First-order optimality of every estimate

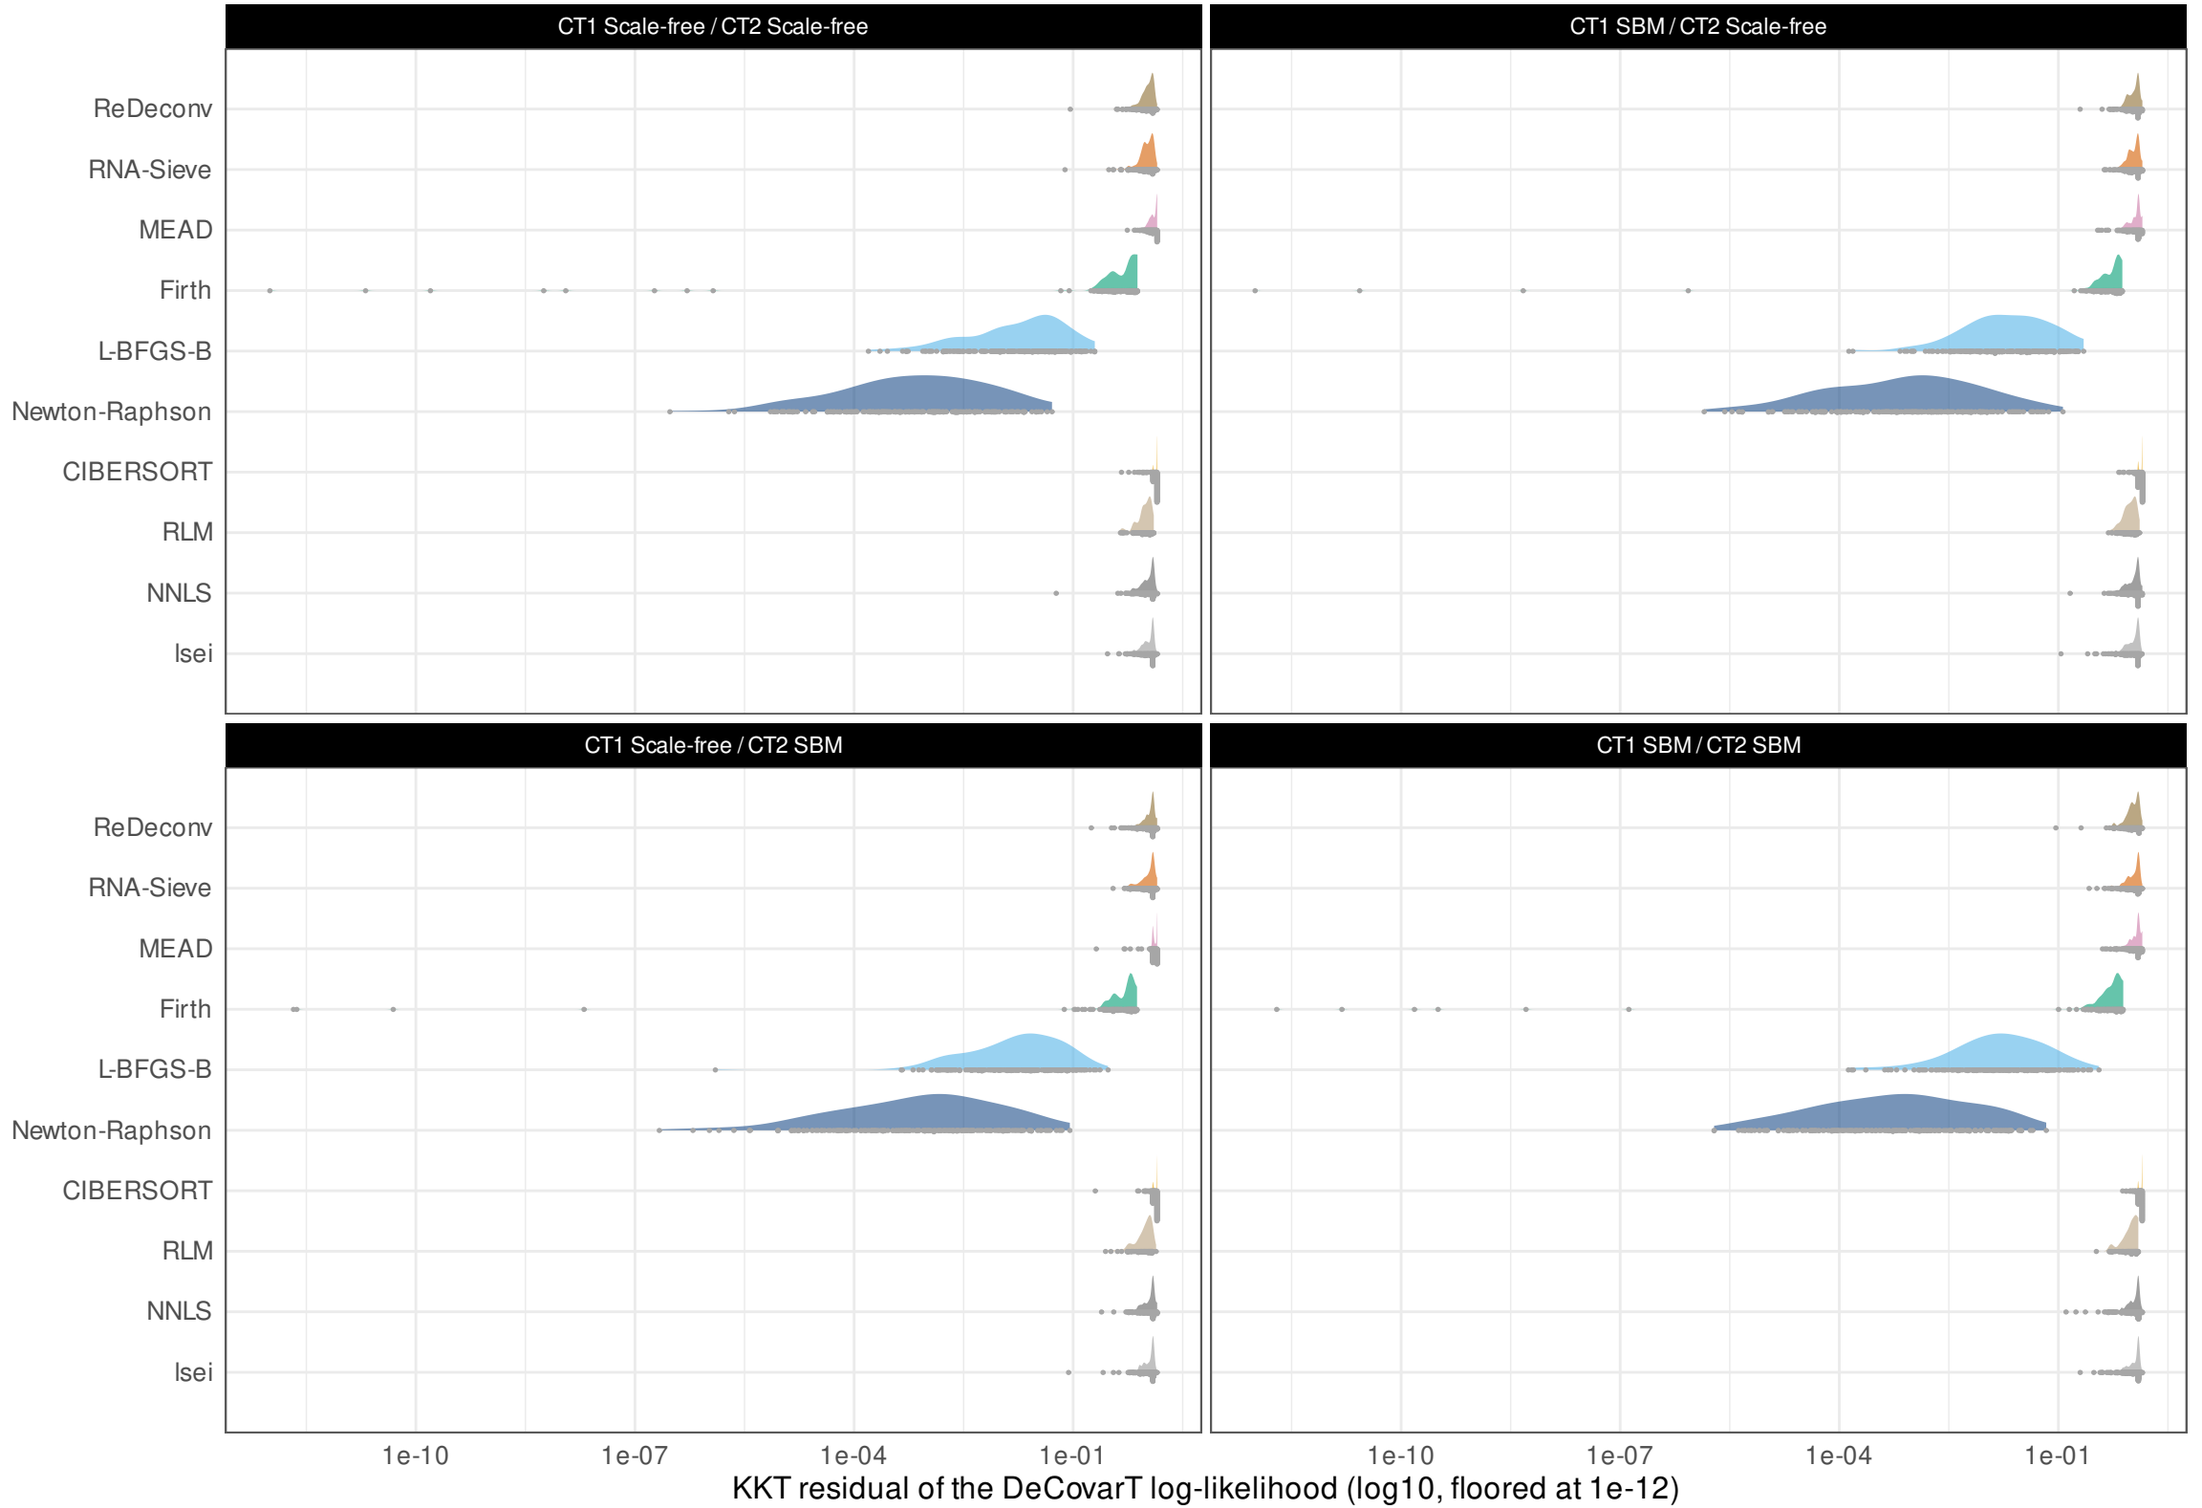

balanced / low overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

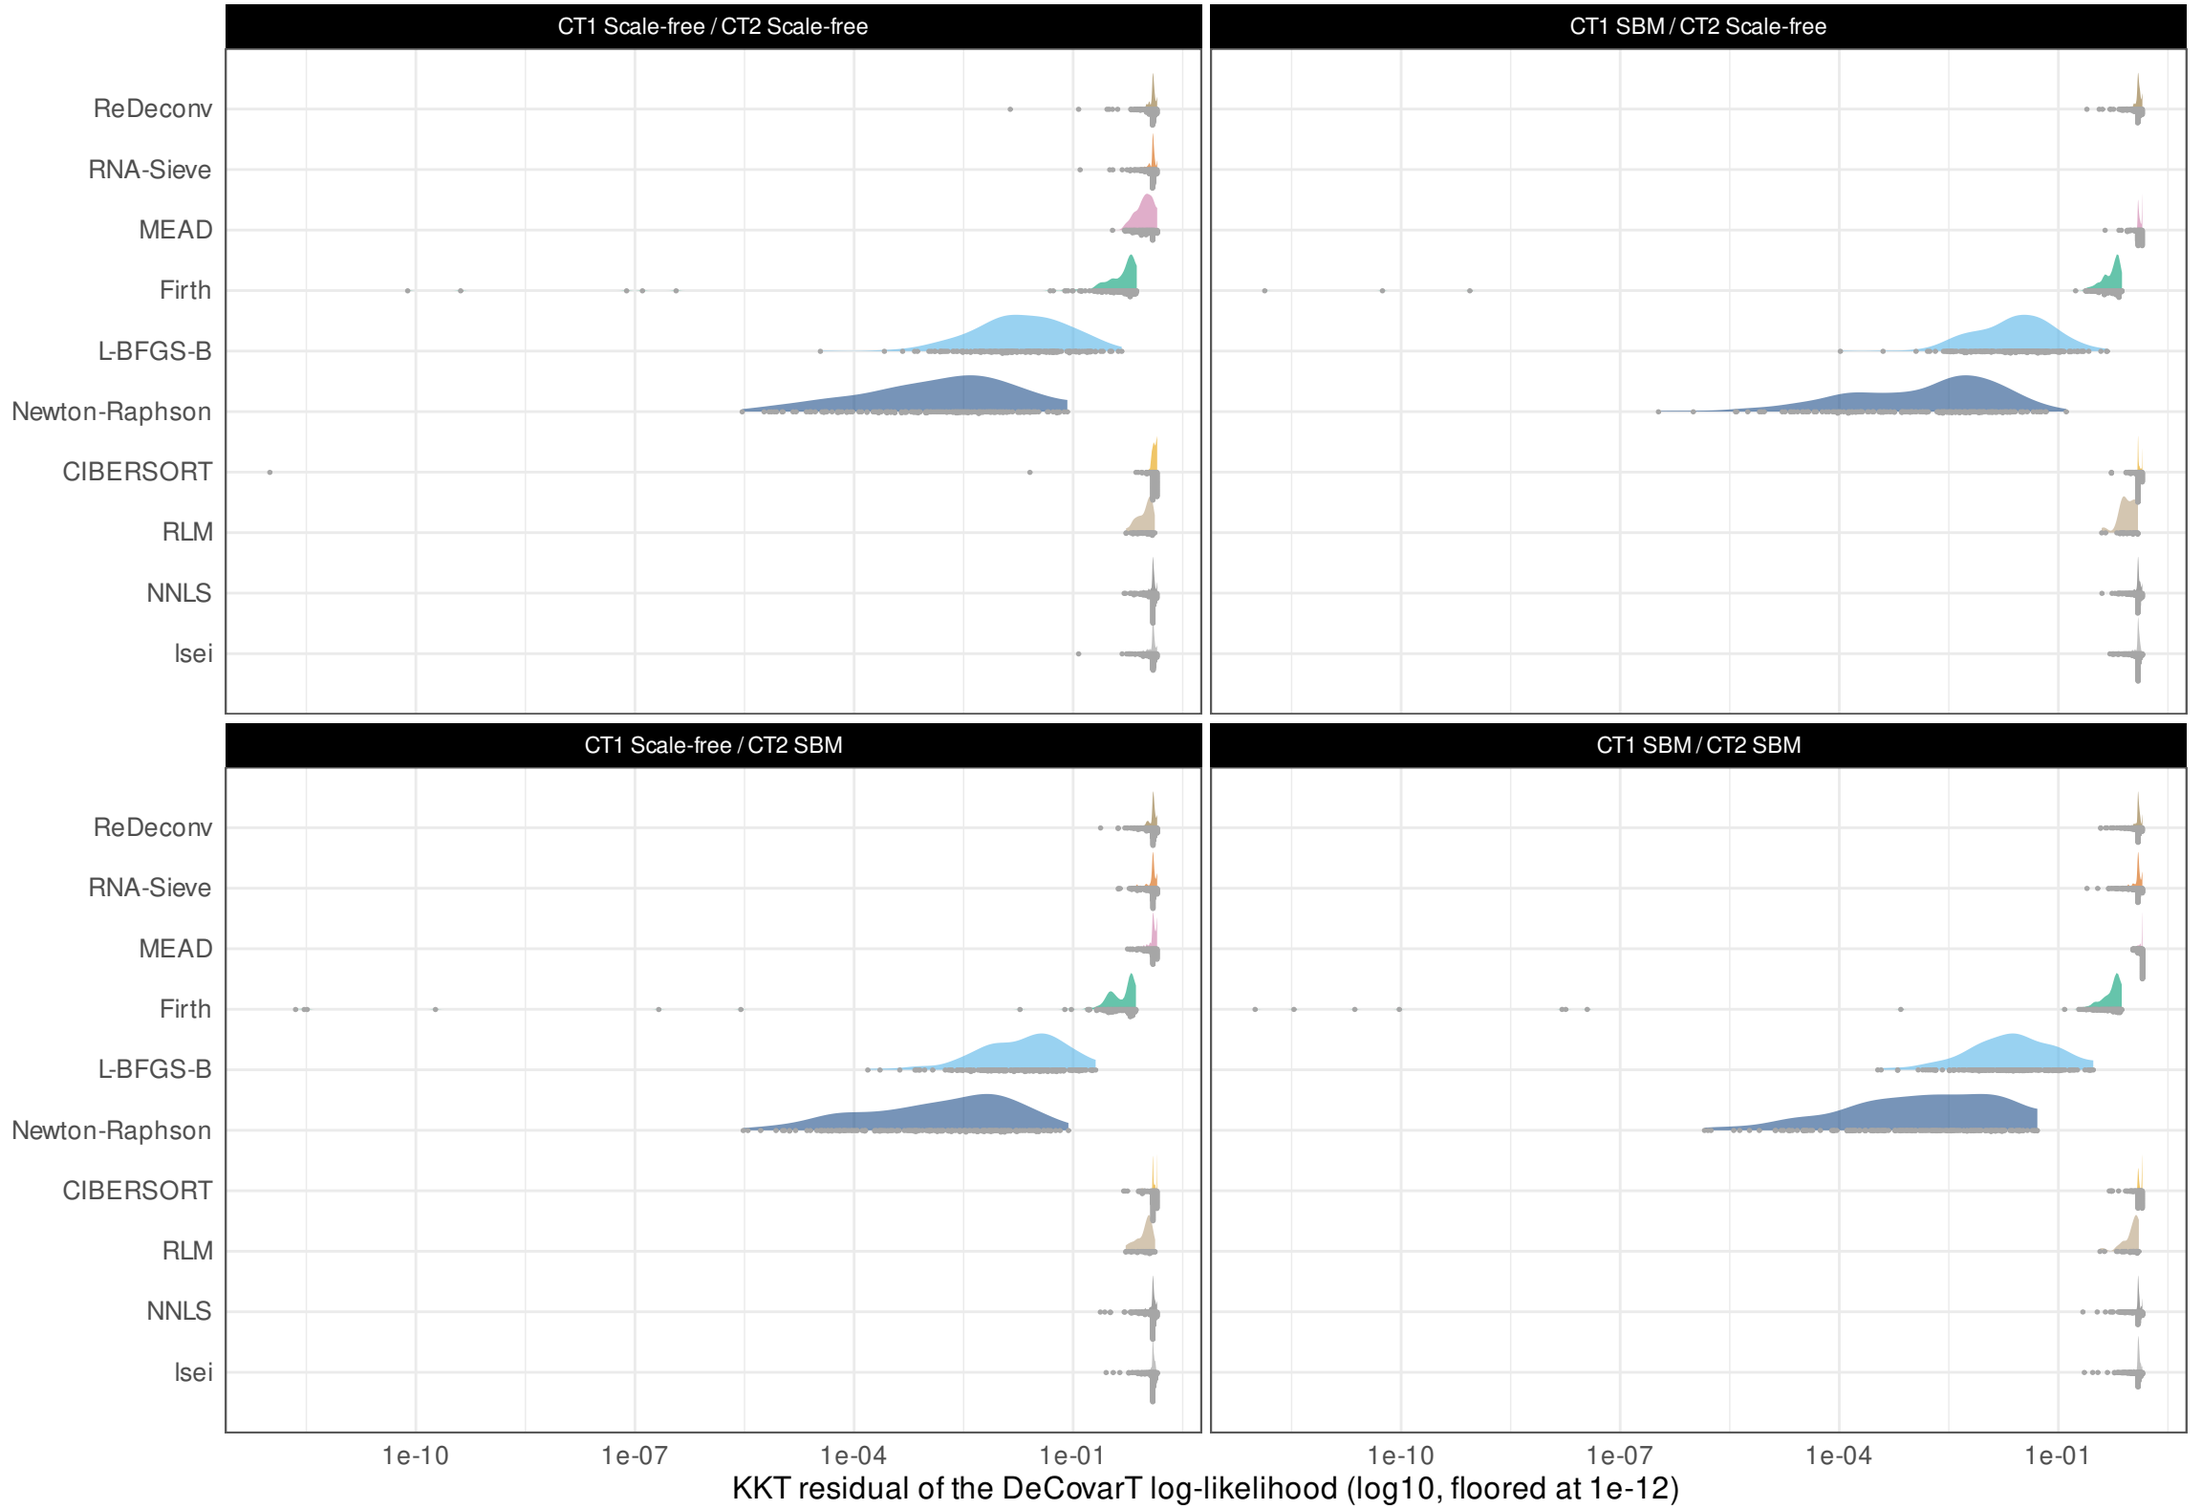

balanced / moderate overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

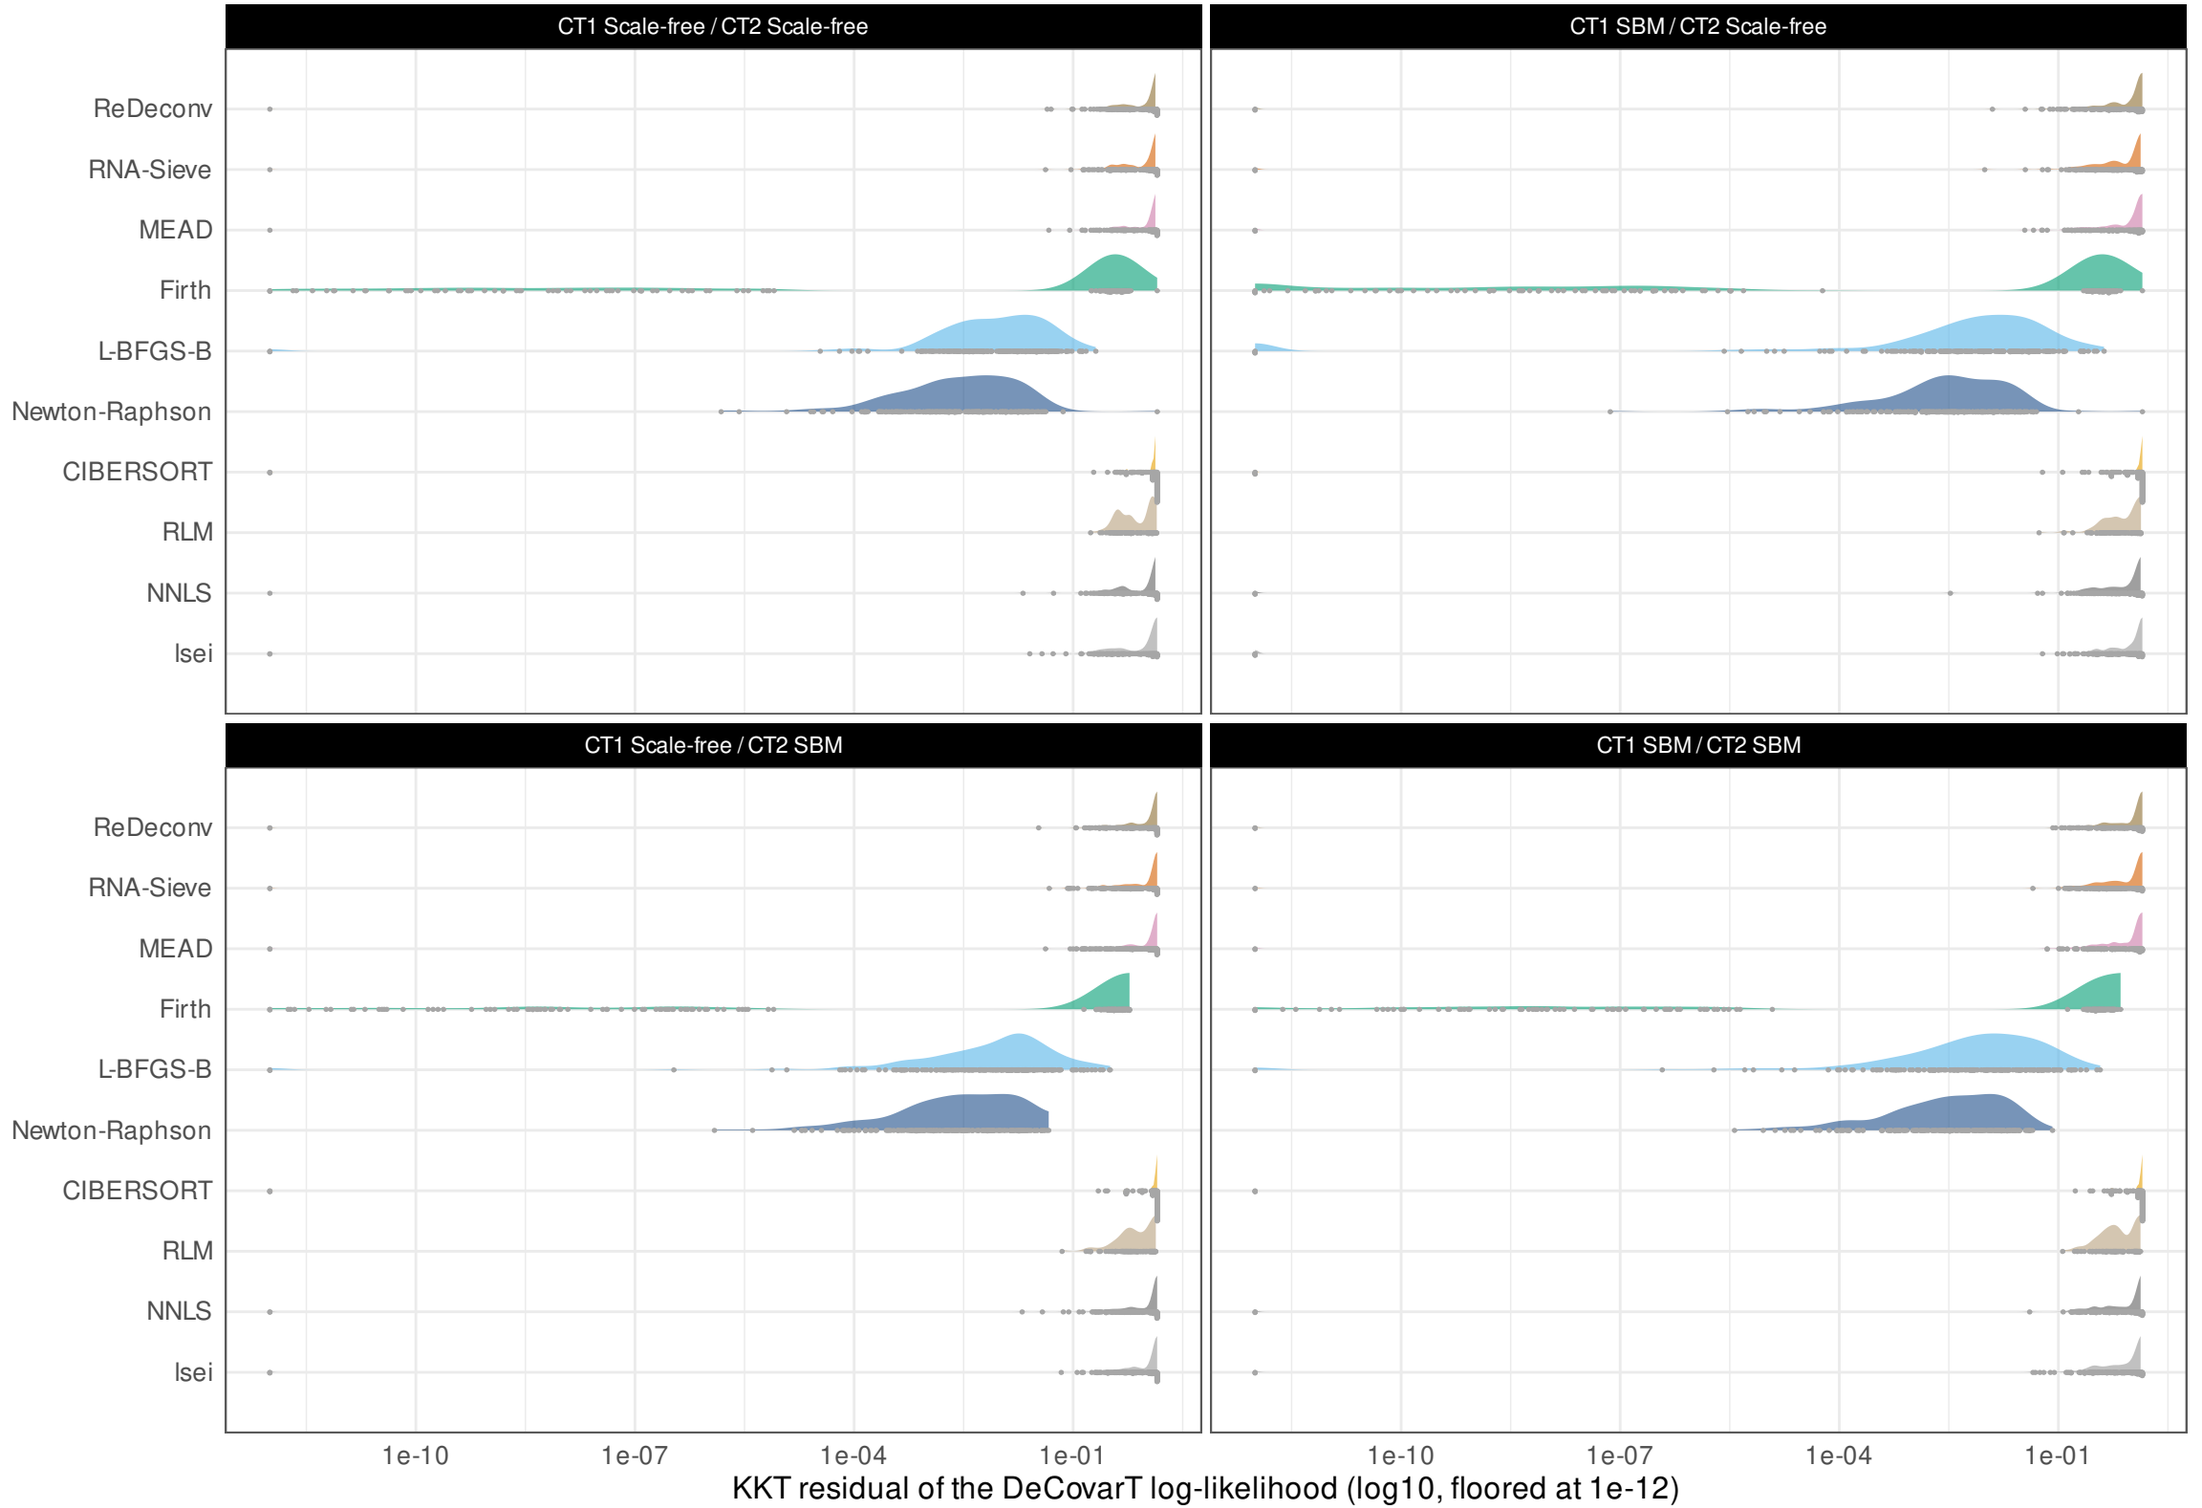

balanced / high overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

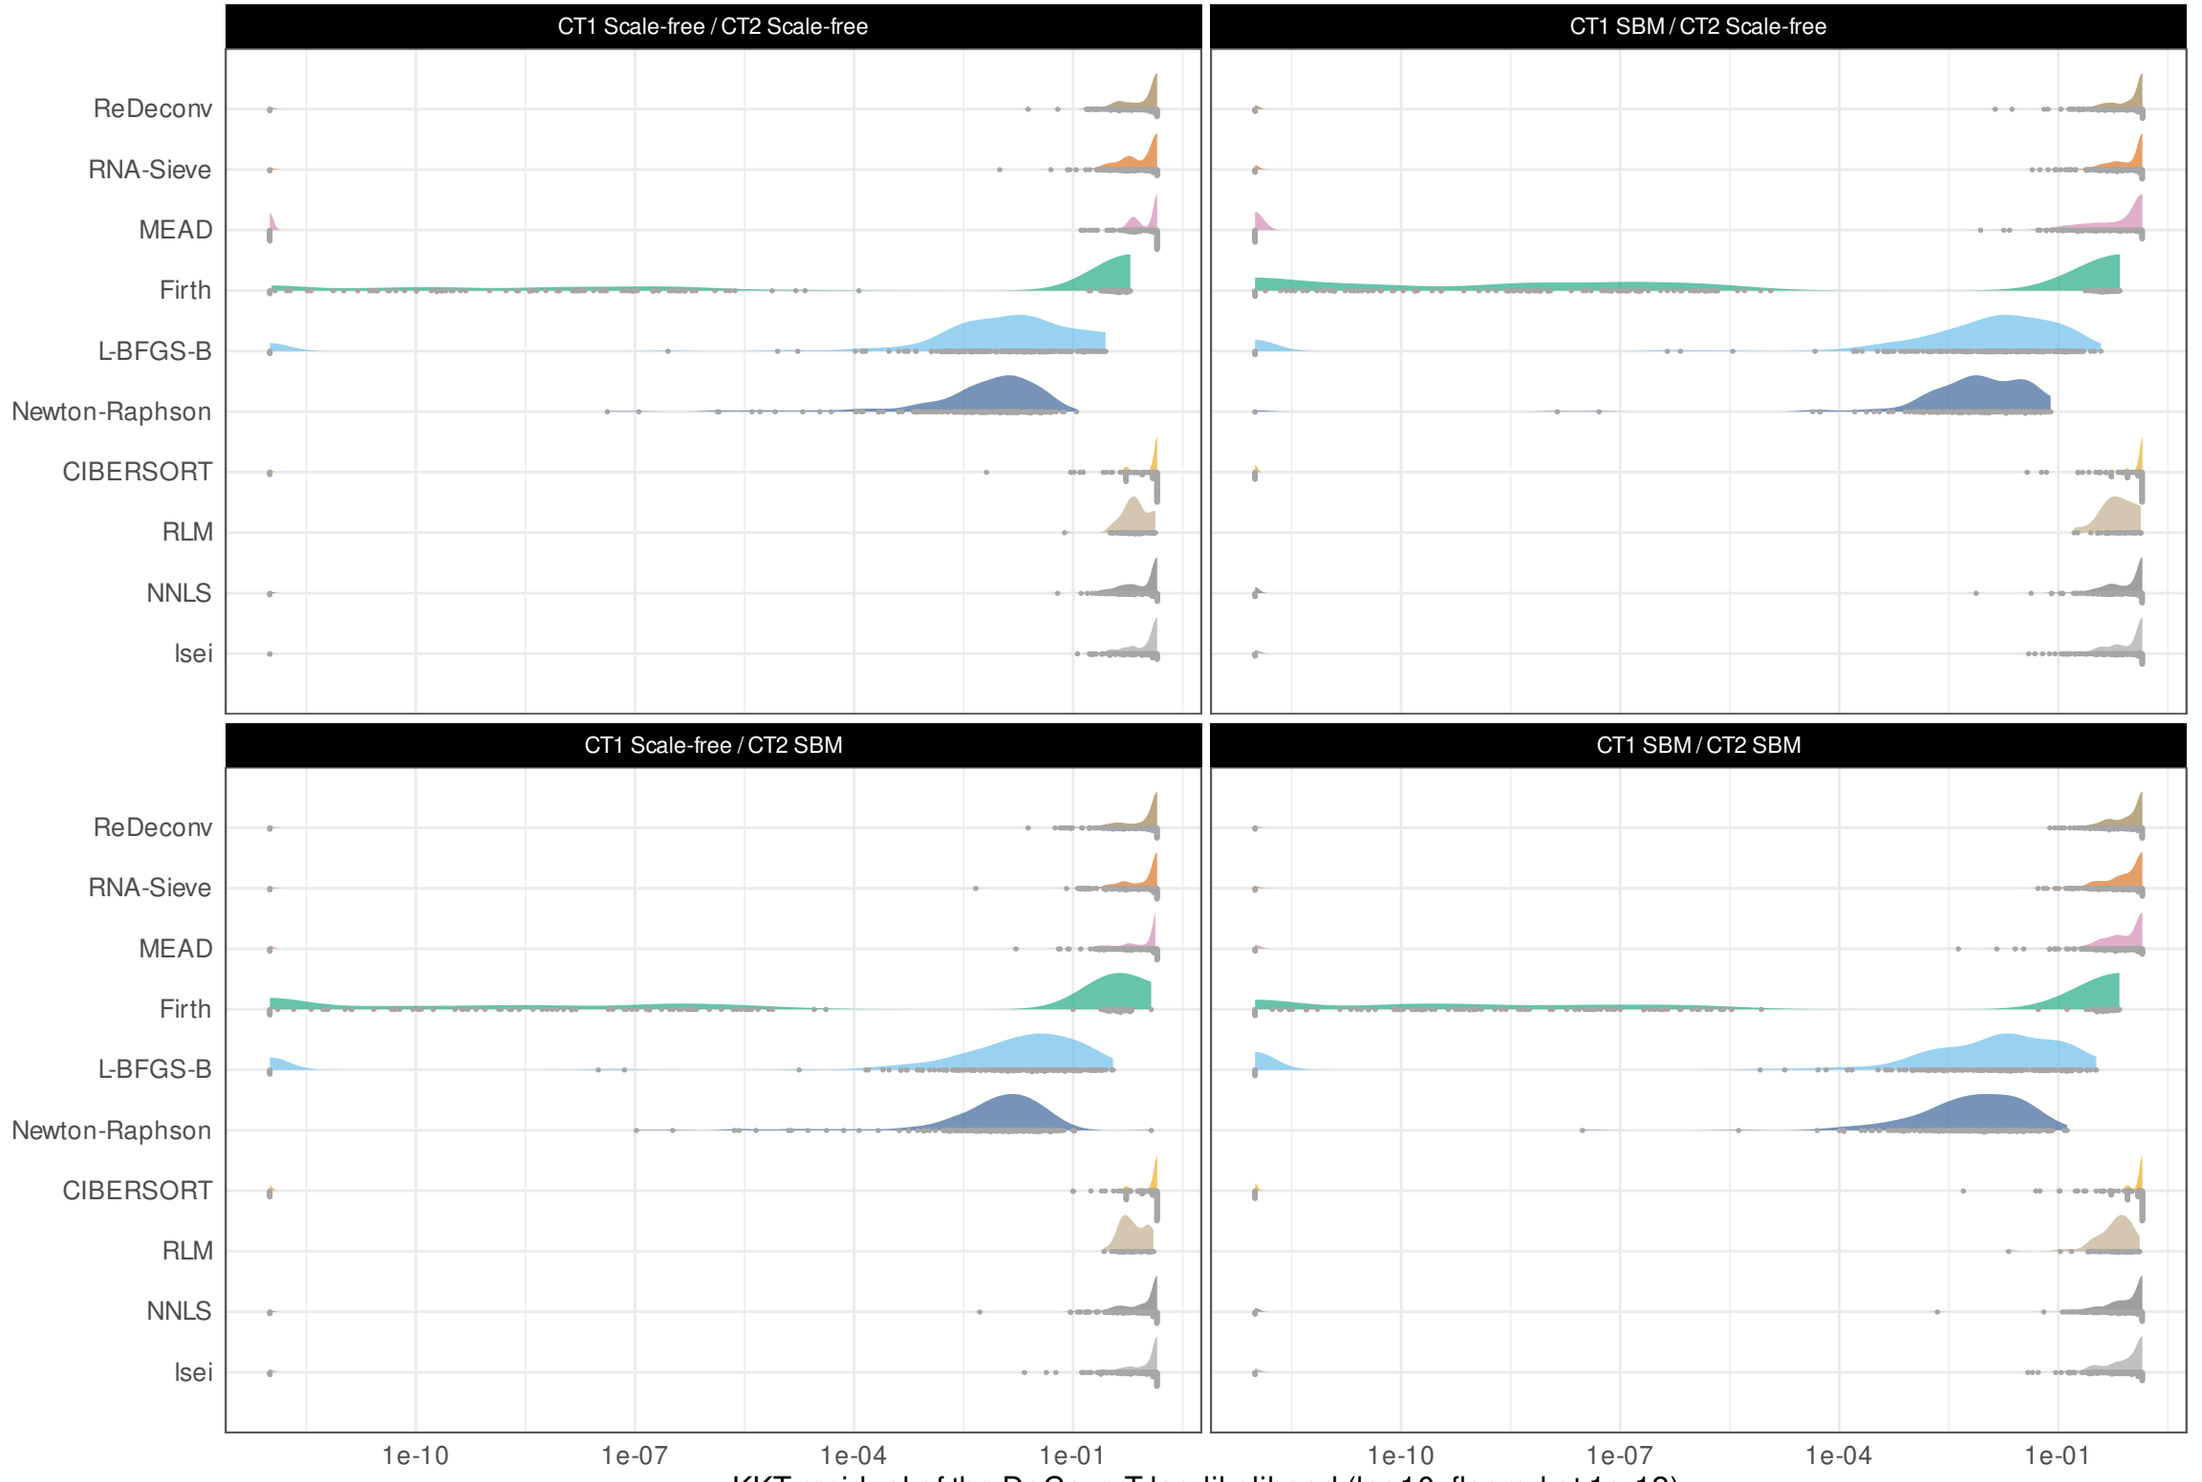

moderately unbalanced / low overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

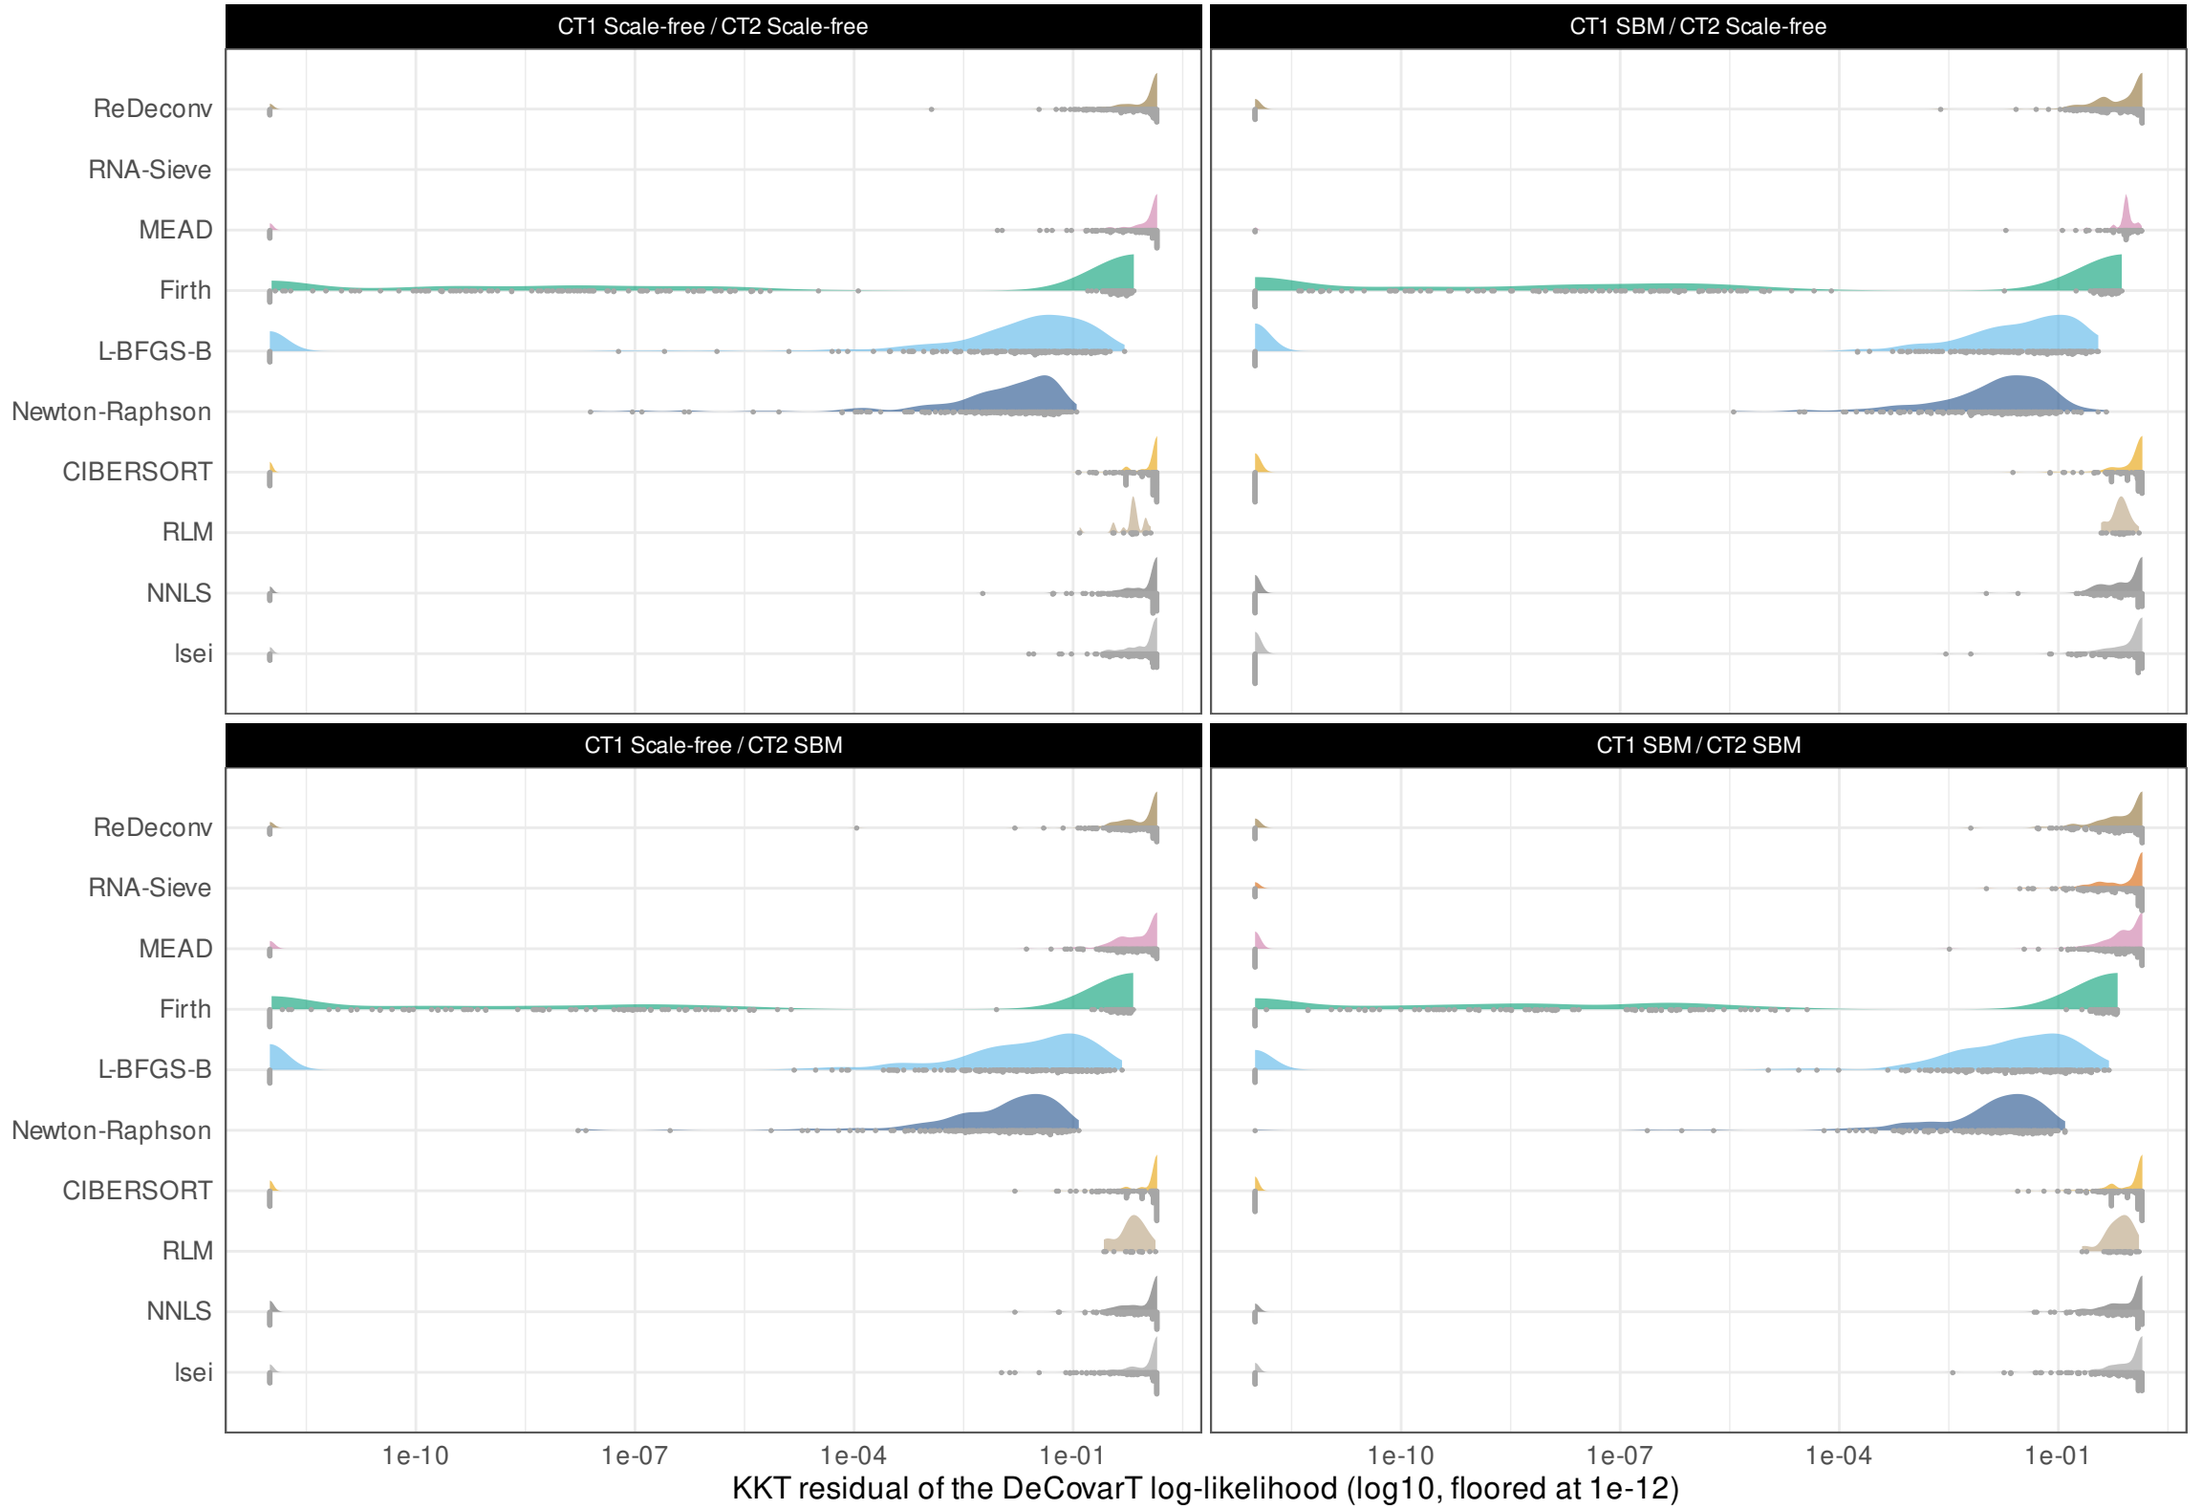

moderately unbalanced / moderate overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

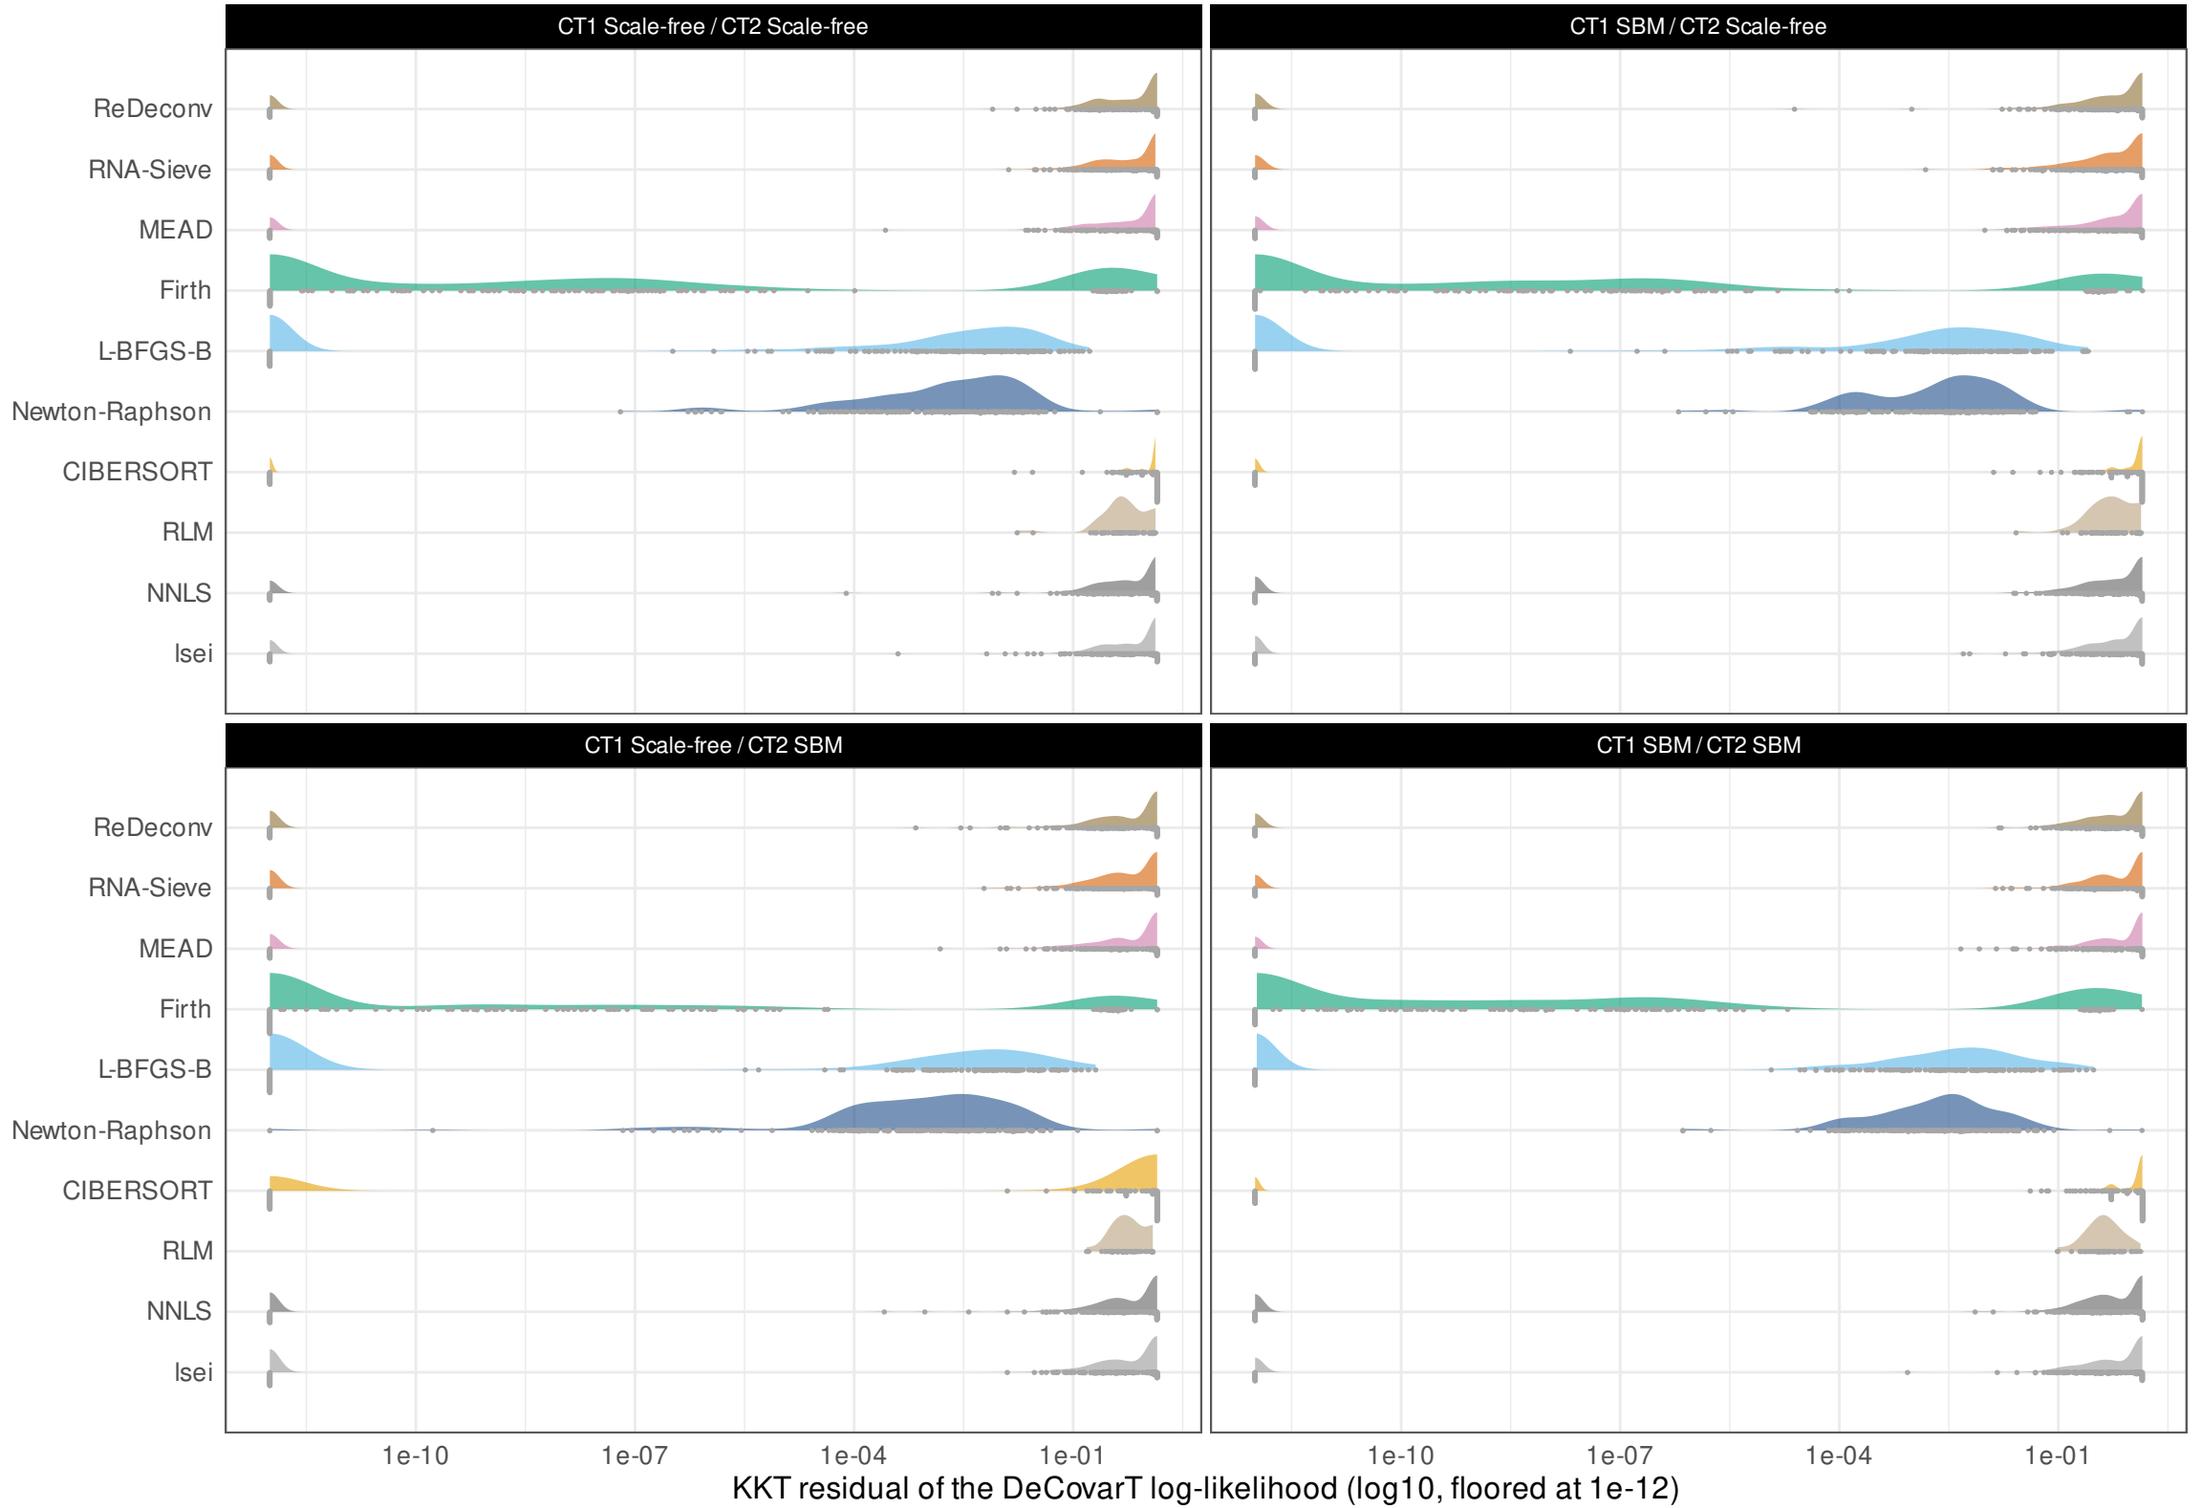

moderately unbalanced / high overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

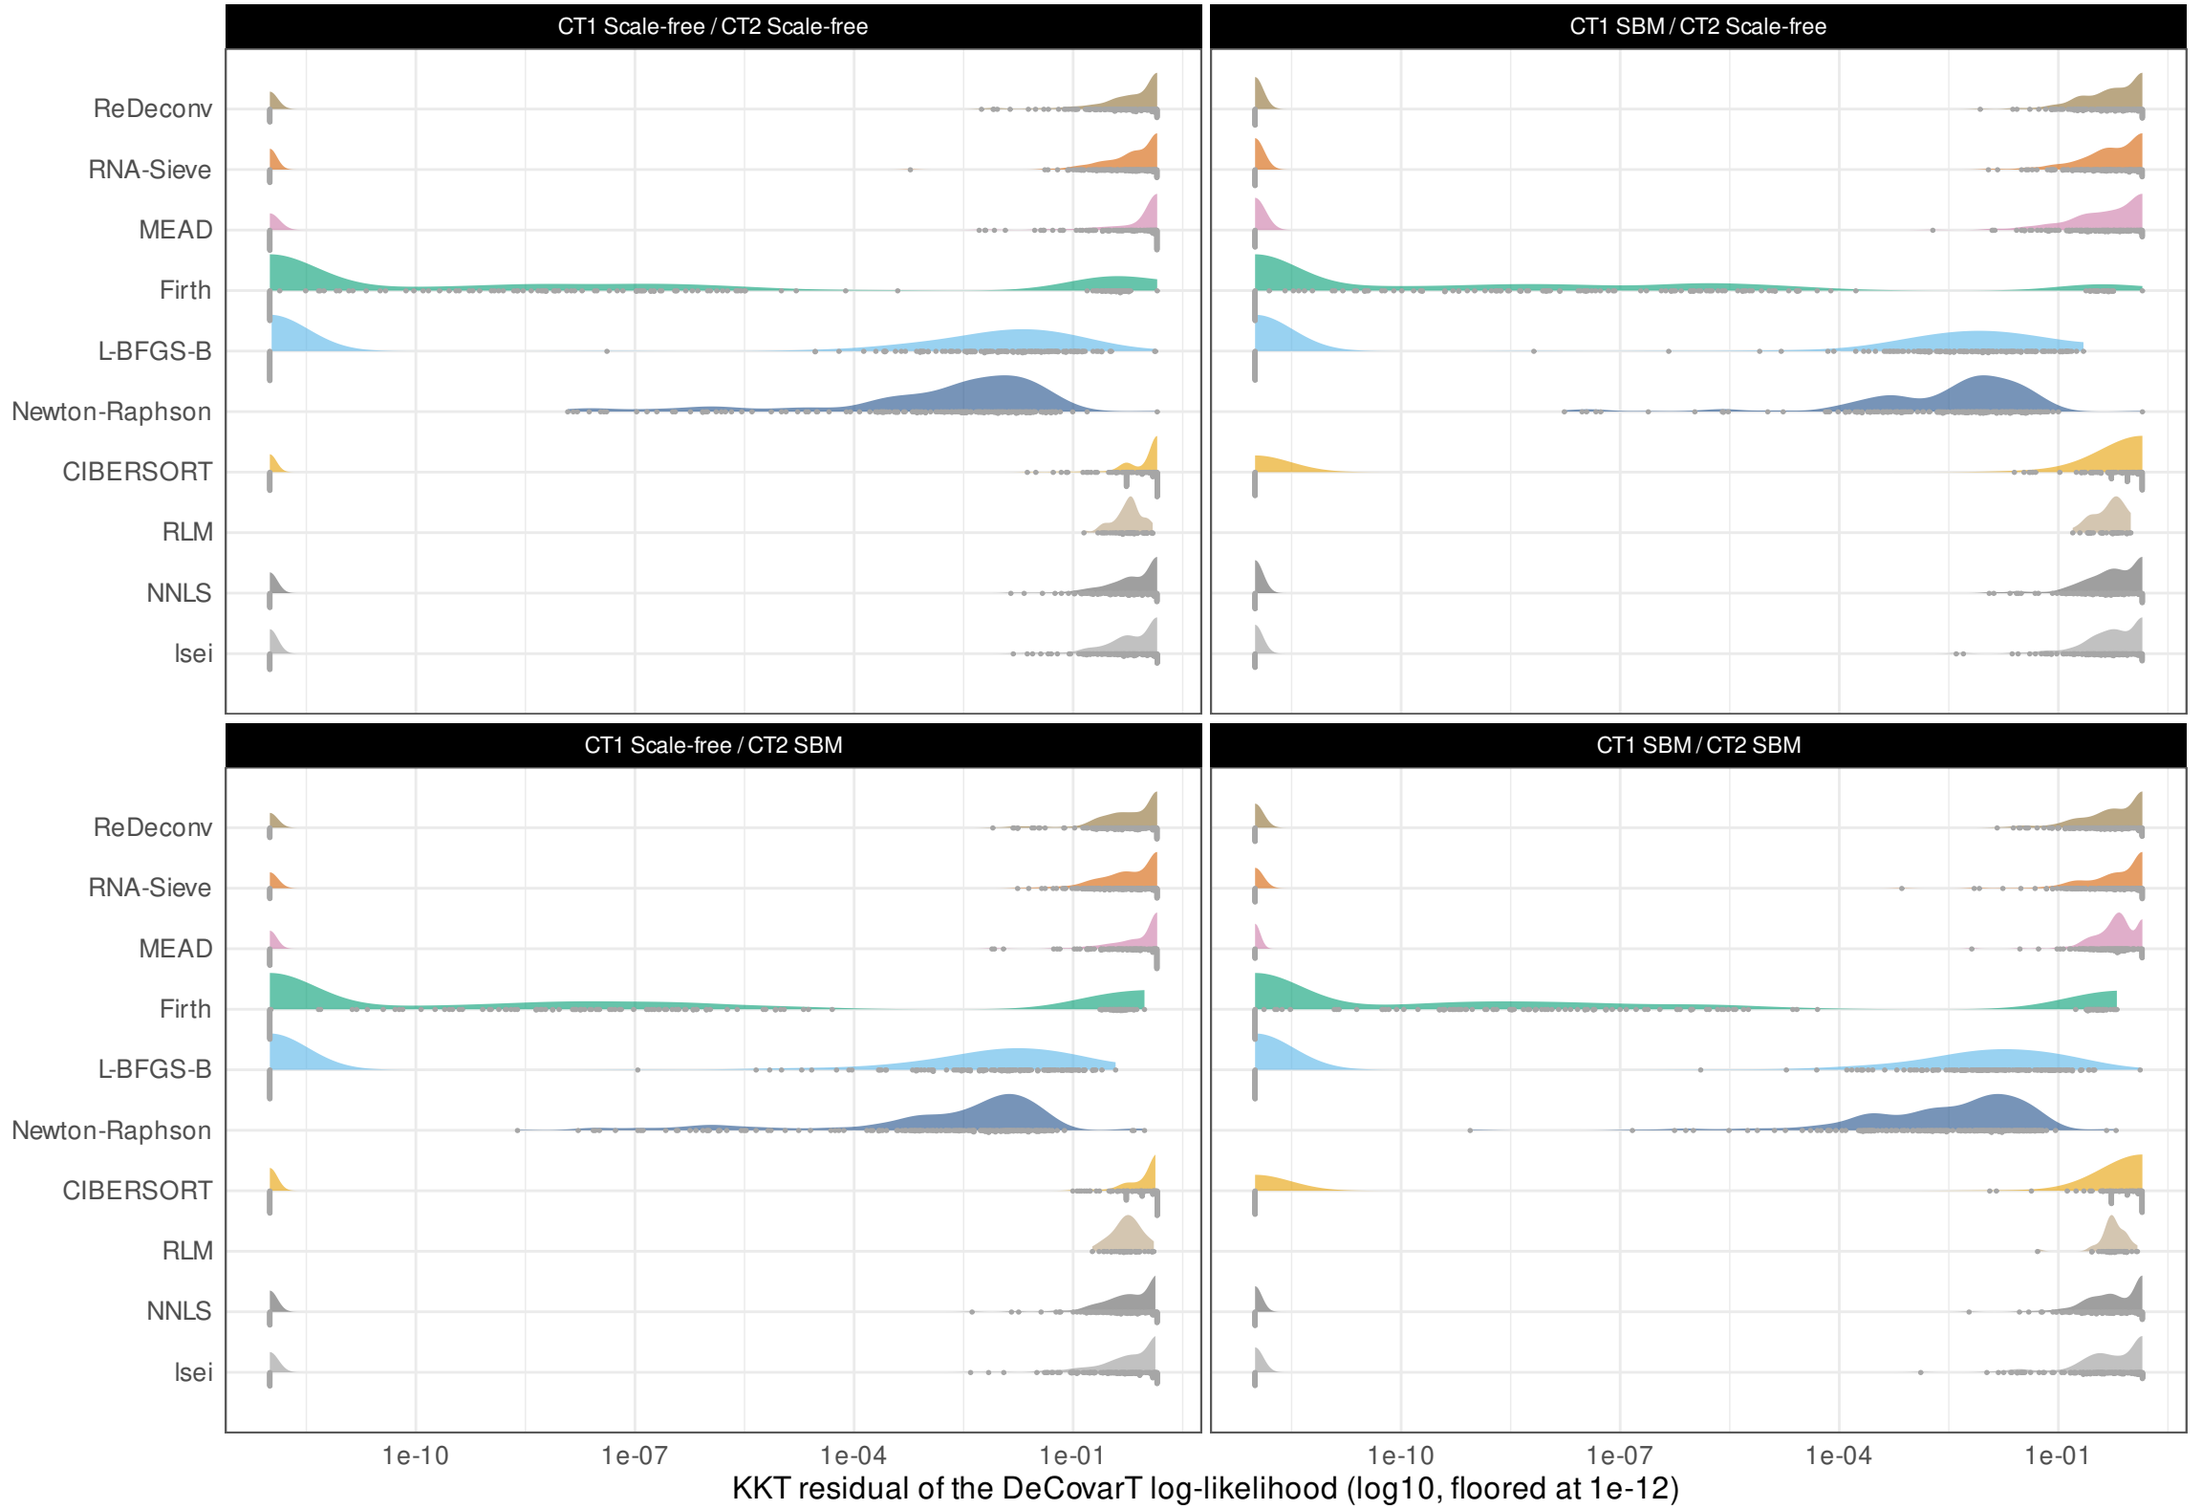

highly unbalanced / low overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

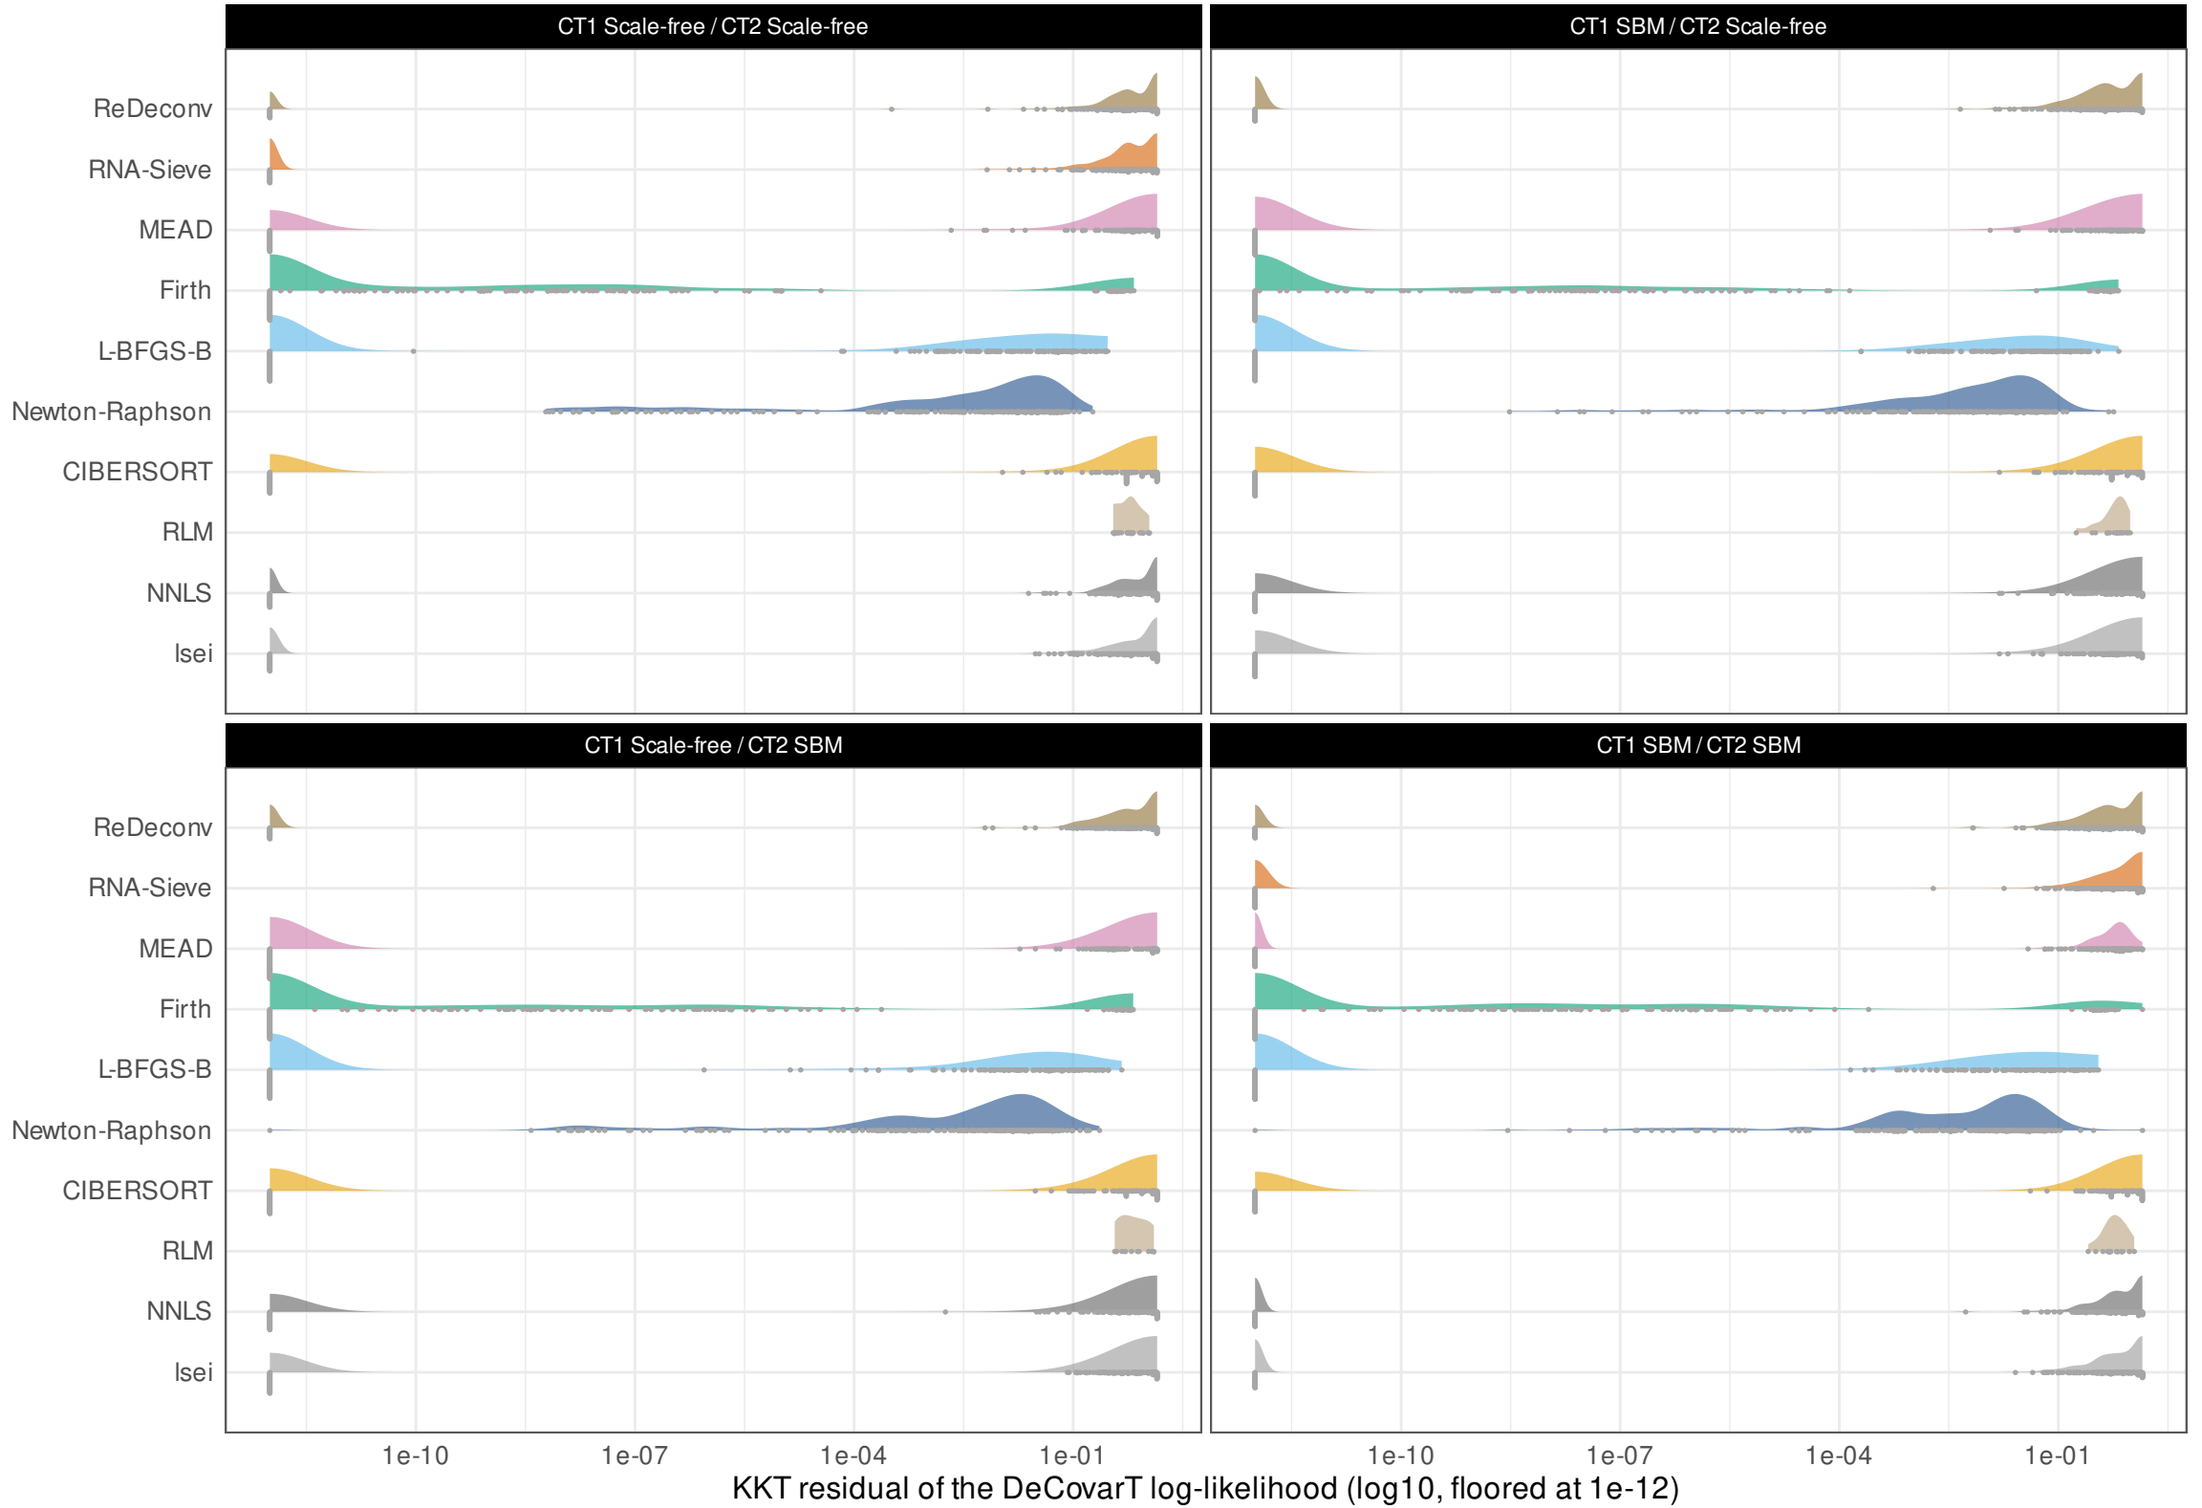

highly unbalanced / moderate overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.

First-order optimality of every estimate

highly unbalanced / high overlap

Projected score at the estimate on the simplex; 0 at a maximum of the DeCovarT likelihood.
