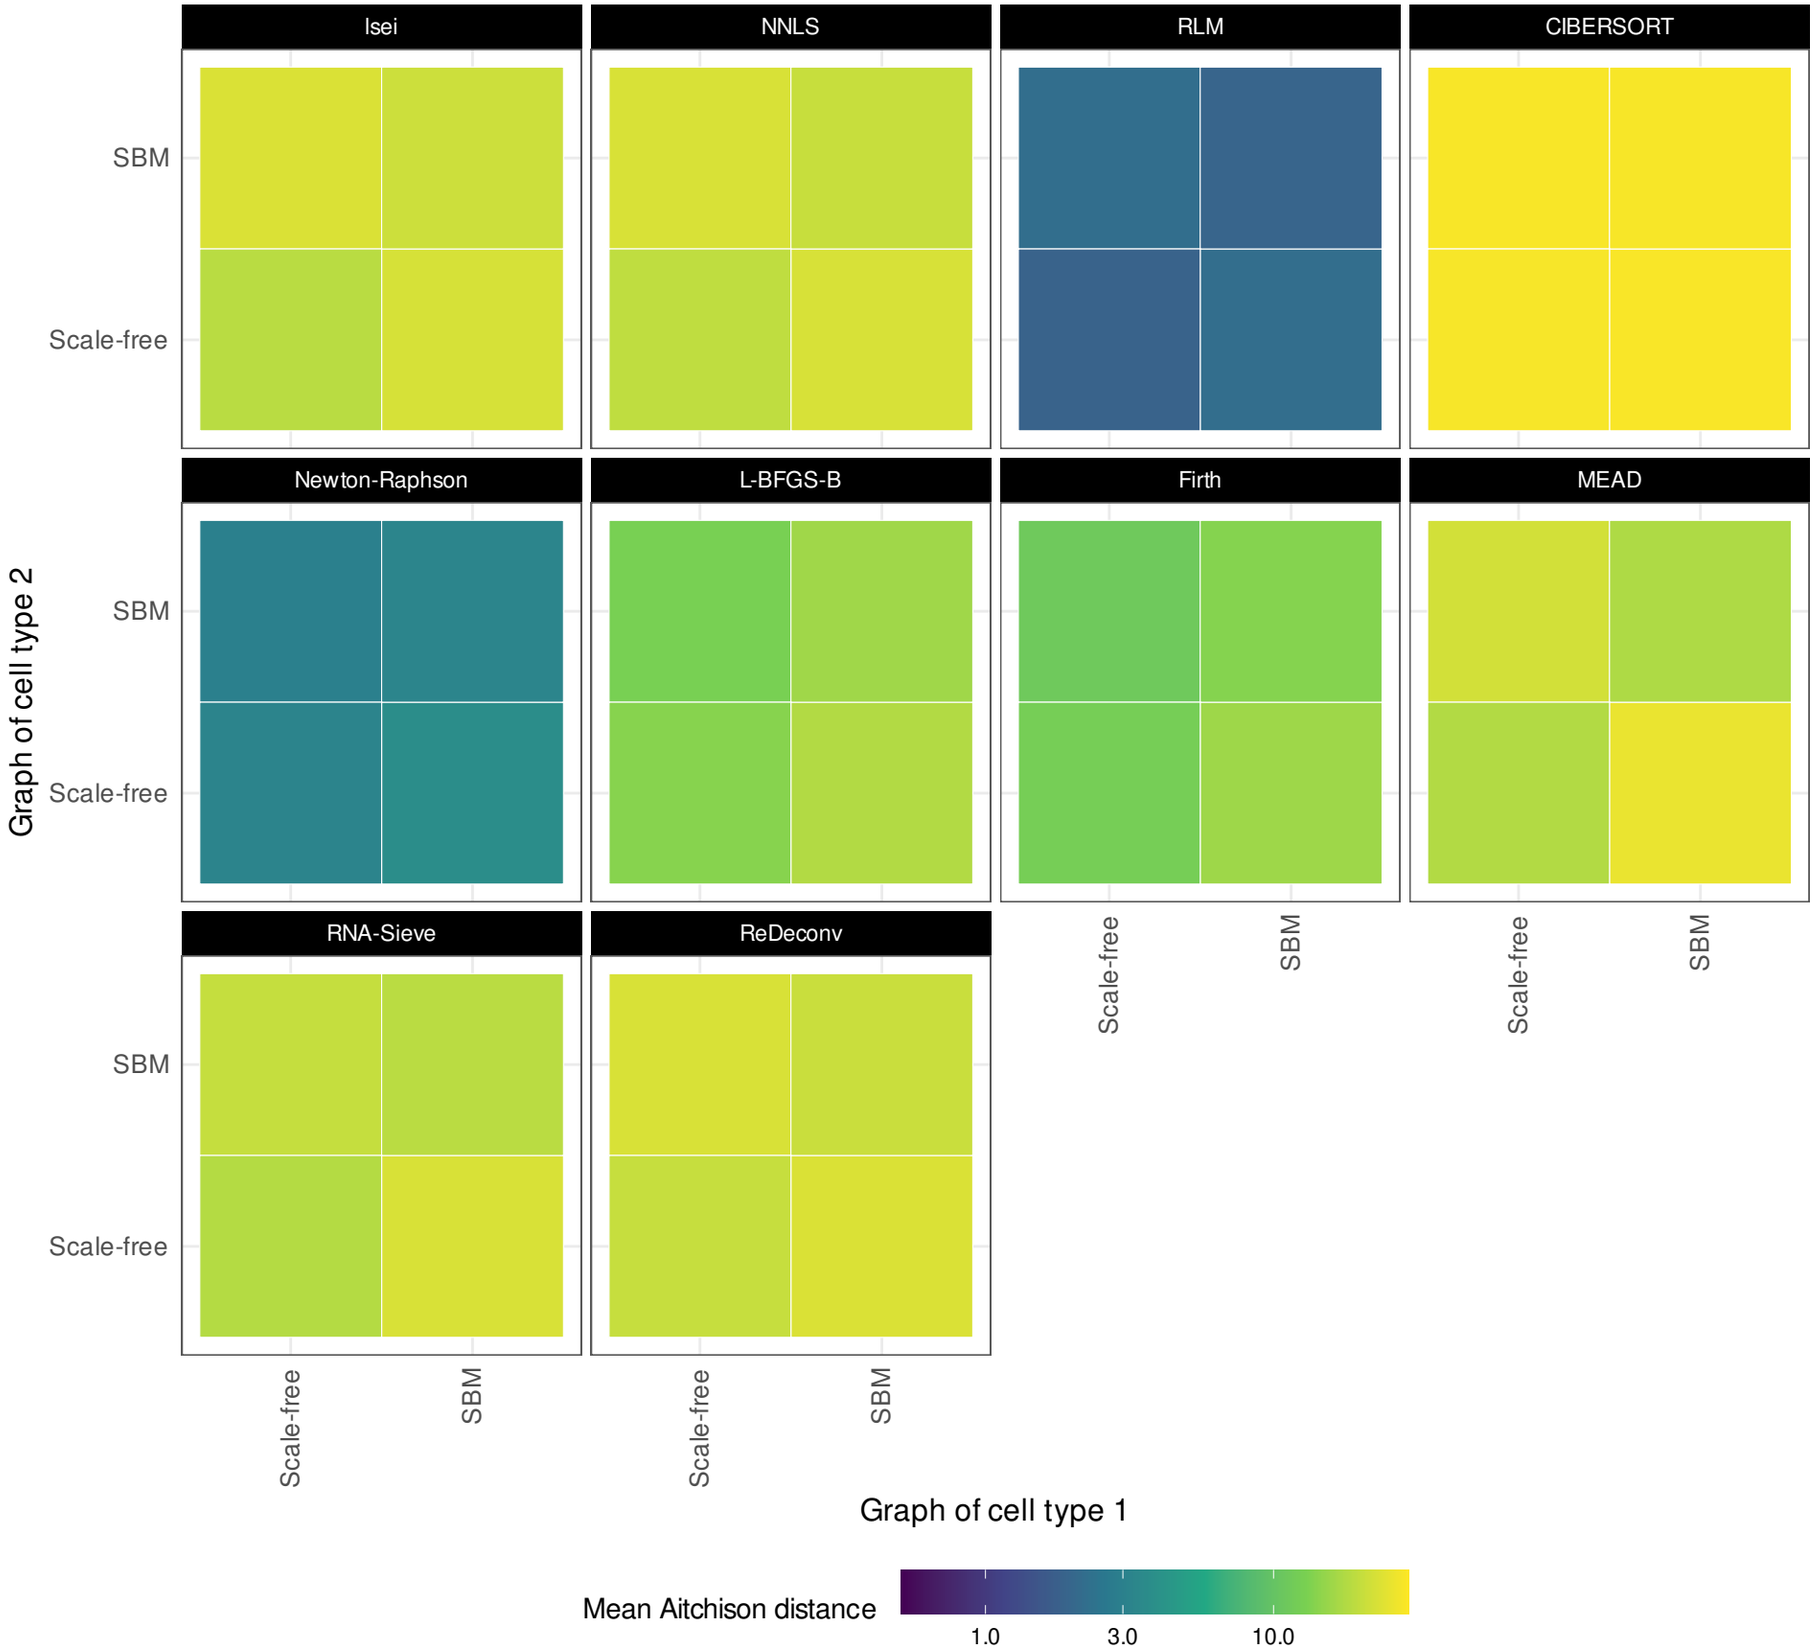

moderately unbalanced / low overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

## Mean Aitchison distance of every method

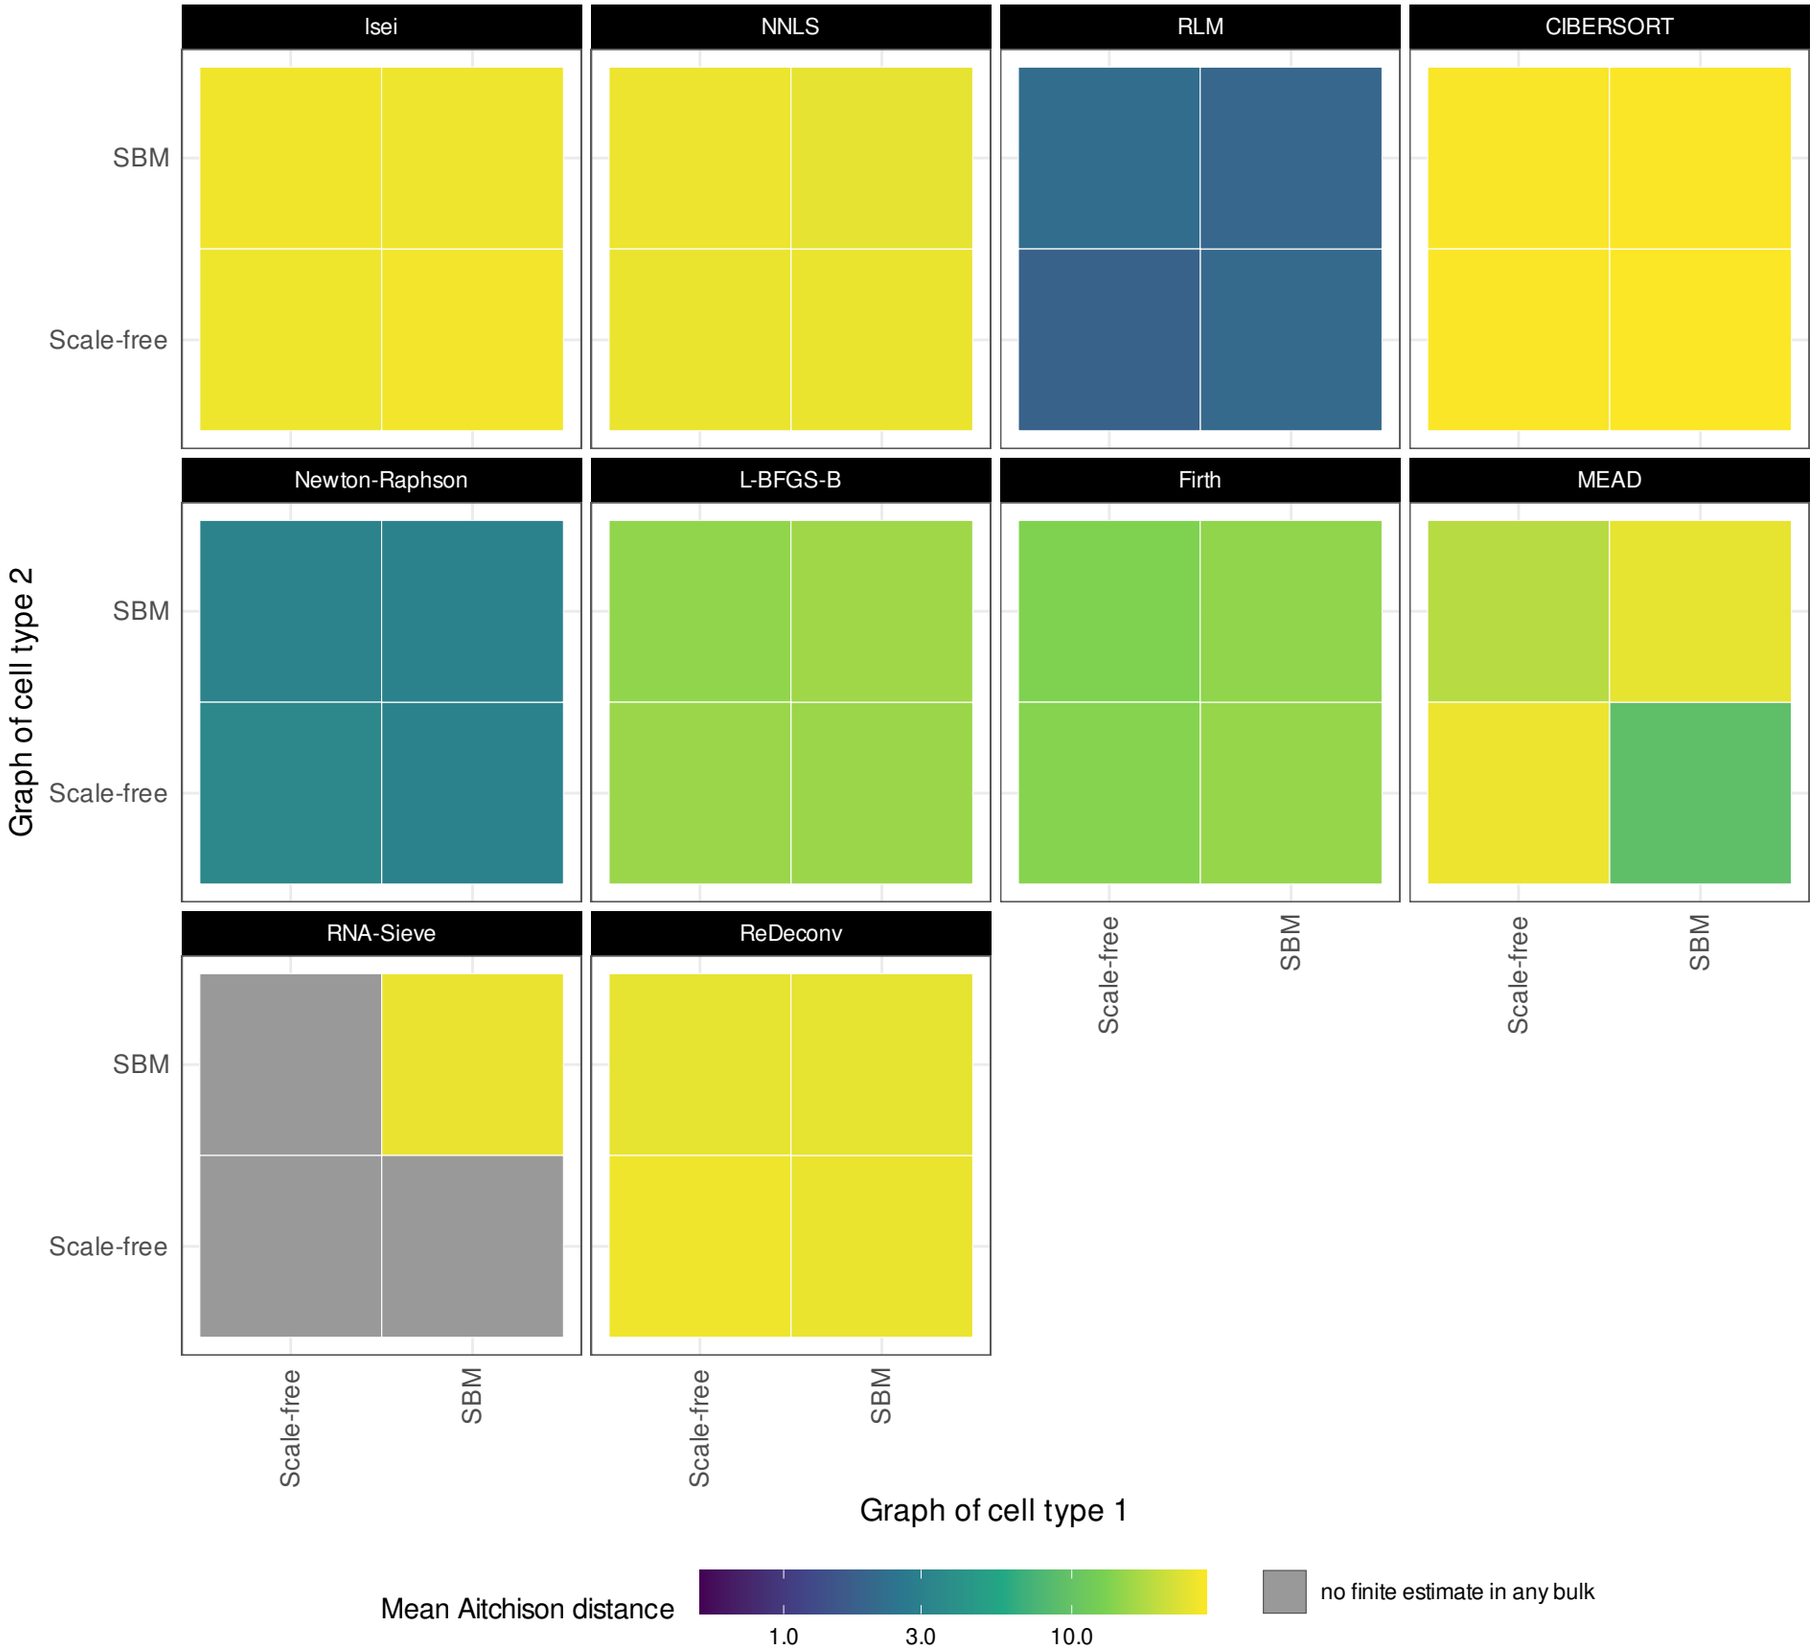

moderately unbalanced / moderate overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

# Mean Aitchison distance of every method

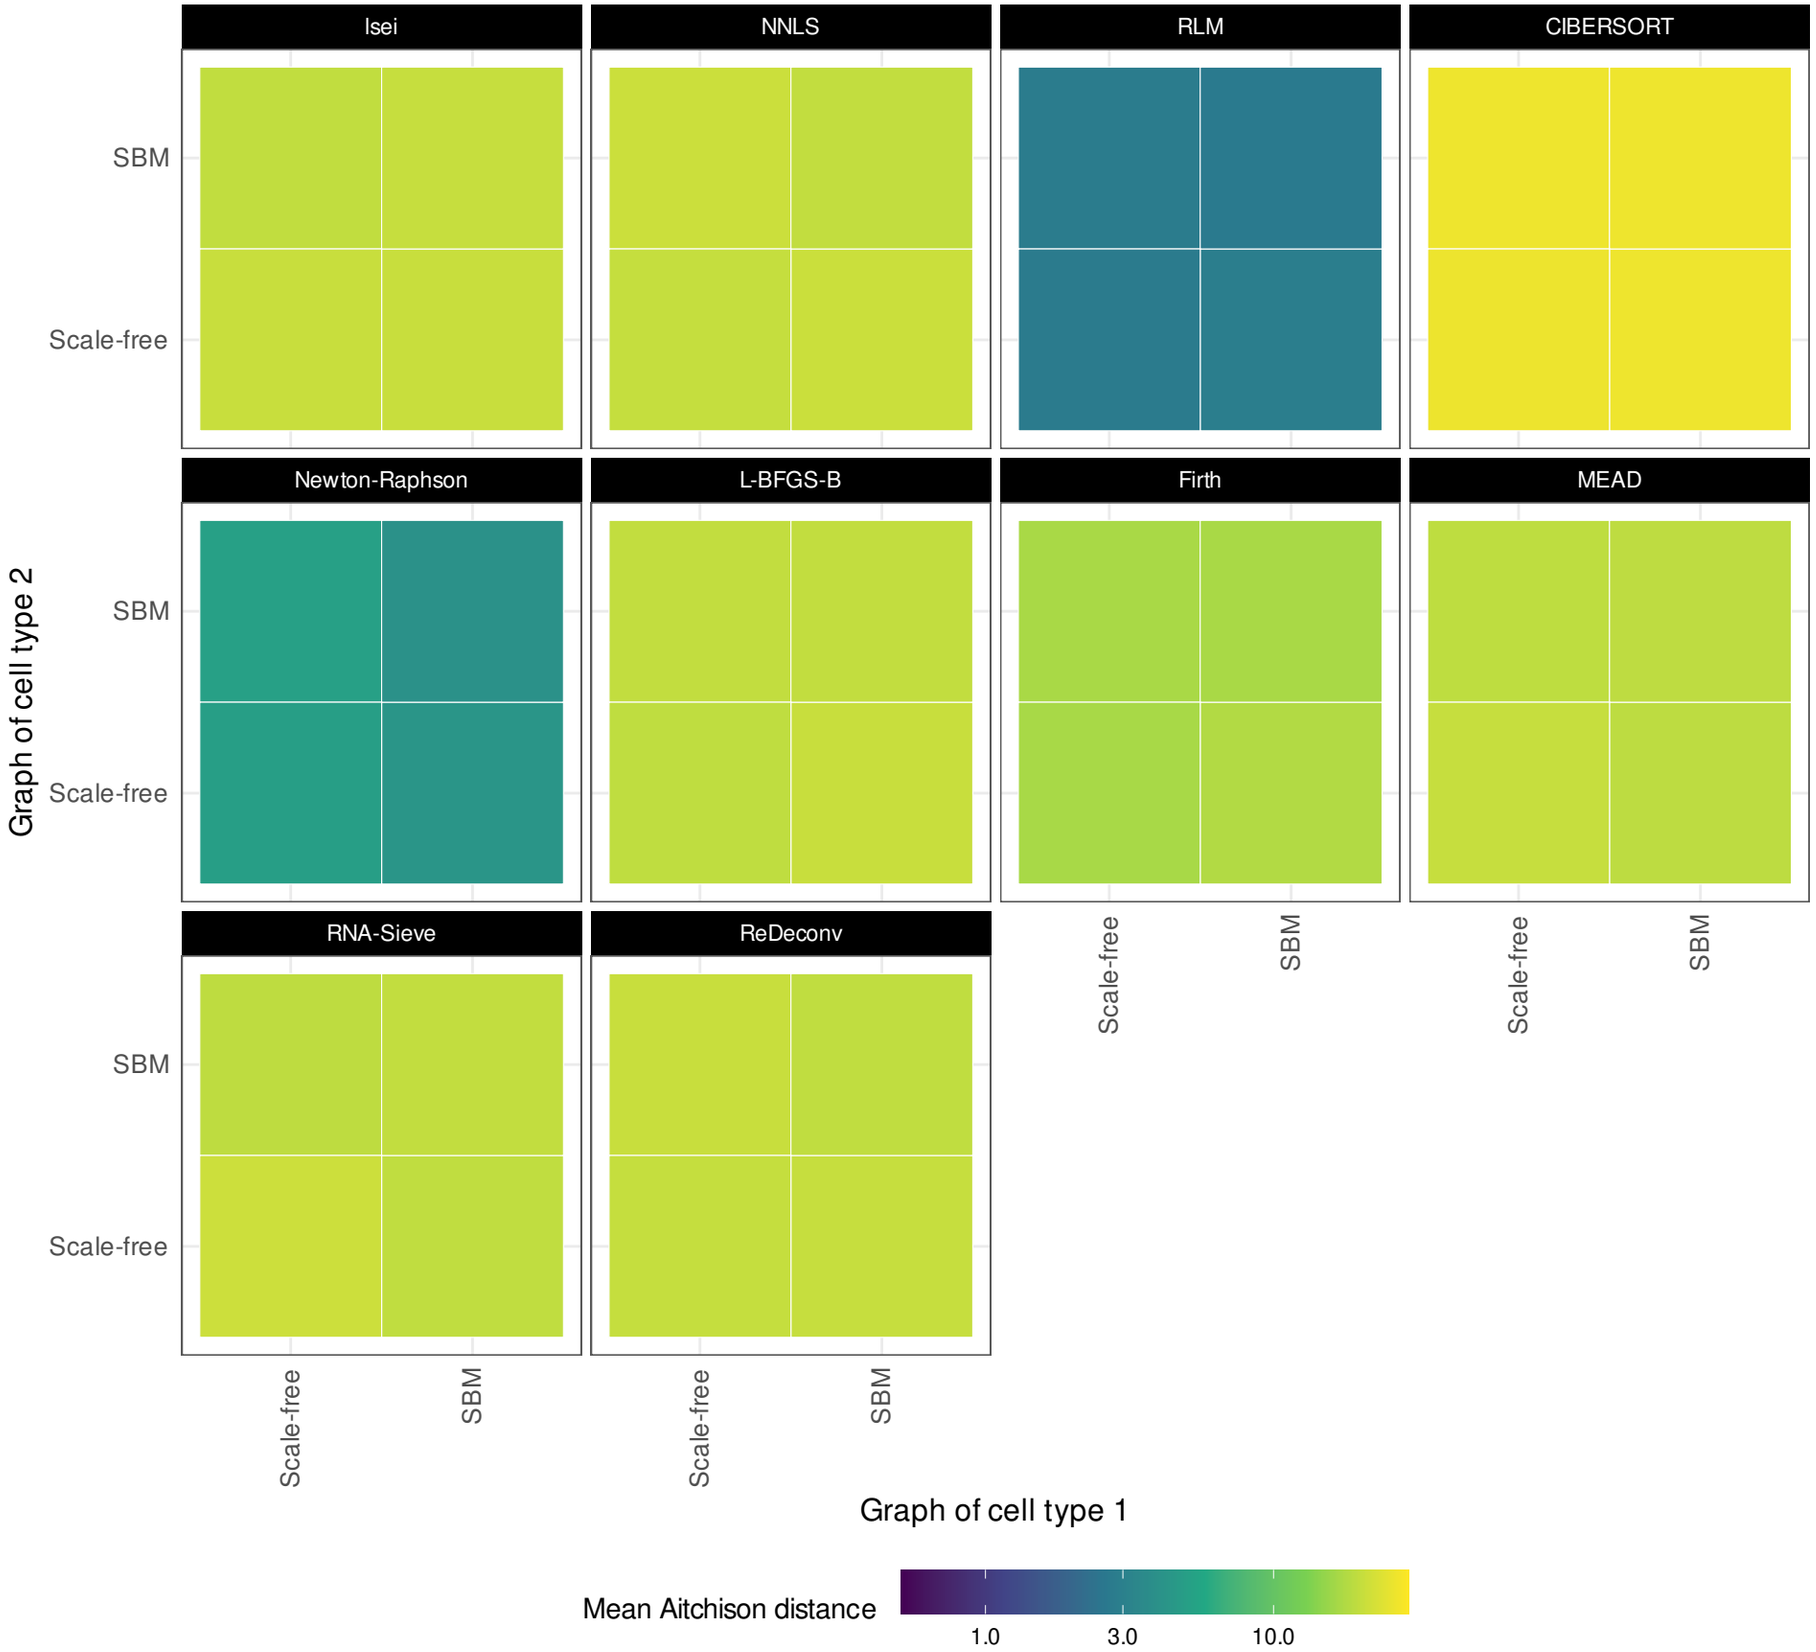

moderately unbalanced / high overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

# Mean Aitchison distance of every method

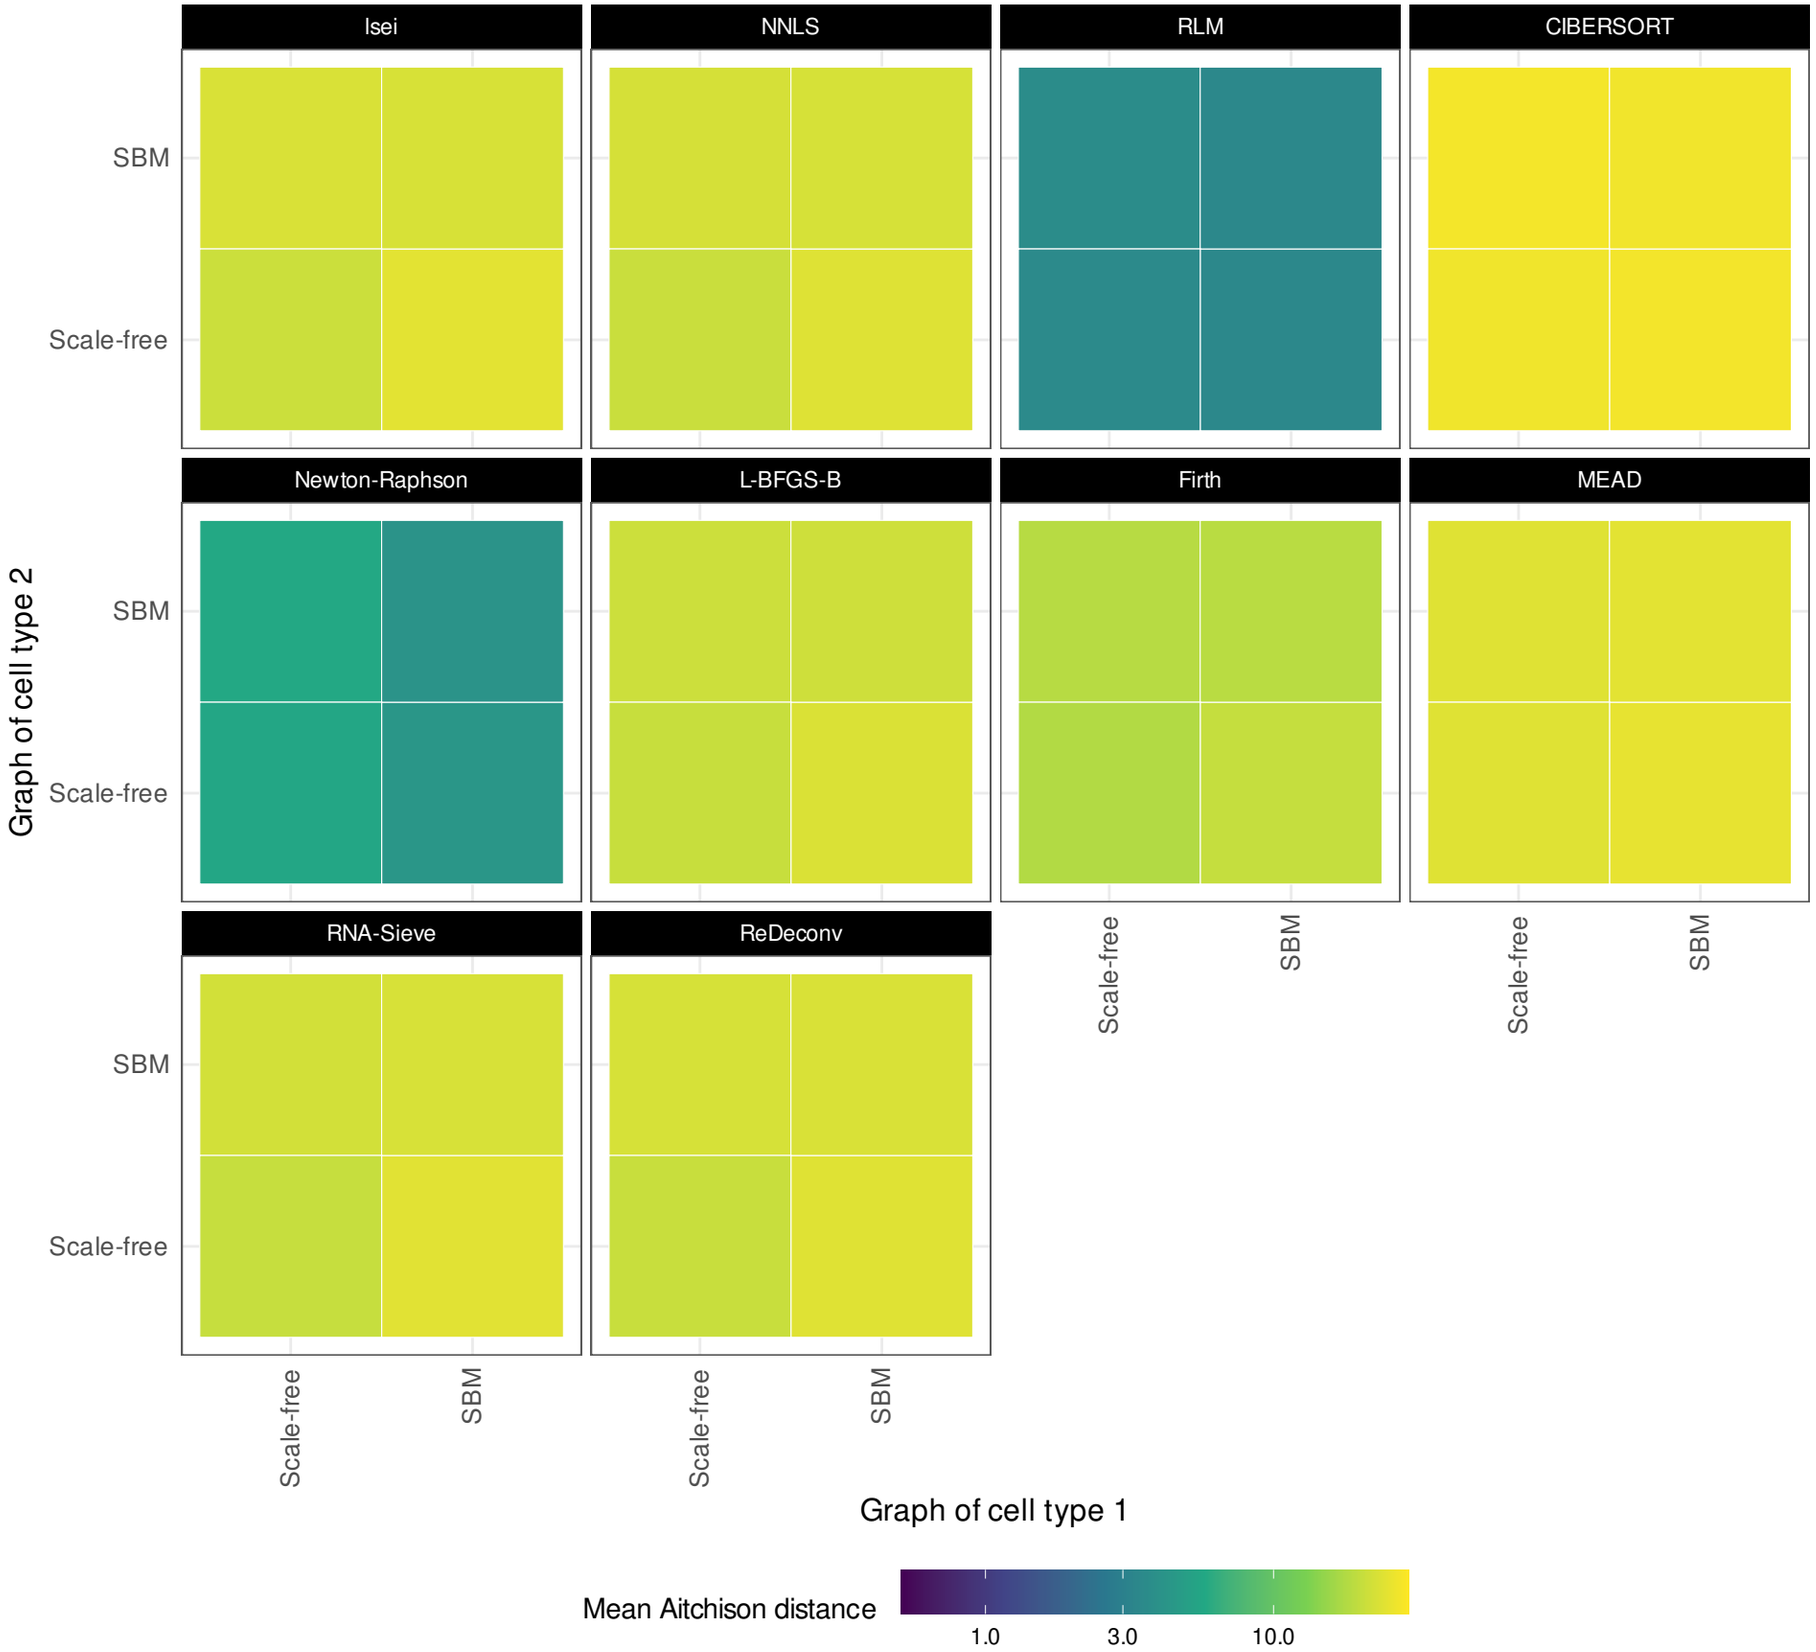

highly unbalanced / low overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

# Mean Aitchison distance of every method

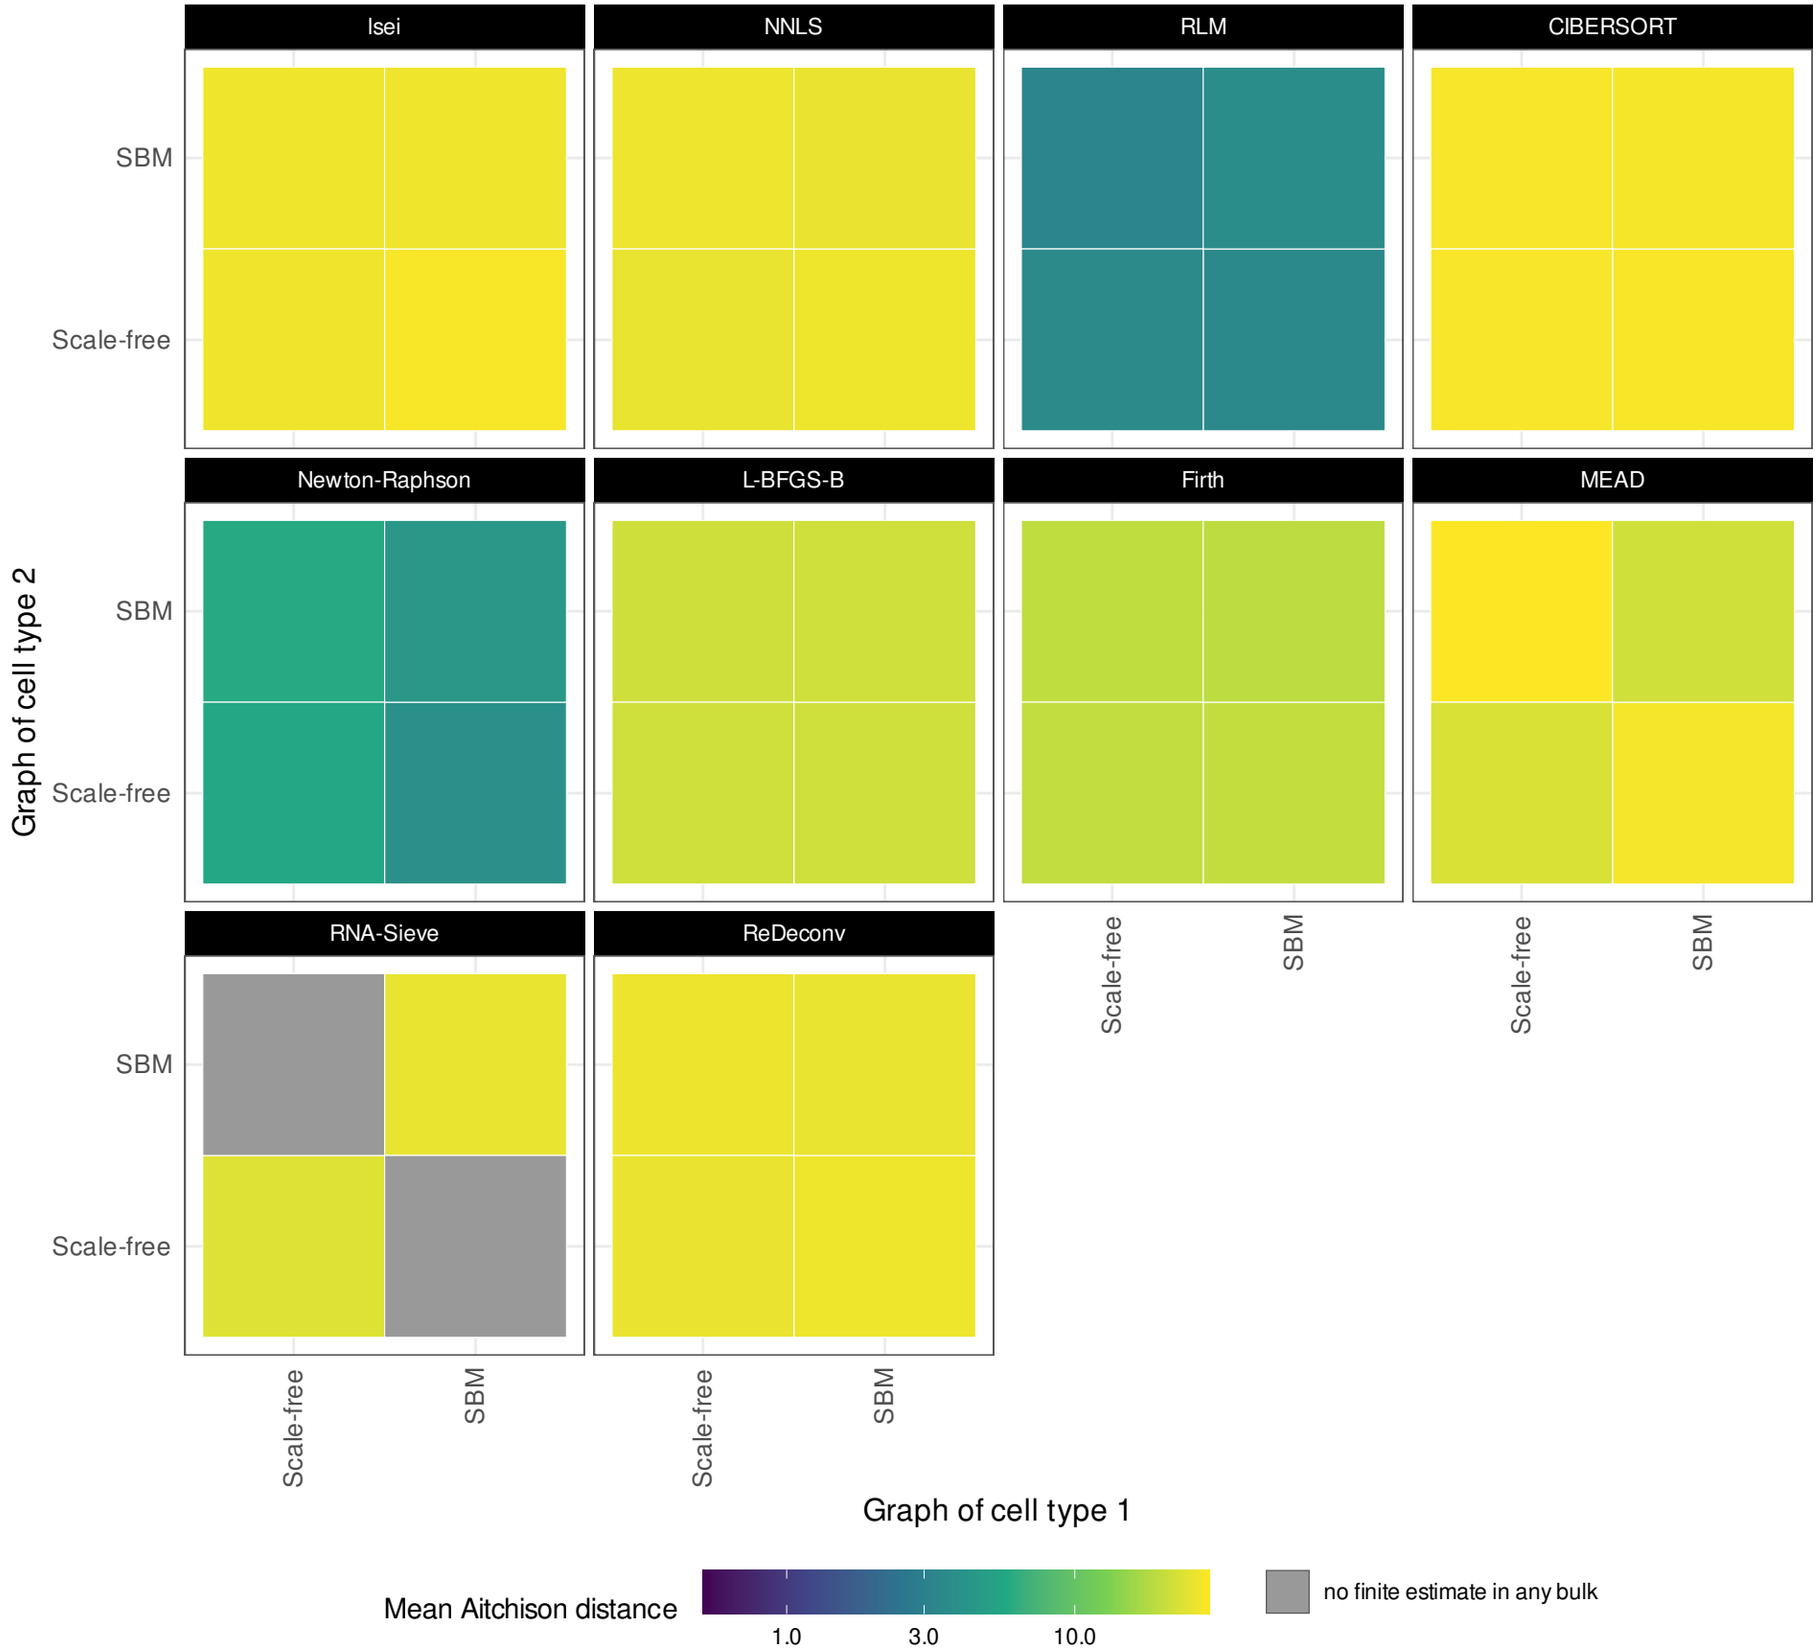

highly unbalanced / moderate overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).

# Mean Aitchison distance of every method

highly unbalanced / high overlap

Mean over the simulated bulks of each scenario; one colour scale (log10) for every page.
Grey tile: the method returned no finite estimate for any bulk of that scenario (solver failure).
